I've mail ordered from Milwalkee AES store several times. Never a
problem.

What's so funny is that there is really no such thing as a "Very simple"
circuit which could be classed as anything even approaching reliable.
Besides it is far cheaper to buy a kit from Veronica
http://www.legend.co.uk/~veronica/ and the reliability and performance of
these kits is second to none.
I would like to take this opportunity to remind you that operation of such
a device would infringe UK law and you could be liable to an unlimited fine
and/or up to two years imprisonment. Use caution..

Regards,
Andy.

Andy:

Rg-6 is THICKER & LESS LOSS, that's why they went to it. IF you can
get RG-11, it is better yet! That's what they use on the poles, but you
have to get the cable guy to put the connectors on the end of it to use
it (same connector plug size that's on RG-6 & 59.) Pole to house, or
Pole to pole. I got a hunk of this from a cable gut that put the conn.
on for me. The connector has silicon in it that is released when it's
crimped! Always use Rg-6 instead of 59 for scanner stuff!

The only problem you might have is the AM demodulator needed in the
225-400 MHz range. 220-225 would be nice, though.

Not to make this sound like we are ganging up, but I suspect this is an isolated incident as well. I have been dealing with AES for 15 years, and have always received great service from the stores I have dealt with which include CLearwater, Milwaukee, and Las Vegas.

Maybe AES should sue you MASA for slamming them. They are a fine company who always promptly sent me exactly what I wanted when they stated and much less than their competitors. Their employess went out of their way to find several items for me, and were always friendly and helpful no matter what.

Before bashing them, consider the fact that it might have gotten lost in the mail!
This happens quite often, I seriously doubt that a large, reputable compay like AES would "take the money and run". Their business thrives on making amateurs happy. They are not in the business of ripping people off, very few ham places are!

Give them a fair shake before going off on them publicly like this. If they did make a mistake, I know they wil correct it promptly.

partially, the aero band now includes 136.0 to 136.975, 25khz steps and AM mode. 137.0 to 138.0 is still satelites, 138.0 to 144.0 is military, at least in the U.S.

>emission.

Maybe if its one computer on the dark side of the moon and the devious
government agency is also there (Vets Admin???????). No way. Too many
VDT's too close together in urban areas, too much cable leakage and
backround noise. No way. From a van with a good antenna parked in front of
your house, maybe. Miles away? What sort of antenna would you have our
mysterious government agency using? We are talking about milliwatts of
wideband RF that looks/sounds like noise. Good luck, and remember, just
because you are paranoid doesnt mean that someone isnt watching you.

The effect on reception, with short cable runs is probably negligible.
Check the radio manual for recoendations. Failing that, I would change
the coax to RG/58 for the receivers. The CB requires 50 ohm coax. If
the cable run is not long RG/8-M should do just fine. This will solve
the poor performance and high VSWR readings. It will also help
preserve the output transisotrs in the CB :).

Sorry Dude!

As a longtime hobbyist and customer of MANY mail-order outfits (goes with the territory in this hobby!), I agree with the others that AES is a top-shelf operation.

Have some mercy...one customer service problem does not make them crooked!

Charlie

This discussion may not be appropriate for this newsgroup, but there is a device that is in fact capable of reading monitors, called the Tempest or something like that. There is more info available at http://www.thecodex.com. I heard about this device about 3 or 4 years ago, so I'm sure advances have been made. Though as TandKMoran mentioned, I do not know how they would be able single out one terminal. It reads right through walls, so I think they could easily have the antenna inside of a "ACME" box truck.

Attention All Scannists,
In an effort to provide everyone with the best knowledge available for purchasing a scanning radio, antenna, book or piece of software, I have created a User Opinions page. This page exists for you to post your personal reviews and thoughts of scanning related items.
I ask each and every one of you reading this message to consider the knowledge and experience you have gained from your monitoring and put it towards helping this effort.
No one expects a thesis to be written. Just your honest comments on what you do and don't like about a particular product. It can take but a few minutes yet make such a large impact to those of use who will make use of it.
To anyone who has ever used the Internet to do research before making a purchase, I think you can see how valuable a resource such as this can be.
Several people have already been unselfish enough to post their thoughts about items they have used. I thank you and hope that others will follow your lead.
To learn more, point your web browsers to

http://www.qsl.net/n2mca/OPINIONS.HTM

Thank you for your time and consideration!

Strong signals,
Rich N2MCA http://www.qsl.net/n2mca/

I've had nothing but GREAT service from AES, year after year. Seems like
you came across an isolated incident. Call someone high up there, I'm sure
they'll straighten it out. Why would AES need to bring your order to the
Post Office? Doesn't everything efficiently leave there via UPS?

Yet you yourself use spamming tactics on purpose of selling your goods.
Isn't it a contradiction? Adds like yours should go to *forsale groups.

Your "net-fame" is well known to many readers of van.general,
the group which was flooded with your junk the last year. Looks
like you became a little wiser since then (after a couple of ISPs
pulled a plug on you because of complaints?) but you need to
become wiser yet.

30. 46 MHz best antenna length

Newsgroup: rec.radio.scanner
Date: 1997-07-01 00:00:00 UTC
From: tw <twine@intrex.net>
Message-ID: <33B9D116.534@intrex.net>
Source record: 192820

To all,

I've read a couple recent posts that boast the RS #20-014 six foot antenna pulls in cordless calls up to 2 miles away. If others have had this success please let me know! I'm using the RS #20-013 discone on the roof and have never been that happy.

I bought it as a newbie to scanning and then months later talked to a knowledgeble RS manager (I know, it sounds impossible) that told me the problem. I had carried in a copy of Grove's catalog and he pointed out the difference in the one they sold. RS discones have no vertical element! We spent half an hour trying to calculate the length needed for the 46 MHz range and I'm not so sure we got it right. We used a formula I don't remember that divided the freq by some constant?!

Anyway, I added the verticle element with my best calculations.

My questions to all are:

1: What IS the exact length needed?

2: Should I just replace the whole thing with the six footer?

TEMPEST is a DoD (Department of Defense) term. It is used in the
context of certifying a communication/data encryption/computer terminal
free from secure/unsecure RF emissions. A system that is secure capable
```

must be TEMPEST certified. There are varying levels of certification, depending on the sensitivity of the data involved.

Being a crypto maintenance technician I have to agree with the quoted post above stating that it would be almost impossible for a van parked next to your house, much less a few miles away to pick up any intelligent data. Now a "bug" within about 2-3 "feet" would be able to pick up on the video signal. This bug would be quite expensive. Not something you are going to buy, or put together in your basement. (governments, big business would and do have such devices) But unless you are a major felon (i.e.. drugs dealer, terrorist, spy, hacker), I don't think that the government would be interested in your "Young Asian Pussy" downloads. (grin)

Source record: 192928

Well, the Cleveland frequencies are in fact there. You can get a listing of them in Police Call for Ohio/Michigan (Radio Shack). However, the reason you do not hear any voices on these frequencies is that they are all digital. The old system was an analog repeater system, no trunking. New system is totally digital, trunked. That's why all you hear is the "diesel" sound of the handshaking channel(s), and the digital "hash" of the digital voice channels.

They pulled a fast one on us. Reportedly though, they will revert back to the older system occasionally while they get the bugs worked out of the new system.

Source record: 192935
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.cb

I recently took my antenna tower down for some work. I am considering some new coax for the 3 scanner antennas, and 1 CB antenna on it. My question is which coax is best to use for each application. For the scanners, which is best to use the RG6 or RG59. As I understand the RG6 is 72 ohm coax and scanners should use 50 ohm cable. The cable run from radios to antennas if less than 50 feet. What's the better choice ? I've been running on RG6 and it seems ok, but since I have the tower down, should I change it ? (I initially took it down because I had RG6 coax on the CB antenna, then noticed poor performance with it, and was advised that it shouldn't be used that due to the 72 ohm value creating very high SWR readings.) Any suggestions would be appriciated.
Thanks in advance.

I have an old GRE Super-Converter hooked up to my back-up scanner, a Bearcat 210-XL, here in my office.

I don't listen to cellular, but use the converter for the Los Angeles City FD, which uses a non-trunked 800 Mhz system.

The converter works great! All LAFD transmissions come through full quieting and its easy to use. I use a BNC "T" connector so that I can hook up one side to the converter and the other to the roof antenna. Works fine with seemingly little insertion loss.

FCC License Data Sources
Bill McFadden
billmc@agora.rdrop.com

Changes preceeded by "|". Please e-mail corrections and additions to me.

INTRODUCTION

This is a list of FCC license data sources available to scanner hobbyists. The FCC master contains a wealth of data about every non-government license in the United States (over three million records). Most of the sources listed contain a subset of this data, although a few contain all or nearly all of it. Government licenses are not administered by the FCC, and the data is not available to the public.

Also available are subscrition services from companies like ISI and CET. Since they charge by the minute, they are not really practical for the hobbyist and hence are not included in this list.

Prices are rounded to the nearest dollar and include shipping, if known.

C.E.T.

CET sells records of all stations inside a 30-mile radius for $80. (Major cities cost extra.) A 70-mile search costs $178. The data is provided on floppy disks and is available in ASCII columnar and comma-delimited formats.

CET does not provide data for licenses that do not contain specific geographic coordinates (i.e., mobile-only systems) or specific operating frequencies (e.g., amateur radio).

To do the search, CET requires the latitude and longitude of the center of the 30-mile radius. I calculated mine from a USGS topographic map I obtained at a local nautical supply store. Alternatively, you can obtain the coordinates for your town from the University of Michigan's geographic name server. Run "telnet 141.212.99.9 3000" and enter your zip code. For my area, the server returned the coordinates of the main post office.

CET can be reached at 800-445-0297.

| FCC
|
| The database is also available from the FCC for free. It covers most
| services but not all. Sections can be downloaded, processed with a
| supplied Visual BASIC program, and viewed with Microsoft Access. The
| entire database is approximately 3 GB in size. See:
|
| http://www.fcc.gov/oet/info/database/raeddf.html

GROVE

Grove sells FCC data on CD-ROM and floppy. The CD-ROM covers the entire US and is available with or without mapping support. The mapping version brings up a map with the requested station plotted on it. The regular version is $104, and the mapping version is $174.

Floppies are available by state for $44 per state (add $10 for CA, FL, TX). The disk comes with a database search program. Grove Enterprises can be reached at 800-438-8155 (voice) or http://www.grove.net/ (WWW).

MICROFICHE

The Bearcat Radio Club sells the FCC master by state for $15. Bearcat Radio Club can be reached at P.O. Box 291918, Kettering OH, 45429.

PERCON

PerCon sells FCC data on CD-ROM. The Spectrum CD covers the entire US and comes with a simple database search program. Regional CDs cover subsets of the US but come with a more powerful database manager and provide more detail about each license. Also available is a Ham callsign and repeater database CD.

Spectrum costs $37, and the Ham and Repeater Database is $22. Regional CDs are $137 for the first CD, $102 each additional CD ($560 for the entire 6 CD set). Data is updated twice a year. PerCon can be reached at 716-386-6015 (voice), 716-386-6013 (fax), support@perconcorp.com (email), or http://www.perconcorp.com (WWW). The Spectrum database can be searched free of charge via Percon's WWW page.

POLICE CALL

This is probably the most cost-effective source of public service license information. The detail is limited, but the information that is there is often more useful than the FCC master. For example, an entry in Police Call that reads, "Portland Police, Net 3, North Precinct," reads, "Portland, City of" in the master. Police Call has been recently renamed Beyond Police Call and now includes a limited selection of business listings.

Police call is available in 9 volumes covering different regions of the US. It can be purchased at Radio Shack stores for $13 per volume.

RADIOMAP SERVICE

Developed by long-time Usenet contributor Bob Parnass, this service provides a custom report of frequencies, callsigns, and licensee names for a specified area in any of the 50 states. Coverage areas of 4 to 256 square miles will be chosen by Bob depending on transmitter site density. Standard and deluxe reports are available. Both reports include a color plot with transmitter sites marked. The deluxe report adds a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area.

To create the report, Bob requires the latitude and longitude (or nearest street intersection) of the center location. Standard reports are $29.95, and deluxe reports are $34.95. Write to Bob Parnass at 2350 Douglas Rd, Oswego, IL, 60543, or call him at 630-554-3839 between 6-10 PM central time.

SCANWARE ASSOCIATES

ScanWare Associates has developed a PC-based database program called the FCC Frequency Retrieval System. FCC data for all states is available, covering all services and all frequencies. Current data is for first quarter, 1996.

Scanware has chosen to discontinue developing this software, but the good news is that the software and data are now FREE! It is being hosted by the West Virginia Educational Network. See:
http://www.wvsc.wvnet.edu/~fcc/index.html

APPENDIX

Here is table of data fields in the FCC master. Fields provided by various products are indicated by "#" or the field length, if known.

One of my photographers told me that a local cop told him about a guy who claims to be frequently visited by a 6 foot penis. He claims the giant penis tells him where to go and what to do. He frequently gets "sent" to people's homes. One time he showed up naked at someone's front door ringing the door bell. When the lady of the house opened the door, there was this naked man standing there saying that the giant penis told him to come over for sex.

I'm not kidding you, this is a real story.

Does anyone know which scanner was the one where if you did a certain keypad trick, a special secret message would scroll across the display?

Was it the Sportcat?

I remember reading this in either Pop Com or Monitoring Times a few years ago, but forgot which scanner it was, or what the keypad trick was.

Actually, both coax cables are 72 ohm. I am not that familiar with the RG6 but the RG59 is what is commonely used in cable TV systems. Most communications antennas are 50-52 ohm impedance so if you were to use that type cable, you would need some sort of matching transformer on each end (radio end and the antenna end). Depending on your circumstances, you may or may not see a difference in performance using 72 ohm coax vs 50 ohm coax on a scanner. Recievers are not nearly as critical in this regards as transmitters are. However, you mentioned a CB antenna also, and I would most definitely go with 50-52 ohm feedline for that. Depending on the length of run, I would go with RG8 or RG8U coax. You mentioned something about a 50' run, I wouldn't run RG58 any more than 20 feet because of the losses involved.

62. BC 3000 XLT Battery Recharge

Newsgroup: rec.radio.scanner
Date: 1997-07-01 00:00:00 UTC
From: rwt2@netcom.com
Message-ID: <33b9fbc7.342041398@nntp.ix.netcom.com>
Source record: 192948

I bought the 3000 two weeks ago. I like it OK, but I'm not
sure I like the battery pack. I liked my old scanner with the four AA
batteries because if I forgot to charge my NiCads I could easily slip
four alkalines in it. I purchased an extra battery pack (Back Order)
for my 3000. My owners manual says to charge the battery while
connected to the radio. I bought the extra battery so I could have
one charging while using the other. Is it really necessary to have
the battery connected to the radio to charge it. If so, it defeats
the purpose of buing the second battery.

Be sure the scanner you use this with can change the step size to 30KHz steps for the range you are searching. I bought one and use it on my PRO-2036. It works OK except my scanner steps at 12.5 through this range and I miss most of the active frequencies. Had I thought this through before my purchase I probably would have waited to see if there is a mod that can change the step size. Hope this helps.

Randy

64. ANYONE been to the Los Positas College Swap Meet on 1st Sunday

Actually, RG-59U used to be used in cable TV systems, but the industry
switched to RG-6 because it is better shielded than RG-59U.
Using RG-6 in a cable system will reduce unwanted leakage both
into and from the system.

Jack O'Connell (forester@usit.net) wrote:
: I will be bringing my new scanner to the Pepsi 400, and have several
: questions about scanning at a race.

: 1. If you scan more than a couple of cars, how do you know who is
: who? I don't want to spend more time watching the scanner than
: watching the race.
Use the car number for the channel number location of each frequency that
you wish to listsen to.

: 2. Are the NASCAR frequencies worth monitoring? Which ones? What
: kind of info comes over them?
I think that 464.5000 is race control.....Kind of nice to listen to if a
car starts to smoke or to find out if someone is speeding on pitroad. I
program all of the NASCAR frequencies in my scanner and then lock out the
unwanted channels.

: 464.5000, 464.9000, 464.7750, 464.0250, 463.8500, 461.2000, 463.6250,
: 468.2500, 461.2000, 463.6250, 463.8500, 465.0250

: 3. What is on the MRN Radio frequency (454.0000), their entire
: broadcast?
Yes it is the entire broadcast. You may also search for the local
stations RPU transmitter freqency. In Charlotte it is in the 161mhz range.

: 4. What is on the ESPN frequency (450.3500)?Can't answer this one.

: In other words, what is the strategy for scanning, without spending a
: lot of time messing with the scanner (all of my spare time is spent
: reaching into the beer cooler)?
One of the better thing to try and find is a leg strap.....This can be
purchased from one of the scanner trailers at the track (Racing
Electronic is one that comes to mind but there are two or three others.)
This will allow you to be able to see the display screen of the scanner
while seated and keep you hands free for the beer and chicken.:) I
recommend the 2 inch wide strap. I have a 1 inch wide strap and it
sometimes feel like the scanner is starting to slide down my leg.

Enjoy

Tom

So do you want to listen to the voice from these pagers or do u
want to read the data. If you want to read the data, you have to build a
decoder. I saw one in a magizine once (I think it was Popular
Communications, but I dono). If you just wanna listen to the voice, then
just tune in the pager freqs with your scanner. Common ones are 152.24
and 152.48. PLease reply via E-Mail, not news.

> GradyGrady,
I aggree with Rich that you would want a weather radio, but if
you just want a scanner, I have one. It is a PRO-38, 10 channels, works
gud. U could program all of the weather freqs if u wanted. If you want, I
will program all of the weathyer freqs and then send it to you for $50.

>
> So many question for a person that knows nothing about a trunk......Whoa.
Your scanner won't get trunks. To figure out if you need trunks,
you could goto radio shack and ask them, but personally, I think they
should change their motto to "You have questions? We have no idea!". Goto
radio shack and buy a "Police Call" for your area. Look under your
city/county and see if there are "T" frequencies up around 800 MHz. For
example, u mite c this:
(of course u wood c your town's name instead of AnyOldTown)

AnyOldTown
AnyOldTown T 808.9875 WPHY1111 500
AnyOldTown T 809.9875 WPHY1111 500
AnyOldTown T 853.9875 WPHY1111 500 1 MR
AnyOldTown T 854.9875 WPHY1111 500 1 MR

If you see 800MHz frequencies listed for your town county, then you need
to get a new scanner that will scan 800MHz.
WAit a sec, u wanted to no what a trunk wuz, didn't u.. I would
tell you, but it would be much better if you would read about trunked
systems in the front of the "Police Call" book u r going to buy. That is
where I learned about trunks anyway, so u could learn more from it them
from me. One thing. If your city/county's trunk is more then about 5
channels (each frequencies listed with a "1 MR" is a channel) then you
will need to get a trunktracker to listen to it. sorry if this message
stinked.

Both RG6 and RG59 are 72 ohm coax!

Use RG8 (the best for the money) or RG 58
Both are 50 OHM.

The pros are fairly obvious. The disadvantage is that you cannot scan,
say, 460mHz, at the same time you are using the converter. A minor con,
and really doesn't detract from the usefulness of the unit.

I have recently obtained a Radio Shack PRO 37 Handheld scanner. It has all the mods that are published, however I am curious if anyone knows if this scanner can be somehow modified further to receive frequencies between 200-370MHZ?? The current range of the scanner, according to the bakc label is 30-54, 108-136.975, 137-174, 380-512, 806-823.9375, 851.1125-868-9375, 896.1125-960MHZ (again, the cell mod was made and works fine). I am looking to include the gap between 174-380MHZ..
Anyone have any ideas/knowledge of how to do it or if it can be done with this radio?
Thanks
john

Ian,
The PRO-60 has not been recalled like the Pro-26 was. It is being
discontinued to be replaced by '98 models.
The only cell a US model will receive is very weak images in the
130-142 MHz range.

I ordered one small accessory through AES (Amateur Electronic Supply).

It took them three days to respond to my order. I didn't receive
the product. I called the office a week later. They told me that
they placed the order and they needed someone to go to the post
office.
Now, they tell me that they don't have any records of my order.
I have received nothing. It's two weeks now.
Beware of AES.

By the way, I purchased a radio through Radio City and I am happy with
their service.

I am very much a scanner newbie. I took a look at the specs and did several hours of research for the BC235XLT and it looks like a great scanner. It was recommended to me by several people on this newsgroup. It has a lot of banks,channels, triple-conversion, 300 channels (in 10 banks), can handle trunked systems, and lot of other features that look great. I know it has a jack where I can plug in a tape recorder, and a jack for earphones, two battery packs that last up to 9 hours each, and a lot of other accessories. The lowest price I found was 270 dollars.

I was planning on purchasing it from Radio Guys (http://www.radio-guys.com/scanners/2bc235rg.htm). They have a 30 day unconditional money back guarantee. Since I've never used a scanner, and as I mentioned before am very much a scanner newbie, I plan on thoroughly using the BC235XLT for several weeks to make sure it's really worth my money. If I find that there's not much I can hear, or it isn't worth the 270 bucks, then I can return it (I called the dealer and they said no one so far has returned this model). I hope I won't be disappointed.

I would really appreciate it, if anyone who has any thoughts on the BC235XLT (+ or -) or on the dealer I'm purchasing from (Radio Guys), could post a response. I appreciate all the help, and advice I have gotten so far. Thanks a lot :-)

I know this newsgroup (I am crossposting this to the radio newsgroups, where I am very familiar with...) is not a good place to advertise my "computer," but forgive me.

I must sell my computer:

Pentium 75
Windows 95
24 MB Ram
850 MB HD
270MB External HD
14.4K Modem
4X CD
Color Monitor
keyboard
Mouse
Remote Controller
Microphone
ColorScanner
Games
50 FDs
Internet Ready

The equipments are fully functional.

I am asking all of these for $1299 (CDN) obo (or $999 US obo). You will never find a better deal.

Payment:
A money order or a bank draft must be cleared before shipping / giving. No CODs please.

I am advertising this to local news paper as well. First come, first serve. Please contact me before sending me any cheques.

Thanks for your consideration for buying.

Sincerely,

Masa

Go to a local General Aviation airport. They sell charts and Airport
Facility Directories.

It is more useful than just a frequency list because it will give you
some clue as to who you're hearing and what they're talking about.

I am looking at my 760 alongside my rc 2026...close

Similar size...same case. On the 760 you program in off manual
on the 2026 you have to hit the program button to implement
this procedure.
The band search is the same...layout, but different icons.

the four keys on the 760xlt in front are not the same
as the six keys on the 2026.

both 100 channels and 800

they both work the same...the 760 seems to have the edge
on sensitivity. But using the same antennae off two
hookins to scanner, they get similar reception....

But then too my little BearCat 400xlt gets signals that
come in strong and the 2026 don't...not as clear. The
16 channel 400 is great...

Anyone want to buy a bc 890xlt...i just don't use it
anymore...have it set up for 800 national emergencies...
if ever that occurs....

great scanner for low freq's....very very good there.

bill conduit
etc.

Jan -

E-mail me your cap codes (tones) for each department. There are several manufacturers that make tone decoder boards or you can build one from scratch.

After I get your tones, I will look to see if their are any common tones that a decoder could pick out.

Tallahassee Police Department

460.025 - Channel 1
460.125 - Channel 2
460.225 - Channel 3
460.275 - Channel 4 (Repeated)
460.275 - Channel 5 (LP)
460.325 - Channel 6

During the day, CH1 is Eastside Dispatch, CH2 is Westside Dispatch, CH3 is Info.
At night, CH1 is Eastside, CH2 is Northwest, CH3 is Southwest, and CH6 is info.
During special events (such as FSU and FAMU football games), they use the
daytime scenario and use Ch. 6 for Special Ops.

They use the standard Florida Public Saftey Signal and 10- codes with few
exceptions.

Units are arranged as 2A83, where the first digit indicates shift number
(1-moning, 2-afternoon/evening, 3-midnight). The second and third digits
are the zone, arranged backwards as zone and subzone. Zones 1,2 are NE,
Zones 3,4 are SE, Zones 5,6 are SW and Zones 7,8 are NW. Each zone is
arranged into a subzone A and B. North-South zones are deliniated by
Tennessee Street (US90). East-West zones are deliniated by Monroe St.
(US27) and Meridian Road. The forth digit is the unit identifier.

TPD is dispatched and calls dispositions as the four digit CAD ID's. They
call car to car as a unique three digit ID. 3-digit ID's in the 100 range
are for the Watch Commanders (Lt.), 200 range for the Sergeants, 300 for
Special Ops, 400 for detectives, 500-800 for patrol units, 900 for
non-sworn units.

Leon County Sherriff's Office

460.400 - Channel 1
460.200 - Channel 2
460.175 - Channel 3

CH1/2 are dispatch, CH3 is info. This changes during special events where they usually use CH3 as the special ops channel and run teletype/info from the primary dispatch channel.

Tallahassee Fire Department

154.190 - Dispatch
154.385 - Fireground

TFD repsponds to all calls in Leon County and operates with 12 dirrefent VFD's.

Florida State University Police

154.725

Usually consists of 10 patrol units and 2 sergeants. DIspatched and called by their unit ID numbers ranging from 1 (the Chief) to 98. They use the standard Florida Public Safety 10-codes and signal codes. (same as Florida Highway Patrol).

Florida A&M University Police

460.525 - Dispatch

FAMU PD is operated by TPD and uses the same code termonology and uses its primary channel for info, though the officers do have the ability to switch to one of the other TPD channels if desired.

122. AR8000 US interface for RS232

Newsgroup: rec.radio.scanner
Date: 1997-07-02 00:00:00 UTC
From: Gommert Buysen <GOMMERT.BUYSEN@MICROMASS.CO.UK>
Message-ID: <01bc8724$145330e0$a5bdafce@gommert>
Source record: 192758

Hi there,

I have read something about a different RS232 interface for the US market. Over here in Holland we use the 8232 interface. As I'm writing software for the Ar800 i would like to get some details about this US interface. Does it accept al nomal commands like the 8232. why is there a specail interface for the US market.

You can send your mail to:

Gommert.buysen@micromass.co.uk

Tnx..

prografx@teleport.com (Steve Kennedy) writes:
>Any supposed "loss" due to the difference in absolute impedance is
>more than made up for by the effectiveness of the qquad-shield (two
>layers of foil. two layers of braid, alternating).

There is some loss at each end due to impedance mismatch. However,
often 75 ohm cable has lower loss per foot than 50 ohm cable of about
the same size, and over longer runs this overshadows the impedance
mismatch losses. Thus, 75 ohm cable is often a *better* choice for
receiving applications than 50 ohm cable, except when distances
are short.

(Things are more complicated when transmitting, since impedance
mismatches can reduce transmitter output power.)

Has anyone else ever noticed what a dork Drew the Spew is? All this guy does is ramble on and on about how life in general is soooooo terrible. Let's face it. The guy needs to get laid! Working for minimum wage at a daytime only AM station must eat away at you....

Keith

Let's all try and get Drew laid. Come on people, are you with me?!?

For the entire state of Colorado, I would recommend Scan Colorado, which is available locally in the Denver Metro area. Check out the Web site: http://www.frii.com/~rmedic/

If you are more interested in the Pikes Peak region, then check out http://ourworld.compuserve.com/homepages/Scan_PikesPeak for local frequency info.

Ken

Cross-posted to: alt.radio.scanner,rec.radio.scanner

Here is the complete Atlanta Fleet Map and Talkgroups from ki4je, Atlanta's metro trucker.
Please email winndixie@bellsouth.net if you have additional data so I can update this.
Special 'at a boy' to the person who can disclose to me how to monitor the "HERO" trucks used by GA DOT.

Also what is the id or frequency used by GA PSC for those blue vans that lay in wait for trucks along the highway. I am refering to the ones marked "ENFORCEMENT". I have heard them using DeKalb and Cobb's TRS. Don't they pocess a frequency or slot of their own? BTW these guys never bother me. I just want to see who they are catching for chuckles. Remember to watch out for operation "HARDNOSE" by GSP through the weekend and hear them on 155.910.

From Florida Statutes:

{SECTION 843.16 }
Unlawful to install radio equipment using assigned frequency of state or law enforcement officers; definitions; exceptions; penalties.--

(1) No person, firm, or corporation shall install in any motor vehicle or business establishment, except an emergency vehicle or crime watch vehicle as herein defined or a place established by municipal, county, state, or federal authority for governmental purposes, any frequency modulation radio receiving equipment so adjusted or tuned as to receive messages or signals on frequencies assigned by the Federal Communications Commission to police or law enforcement officers of any city or county of the state or to the state or any of its agencies. Provided, nothing herein shall be construed to affect any radio station licensed by the Federal Communications System or to affect any recognized newspaper or news publication engaged in covering the news on a full-time basis or any alarm system contractor certified pursuant to part II of chapter 489, operating a central monitoring system.

This has been interpreted in criminal case law (there really isn't much history of enofrcement readily accessable, but there is some) to mean a permanently affixed or "installed" scanner and NOT to a portable, handheld device.

In addition, the law reads that the device is prohibited if it is actually reciving police frequencies - NOT "capable", hence I would interpret that to mean a scanner that is not programmed with police frequencies to be completely acceptable.

It is also interesting to note that later in the section:

(3) This section shall not apply to any holder of a valid amateur radio operator or station license issued by the Federal Communications Commission or to any recognized newspaper or news publication engaged in covering the news on
a full-time basis or any alarm system contractor certified pursuant to part II of chapter 489, operating a central monitoring system.

Meaning that if you a serious about scanning in Florida on the go, then get a HAM license.

(4) Any person, firm, or corporation violating any of the provisions of this section shall be deemed guilty of a misdemeanor of the second degree, punishable as provided in s. 775.082 or s. 775.083.

I've never known anyone to serve jail time, the case law that I saw mostly had fines ranging from $40 to $100 and a few community service judgements.

132. REQ: LA Fire Freqs

Can anyone give me the frequencies being used by the air tankers and fire crews at the fire scene in Azuza?

Thanks

Richard

133. it is possible to creatively program the trunktracker

charset="iso-8859-1"

The following post out of necessity to make the point contains mime html =
formatting. Please move on if you can't display properly as it will make =
little sense without it.
Yes it is possible to creatively program the trunktracker. This isn't of =
my orgination but has all ready been implied by a post from an ingenious =
fellow who mentioned how he locked out entire Blocks using a size code =
that uses only one fleet and a few subfleets. These use only a few spots =
in the lockout list and can cover up to 8000 ids per block.

I have gone back and started displaying the whole data map for entire =
systems on a block per block basis in my latest efforts with Excel. It =
has several advantages if you look at one of these I did even if you =
don't live in the Metro Atlanta area. You will see how the 64 k of =
memory in a Motorola system is used for a given fleet map.

Every block uses the exact same amount of memory which is 8K. In a type =
2 system every talkgroup uses at least 16 bytes. In our area these =
talkgroups seem to be pretty much every 32 bytes on odd motorla hex =
numbers. The true hex number is to four places while moto uses only the =
most important three digits for a talkgroup. Since there are TGs every =
32 bytes then it follows there are 8192 divided by 32 talk groups per =
block. That is 256. Look at this data
=20

s6
1
32
8
32
256

256
8192
=20
Both s5 and S6 use 32 bytes per fleet-subfleet and will each =
fleet-subfleet will fall on a unique talkgroup.

Notice the cells in light blue.
Therefore if you selected either of these sizes for a S0 block it would =
follow that the Uniden would associate any byte which may be a talkgroup =
with a special bit set as part of a fleet it is supposed to either hear =
or lock out, your choice. It will not follow the rules for processing a =
s0 block. You will have a map of fleets and subfleets not readily =
understood by someone who is looking for type 2 ids. It is your map so =
who cares if it works? As a matter of fact IMHO a type one display is =
easier to read and understand at a glance then a type two display.
By examing this chart carefully you will see other hacking possiblites.

This is a multi-part message in MIME format.

------=_NextPart_000_01BC871F.7BCE8800

charset="iso-8859-1"

The following post out of necessity to make the point contains mime html =
formatting. Please move on if you can't display properly as it will make =
little sense without it.
Yes it is possible to creatively program the trunktracker. This isn't of =
my orgination but has all ready been implied by a post from an ingenious =
fellow who mentioned how he locked out entire Blocks using a size code =
that uses only one fleet and a few subfleets. These use only a few spots =
in the lockout list and can cover up to 8000 ids per block.

I have gone back and started displaying the whole data map for entire =
systems on a block per block basis in my latest efforts with Excel. It =
has several advantages if you look at one of these I did even if you =
don't live in the Metro Atlanta area. You will see how the 64 k of =
memory in a Motorola system is used for a given fleet map.

Every block uses the exact same amount of memory which is 8K. In a type =
2 system every talkgroup uses at least 16 bytes. In our area these =
talkgroups seem to be pretty much every 32 bytes on odd motorla hex =
numbers. The true hex number is to four places while moto uses only the =
most important three digits for a talkgroup. Since there are TGs every =
32 bytes then it follows there are 8192 divided by 32 talk groups per =
block. That is 256. Look at this data
=20

32
256

256
8192
=20
Both s5 and S6 use 32 bytes per fleet-subfleet and will each =
fleet-subfleet will fall on a unique talkgroup.

Notice the cells in light blue.
Therefore if you selected either of these sizes for a S0 block it would =
follow that the Uniden would associate any byte which may be a talkgroup =
with a special bit set as part of a fleet it is supposed to either hear =
or lock out, your choice. It will not follow the rules for processing a =
s0 block. You will have a map of fleets and subfleets not readily =
understood by someone who is looking for type 2 ids. It is your map so =
who cares if it works? As a matter of fact IMHO a type one display is =
easier to read and understand at a glance then a type two display.
By examing this chart carefully you will see other hacking possiblites.

charset="iso-8859-1"

The following post out of =
necessity to=20
make the point contains mime html formatting. Please move on if you =
can't=20
display properly as it will make little sense without =
it.

Yes it is possible to =
creatively program=20
the trunktracker. This isn't of my orgination but has all ready been =
implied by=20
a post from an ingenious fellow who mentioned how he locked out entire =
Blocks=20
using a size code that uses only one fleet and a few subfleets. These =
use only a=20
few spots in the lockout list and can cover up to 8000 ids per =
block.

I have gone back and started displaying the whole data map for entire =
systems on=20
a block per block basis in my latest efforts with Excel. It has several=20
advantages if you look at one of these I did even if you don't live in =
the Metro=20
Atlanta area. You will see how the 64 k of memory in a Motorola system =
is used=20
for a given fleet map.

Every block uses the exact same amount of memory which is 8K. In a type =
2 system=20
every talkgroup uses at least 16 bytes. In our area these talkgroups =
seem to be=20
pretty much every 32 bytes on odd motorla hex numbers. The true hex =
number is to=20
four places while moto uses only the most important three digits for a=20
talkgroup. Since there are TGs every 32 bytes then it follows there are =
8192=20
divided by 32 talk groups per block. That is 256. Look at this data

```
s5
=20
1
=20
64
=20
4
=20
32
=20
256
=20
128
=20
8192
=20
s6
=20
1
=20
32
=20
8
=20
32
=20
256
=20
256
=20
8192
```

=20

=20

Both s5 and S6 use 32 bytes per fleet-subfleet and will each =
fleet-subfleet=20
will fall on a unique talkgroup.

Notice the cells in light blue.

Therefore if you selected either of these sizes for a S0 block it =
would=20
follow that the Uniden would associate any byte which may be a talkgroup =
with a=20
special bit set as part of a fleet it is supposed to either hear or lock =
out,=20
your choice. It will not follow the rules for processing a s0 block. You =
will=20
have a map of fleets and subfleets not readily understood by someone who =
is=20
looking for type 2 ids. It is your map so who cares if it works? As a =
matter of=20
fact IMHO a type one display is easier to read and understand at a =
glance then a=20
type two display.

By examing this chart carefully you will see other hacking =
possiblites.

Body handling: HTML body converted to readable text

This is a multi-part message in MIME format.

------=_NextPart_000_01BC871F.7BCE8800

charset="iso-8859-1"

The following post out of necessity to make the point contains mime html =
formatting. Please move on if you can't display properly as it will make =
little sense without it.
Yes it is possible to creatively program the trunktracker. This isn't of =
my orgination but has all ready been implied by a post from an ingenious =
fellow who mentioned how he locked out entire Blocks using a size code =
that uses only one fleet and a few subfleets. These use only a few spots =
in the lockout list and can cover up to 8000 ids per block.

I have gone back and started displaying the whole data map for entire =
systems on a block per block basis in my latest efforts with Excel. It =
has several advantages if you look at one of these I did even if you =
don't live in the Metro Atlanta area. You will see how the 64 k of =
memory in a Motorola system is used for a given fleet map.

Every block uses the exact same amount of memory which is 8K. In a type =
2 system every talkgroup uses at least 16 bytes. In our area these =
talkgroups seem to be pretty much every 32 bytes on odd motorla hex =
numbers. The true hex number is to four places while moto uses only the =
most important three digits for a talkgroup. Since there are TGs every =
32 bytes then it follows there are 8192 divided by 32 talk groups per =
block. That is 256. Look at this data
=20

s5

32
8
32
256

256
8192
=20
Both s5 and S6 use 32 bytes per fleet-subfleet and will each =
fleet-subfleet will fall on a unique talkgroup.

Notice the cells in light blue.
Therefore if you selected either of these sizes for a S0 block it would =
follow that the Uniden would associate any byte which may be a talkgroup =
with a special bit set as part of a fleet it is supposed to either hear =
or lock out, your choice. It will not follow the rules for processing a =
s0 block. You will have a map of fleets and subfleets not readily =
understood by someone who is looking for type 2 ids. It is your map so =
who cares if it works? As a matter of fact IMHO a type one display is =
easier to read and understand at a glance then a type two display.
By examing this chart carefully you will see other hacking possiblites.

I have heard baby monitors on 27.095, 36.700, 37.600, 30.400, 30.600 Mhz.
All FM. Also I suspect 30.100 even though that is also a cordless phone
base frequency.

: I could pickup a very low weak signal
: on 921.9375 and i was sitting in the parking lot
: I thought it would be much stronger than that
: could this be the wrong feq ???
: Thanks for your reply's

That is most certainly the wrong frequency as none of the drive
throughs use anything near 900 Mhz.

The drive throughs operate in the 35 to 40 Mhz range.

Barry

For those of you living anywhere from Santa Barbara to San Diego, you might want to put 414.85(r) and 415.6(t) in your scanner. Mark Flass, who is the LA SS communications guy, just LOVES to call his wife as well as other people on this high-level patch frequency, and talk about his personal life as well as SS business on this frequency. As of late, he has blocked out his portion of the patch from coming out over 414.85, not to worry, just listen to the imput on 415.6. Btw, the pl is 103.5. Have a nice Day

John,
I'm sorry to tell you that AFAIK the 174-380 cannot be included since
it doesn't have the circuitry to support it. But, you have a very nice
scanner, none the less. (I had one, and stupidly sold it, and now am kicking
myself!)

Sincerely,
Robert McIntyre

I tell you what, we really have some smart asses out there don't we?

MARS stands for Military Amateur Radio Service

This program is for military personell that are stationed overseas to be
able to make phone calls to their families. Most of the time these people
are stationed in places where personal phone calls are either not available
or would be prohibitivly expensive.

This service is provided by Amateur Radio Operators.

> the 46 MHz range and I'm not so sure we got it right. We used a formula
> I don't remember that divided the freq by some constant?!

A discone is a vertically polarized omnidirectional antenna, with a
bandwidth of 10:1 on the calculated lowest frequency, which is in
wavelengths based on, I beleive, 4 x diameter of the disc.

A discone cut for 100 MHZ, (462/f)/2 would get you the diameter
of the disc of 27.72 inches, and would work up to 1000 MHz.
Adding a vertical element to the mix, which is not part of a true
discone, will extend the range of the antenna a bit, probably plus
or minus 5 MHZ from the frequency it is cut at, using the above
formula, so for your discone to cover 46 MHZ cordless phones, you
want to cut your vertical element to (462/46)/2 *12 = 60.26 inches.

>because you are paranoid doesnt mean that someone isnt watching you.

What you are talking about is "TEMPEST" technology, and it really
exists. The range, however, is realistically somewhere between the
minimal "in front of your house" to "miles away."

TEMPEST is a touchy subject with the government, as they don't want
the true specs known. They, however, shield their sensative data
with "Tempest Proof" shielding in specially constructed rooms, so that
they are not the subject of a "TEMPEST" attack.

Bottom line; it's real, it works, and don't type in on your computer
unless you want someone else to see it.

A frequency counter can be used to check the frequency of many things
, however it's *probably* used mainly to check the frequency of an
oscillator (a device used to generate waveforms) your scanner
probably has several oscillators as does your TV, computer, stereo,
etc.

Can't help ya on the universal counter/timer.

> If I wanted to measure the time it takes for a sqare wave (+/- 5 volts)
>to go through 2000 cycles what type of measurement device would I need
>to use.

You could use a frequency counter and divide 2000 by the frequency ,
IE, if the counter said 500 Hz , then 2000/500 = 4 , = 4 seconds. If
extreme accuracy is not needed you can also use an older oscilloscope
(assuming you don't have access to the latest digital scopes :))

> Also does any body know of such a device wich is portable and wich has
>a RS232 output of its measurements?

I have no idea what frequency range and accuracy you need so I can't
give you a good answer but you might stop in at your local bookstore
and thumb through Popular Electronics, Electronincs Illustrated etc.
and check out some of the ads in there

> Please help. I would would apreciate it if you could respond via

Greetings everyone!

I'm trying to compile a list of various hints, tips, and tricks that make the scanning hobby a little bit easier. Whether it be how you have your frequency banks set up, or how you have your monitoring station set up, I'd like to know it so I can put together a listing. I'd like to go ahead and be able to put it up here for everyone to nab, so any input would be great.

You can email me or post here, although chances are better that I'll get it if you email me. And, it doesn't matter how lame the tip might be, I'll put it in there.

Thanks,
Scott

I've dealt with AES for over 13 years and have never had a problem. I recently made a large purchase from them the Thursday before Field Day weekend and was told I would receive it UPS on Monday or Tuesday at the latest. I got it on Friday in time to play with it during Field Day! By the way, AES as never sent me anything by the US mail--alway UPS. They were $300.00 less than HRO for the same items. AES--keep up the good work, telephone help, prompt shipping and competative pricing! 73 de KA8SWD.

Every radio I have I bought through AES via mail (so I don't have to pay sales tax) And the last Yaesu I bought came the NEXT day via UPS even though I didn't pay for next day service! I called every mail order company in the US, and they had the lowest price.

My last order was 1 or 2 years ago, so I hope they haven't gotten worse in the last few months as I hope to use them again.

Howdy -- In the strictest sense a Frequency Counter measures frequency only. A Universal Counter can also measure period (reciprocal of freq), period average, time interval, ratio and totalize and has provision for an external gate. I recall an HP counter called a Preset Counter/Timer which had thumbwheel switches on the front panel and one could dial in the desired number of events -- say 2000 and when the counter had totalized that number of events -- it would generate an output so the time for the 2000 events could be determined.

One could use the totalize mode in a Universal Counter and supply an external gate to determine how many events occurred in a given time. Thus by varying the external gate time -- make a determination of how long it takes to accomplish x number of events.

Some of the newer expensive Computer controlled counters can do this as well.
Hope this helps

I have heard that very isolated (desert?) locales, can be intercepted from
orbiting spy satellites (~120 miles), so the signal is plenty strong if
there is no competing noise.

Supposedly both the Timothy McVeigh defense team and the FBI offices in
Boulder, CO were both bugged in this manner. Perhaps you remember the
uproar over a supposed "confession" that was printed in the press?

All the while, the newspaper insisted it had absolutely done nothing
wrong....thats because Van Eck monitoring, as it's also called, is not
illegal under current American law.

Interesting subject, and I think relevant to a scanner newsgroup.

H Higgins

PS. It was also alledgedly used against the spy Aldrich Ames, the CIA
spy.

A cig lighter in a car is wired for about 20 AMPS! You can use the radio pluged into it, it will only draw what the radio needs.
Most cig lighter cords have a fuse in them, if the scanner needs 200 mA, put a .5 or 1 amp fuse in the cord. That way if something goes wrong with the cord or the radio it won't glow orange like a CIG lighter!

Where can we get a list of Radio Shack's franchise ("Dealer") stores?
This would be an invaluable resource for those of us who occasionally need
to purchase something from Radio Shack but dread having to deal with Sammy
Salesdroid and his foolishness.

>My favorites are that the 5w handheld CB's
>will work for 5 miles and that the 100mw 49Mhz headsets can be used
>car-to-car for up to 1/2 a mile. And then there's the grandaddy of them
all,
>that you can get up to 50 miles, everyday, with a mobile CB and out "best

>magnet mount antenna"

I was once at Radio Shack when a construction foreman came in and wanted
to purchase some radios to communicate with his work crew. What do you
suppose Sammy recommended? CB? Nope. GMRS? Nope. Interant Business
Band? Nope. How about HTX-202s!!!! When the foreman inquired as to why
he should buy HTX-202s at $199 a piece instead of the $99 CB walkie-talkie
he was holding, our droid friend responded with "Well, uh, these have a
lot more channels and more power than the regular CBs." No mention was
ever made about licensing requirements, of course.

True story. I saw and heard it with my own eyes and ears.

I only recently got an Opto Scout counter and am really happy with it but have just a telescoping antenna at this time. I'd like a lower profile antenna and was wondering what others have used successfully. Is there a good all around VHF-UHF ant.? How about for 800 MHz?
Also, how essential is an FM notch filter? Worth the money?
Thanks for any and all input.
Regards,
Phil

>Can't help ya on the universal counter/timer.

A universal counter/timer has the same basic building blocks as a
frequency counter (stable timebase oscillator, several counters,
a display) but can arrange them in different ways to make several different
measurements.

Features may vary from unit to unit, but in addition to measuring frequency
you might be able to measure period of a signal, the frequency ratio
between two signals, the time difference between two asynchronous
signals, or the total number of cycles of a signal.

> Dave truth@planetc.com http://infinet.org:3/dudes.htm

He's was looking for something to use with scanner and CB both of which use a 50 ohm connection. He'd be better be better off using RG mini-8 coax. Whatever you get make sure it has a stranded center lead & a 95% or better braided shield. A foil shield with a 75% braid would also work. The db loss per 100 ft should be as low as you can afford, hopefully under 1db per 100ft, and closer to .5 db per 100ft.

To The group:

I continue to enjoy listening to my scanner while I operate on HF, 6m,2m. I have built and installed quite a few Ham Freq. antenna's where I can tune my antenna for best preformance on a narrow frequency range. What I want is to install and external antenna on my home to increase my effective reception range. I have two seperate idea's and would like some help sorting them out.

Idea 1. purchase a discone antenna RS has them on close-out for $44.95 and possible add a wide band pre-amp. I would consider 9913f coax to minimize feed line loss at 800mhz.

Idea 2. I'd go with a log periodic beam that would cover 50-1300mhz with aprox 5dbd of intrinsic gain across the spectrum.

Has anyone tried these set-ups???? If so what has worked best??? I like to listen to pretty much everything from police to business. Therefore, I need a wide spectrum set-up.

Thanks Brad WB7TSO

198. FS/FT: 2-32mb EDO simms $175/obo

Newsgroup: rec.radio.scanner
Date: 1997-07-02 00:00:00 UTC
From: ghopper@eskimo.com
Message-ID: <ghopper-0207971506090001@ghopper.ndip.eskimo.net>
Source record: 192884
Cross-posted to:
rec.radio.swap,rec.radio.amateur.equipment,alt.radio.scanner,rec.radio.scanner,rec.radio.shortwave,seattle.forsale

I have 2-32mb EDO simms that are new but surplus to my needs right now.
I've seen them sell for between $200 and $260 but I'm willing to take $175
a piece or trade for comperable value (or cash and trade).

Things I am looking for: 6 meter HT (azden), Newer HF rig like a Kenwood
TS-690s, Motorolla VHF (both low or high) and UHF gear (prefer mitrek),
and a pro-43

I also have for sale or trade: A Kenwood KSC-14 dual cup rapid charger,
new. $65 and a Kenwood TS-440SAT with all the filters and goodies $850 or
best offer.

Same here. I've ordered from them several times and usually receive
their products much faster than expected and nicely packaged. I consider
them the best amateur mail order electronics dealer anywhere!

Either this is a very isolated incident or we don't know the whole
story....

Also, unless your scanner can search in 30 kHz increments you will not hear most transmissions clearly
since you will be slightly off frequency. This is NOT a limitation of the SuperConverter, just something to
consider when choosing the scanner to use with this device. There are many scanners that fix the search
step in the 400+ MHz band to 12.5 kHz. You will still receive transmissions but not as many possibly or not
as clearly.

202. Pro 62

I disagree. Remember, this was a $400 radio; one of the best at image and intermod rejection. It still has few contenders, even with todays technology.

Not at all. The BC9000xlt is a 500 Channel base unit with alphanumeric tags for 250 of the channel memories. The BC3000 XLT is a 400 Channel handheld with standard full frequency display. Both units have tripple conversion, and alot of decent features we have come to expect from Uniden. Both good units, just not the same.

I found an undocumented Uniden Sportcat 150 feature (Great scanner by the way). Before you turn it on press and hold the WX and L/O keys. Turn it on and it shows the voltage left in the battery. When you are in this mode pressing the number keys brings up numbers you can adjust. Press the DC/Bank button does things too. If anyone knows what this is please Email me at afowler@juno.com. I tried Uniden customer support. It is always busy.

Strong Signals,

It is my understanding that Cleveland is NOT digitally encrypted. They are digitally trunked, though. There is a difference. If you had a receiver that could follow the Motorola Astro digital trunking, you would be able to hear the transmissions and understand them, without the further aid of decryption.

I am from Red Bluff, California but I am on vacation at my Grandparents house. I am a heavy scanner listener and a ham. I was outside at 9:10pm on Tuesday in Santa Barbara and saw the most amazing set of lights in the sky. It was heading directly northwest at a speed unlike a jumbojet. There was a jet passing by and comparing it to the wierd lights, it was going a lot faster. Also the direction was not the same as the standard flight path used out of LAX and Burbank/Glendale to SF and Seattle. It was more pointed toward Vandenberg Air Force Base. The object was extremley quiet and there were white lights in a square shape. A single white light in front and a single blinking red light in the middle of the square. I've checked out some sites of scanner listeners near the proposed Area 51 and they are very happy with their scanner findings. I'm interested in what they have to say as well as anybody in the are who could have seen this. I just want to know a little more info. Thanks a lot.

I wouldn't replace the antenna yet. To get the correct 1/4 wave length for an antenna, divide 234 by the frequency (in MHz). The answer is in feet, so multiply by 12 to get inches. For example: You want a 1/4 wave on 46 MHz. That would be 234/46 = 5.086. Multiple that by 12 to get 61 inches. BTW, are you using this on your scanner or on your portable phone?

George,

I have had my Trunk Tracker for about 3 weeks. I can positively
say that if you live in an area where the public service agencies
use Motorola trunking, you will not be dissapointed! Any other
solution to program and receive trunking is a hassle and is
expensive. It can be done with a scanner, a computer and some
software, or an additional box that several places produce. (None
are at all portable).

It does a very good job of receiving all the other non-trunked services, but this scanner really shines as a portable solution to receiving trunked services in the 800 Mhz. spectrum.

Any specific questions you may e-mail me.

Mitch

Giles County, Virginia, is in Southwest Virginia and is pretty rural and pretty Appalachian. Several months ago, the dispatcher (in her best Southwestern Virginia drawl/twang) sent the rescue squad to a home where the victim was "coughing up fleam" (rhymes with "stream"). Not once did she report this to the squad members, but several times she stressed "fleam." Don't know if she was passing on what the caller told her or if she was imparting her own medical wisdom.

I am looking for stores other than Radio Shack in Utah that sell scanners and related equipment. Also, any spy shop type places in UT other than SpyHQ in Salt Lake.

Thanks,

Dan

This is a morse (CW) ID for a station. The station callsign is:

WNMY366

Probably a business band or police/fire repeater.

I am having trouble with my Z30 scanner. It goes into freq. err
when its in the scan mode. I have checked the frequencies in the scanner
and all are within band. Turning off the radio and back on lets it go back
into scan but in a matter of minutes its locked again. Thanks for any
help with this problem. Ed

Another off topic post on this cool thread:

Federal and Local Law Enforcement agencies have a hard enough time dealing with cell phones, pagers, modems, e-mail and PGP. This sort of surviellance technique would probably be utilized only on the highest profile cases. On the other hand, it's a fairly common technique used in the private sector for industrial espionage. Our agent sets up her nest across the street from the industrial high rise building, 50 feet away, and points the big high gain yagi at the targets R&D cubicle. A number of security firms advertise counter measure services against this technique in the trade journals. Our paranoid friends should more concerned about what goes on in the private sector than with the Feds.

TEMPEST is a federal standard. It sets the limits on emissions from CPU's, monitors and other devices. Contractors supplying computer gear to "sensitive" mission feds must certify that their gear meets this standard, also used by the military.

In Illinois your employer may use electronic surviellance and information gathering techniques against you without a warrant or even a suspicion. It's a "managerial technique". Your boss can put a concealed CCTV camera in the ceiling above your desk and video tape / digitize everything you do in a 20 year career. Personally, I dont do much at work I wouldnt want video taped, but Im sure in a years worth of tape there's bound to be 20 or 30 seconds of nose picking / crotch scratching / etc that I wouldnt want to have posted as an avi on the internet. Your employer may surveil all your business e-mail and even "watch your keystrokes". In other states its not too hard for a firm's computer network manager to watch your terminal, even from a remote site. Any PBX phone systems records can be easily recalled, giving your employer the ability to determine what phone was used to call what number at what time and for how long. Most electronic building access systems records can also be easily recalled or printed real time, showing through which doors your key card was used and at what times and dates. But then again, it's their phone / computer / building that they let you use to make a living.

Shielding on current consumer market computer gear has come a long way. I remember the floppy drive on my old commodore C-64 made so much radio noise most of lowband was wiped out whenever the disc was being accessed. With a scanner I could hear it over a block away. The issue of shielding and eliminating stray RF is clearly on topic. All radios emit some stray RF, so if you use more than one radio you may be able to eliminate or at least decrease birdies and noise by improving the internal shielding and grounding inside the radios themselves.

A similar thing happened to me a year ago. I ordered a Yaesu mic from the Main store. I gave the salesman my credit card # etc. I told him it was a dicontinued mic. He said he had two in stock so it was no problem and that I should have the mic within a week. Well 14 days pass by and I called to see what happened. There was NO RECORD of my order. The salesman who I spoke with said that I had to pay UPFRONT since there was no mic in stock. HEY....How about calling me to say that the inventory on their computer was in error and that is I still wanted the mic I have to prepay so they can get it from Alinco. I NEVER got any notice. The salesman who I originally spoke with said he couldn't recall who I was or find any trace of my order even though I gave them my credit card info etc. I got the mic from HRO in SALEM,NH.
I thought this was an isolated incident but by original posting I see it isn't.

>the true specs known. They, however, shield their sensative data
>with "Tempest Proof" shielding in specially constructed rooms, so that
>they are not the subject of a "TEMPEST" attack.

The Tempest standards are easily available to any federal contractor. Shielded rooms are employed only at the highest security facilites, though newer building may incorporate designs to lessen stray rf, both inbound and outbound. What are REALLY cool are the shielded (faraday) cages and spectrum analyzers that industry uses to certify that their gear meets Tempest standards. Sadly, one of the most effective forms of room shielding comes from the use of residential foil backed wall and roof insulation, thus killing off many signals you would like to monitor while using a inside antenna. Check your attic, even / especially in wood frame structures. If you have the dreaded stuff your cheapest solution is to switch to an outside antenna, if your local Nazi condo board will allow it.

I got three replies to this post over the last week. I'm very pleased as each gave detailed info but some of them had conflicting responces. I'm reposting for a wider sampling of opinion. Hey, what the heck.....another gallop pole!

To all,

I've read a couple recent posts that boast the RS #20-014 six foot antenna pulls in cordless calls up to 2 miles away. If others have had this success please let me know! I'm using the RS #20-013 discone on the roof and have never been that happy.

I bought it as a newbie to scanning and then months later talked to a knowledgeble RS manager (I know, it sounds impossible) that told me the problem. I had carried in a copy of Grove's catalog and he pointed out the difference in the one they sold. RS discones have no vertical element! We spent half an hour trying to calculate the length needed for the 46 MHz range and I'm not so sure we got it right. We used a formula I don't remember that divided the freq by some constant?!

Anyway, I added the verticle element with my best calculations.

My questions to all are:

1: What IS the exact length needed?

2: Should I just replace the whole thing with the six footer?

Well I would say that two incidents in a year is quite isolated,
considering that they process thousands of orders in a year. Everyone
makes a few mistakes, but obviously you havent or you wouldnt be flaming
AES. Give them a brake and have a great 4th!

There is a company here in CANADA that sells ready-made
FM Stereo transmitters for 450$ and up.
They run from 250 mW to 25 Watts.
Scott Communications. They are on Sooke B.C.

I would like to know what that beeping is too. I hear it on a 400.00 frequency. The only thing i've figured out is that it seems to happen when a car transmits info on the in car computer. It happens every time but it also happens other times. Let me know what you find out.

Message-ID: <01bc8757$24923f40$9b3b8bce@bryan>
Source record: 192592

The real question is what if you live in a state where scanners are LEGAL and drive into FL?? I don't have to worry because of my ham license but what about the scanner listener in any other "scanner legal" state? He jumps in the car and drives to FL for a day and has his legal scanner bolted to the dash? Any case law to cover this? I would think a simple "did you know a scanner is not legal in this state" would be the officers response, but he could play hardball also.
Just like the radar detector is illegal in VA, you can have it in the out of state car but not turned on (I got stopped a few years ago on RT 81, cop asked if it was on, I told him I unplugged it when I crossed the line, he believed me). But if you have VA plates your in trouble just for having it.

251. Antenna Gain?

Newsgroup: rec.radio.scanner
Date: 1997-07-03 00:00:00 UTC
From: Outatime@fyi.net
Message-ID: <ECq1sF.C3p@fyi.net>
Source record: 192593

Experts/Amateurs/People like me :) ,

I do not understand the concept of antenna "gain". I hear often that a discone antenna is excellent because it receives omnidirectionally and has wide frequency coverage, but it is rated as 0 dB gain. Does that mean that whatever it picks up is exactly what is on the airwaves? Does an antenna with, say, 5 dB gain, actually increase the signal to the scanner? If anyone has the time to set me straight, I'd appreciate it, for I would like to buy a "base" antenna for my handheld scanner (outdoors, or perhaps tabletop indoors).

Thank you

Bill

The "beeping" is of course, a CW (morse code) ID, probably for a repeater - probably a public service one.

Your wave file "translates" to -> "WNMY366" which is a FCC callsign.

If you tell me what state you heard this in, I can look it up on the data base and maybee identify
the license holder.

cheers!

The list of CB Shops is finally available for your shopping & repair needs
all over the nation.
CB Shops listed from East to West and North to South are available
and
ready to address your needs. Some carry hard to find equipment, and

some carry wholesale parts & equipment.
Whether it's a brand new radio or an old tube type amplifier, your
chances
of finding what you need are much greater and faster with this
brochure.
Use this brochure to shop & compare to enable you to buy at the
best
prices, or to compare what ever prices on labor, etc.
Will save you time and hassles of trying to search the information
by
other means and in the end will more than likely save you some
green$$$$$.
This brochure is LOADED WITH OVER 60 names, addresses,
and telephone # 's of
different shops, shacks, and even, shops on wheels.

This brochure will pay for itself with the time it will save you
in searching
for that one shop that can accommodate your specific needs.
You won't want to miss out on the next great deal !!
Here's how to get your copy of this, fast selling ,
brochure.....

Send $2.00 cash, .32cent stamp , and of course, your snail mail
address
to.....
(please include your e-mail address)
TEAMWIN 01
P.O. Box 0583
Loveland, CO. 80539-0583

Thank you and 73's from Colorado.....

My 2005 just started doing this also. If I jiggle the wires to the
battery it stops, so it seems to be a loose connection INSIDE.
Also, you didn't use a rechargeable battery I hope. Rechargeable
9 volt batteries are only about 7 volts when full, so it will
probably always beep.
Hope this helps.

Was on my way to work tonight when I heard something on the radio (scanner) about a Northwest flight inbound for Phoenix with a medical Emergency on board. I also monitored the Airport operationms and airline company and ground frequencies.

The person was in the rear of the plane..was taken to hospital by ambulance where she later died. I believe from what i could tell, she also had a child with her..arrangements were being made to take the child to the hospital also. 901H is the dispatch code for Dead Body.

what frequencies have you been monitoring
try web page perconcorp.com for search

I think RB uses same frq as Manhattan Beach. MB uses 470mhz frequencies
for PD. I think they either have as 154 or a 470mhz for fire.

I know Los Angeles City fire is on an 800mhz system as is Orange County
fire. search 856-861mhz

Antenna gain DOES NOT amplify a signal in any way; it reders to the fact that an antenna can concentrate its efficiency in certain directions. The ratio of the maximum radiation intensity of a unidirectional antenna to the radiation intensity of a nondirectional antenna using the same power input is known as antenna gain. Antennas also have "reciprocity"; this means that an antenna that transmits well on a given frequency will also receive very well. Hope this helps you! :-)

hello;

to to: http://www.altavista.digital.com
use their search engine and go for: railroad frequencies
railroad radio
etc.

then go to : http://www.yahoo.com
search for "search engines"

then use the various ones that yahoo brings to you....

or you can search for the railroad company name frequencies

such as: Southern Pacific and Railroad Frequencies

Southern Pacific Railroad + Radio Frequencies

and etc.

bill conduit
etc.

It is up for auction at Ebay. I am currently the high bidder, but I have ended up with 3 scanners. So if you are looking for a good deal check it out. It is sold right now for $145. Here is the ad:

"A few months old and never installed in a vehicle. has: highway patrol alert, highway patrol scan, local/county police scan, DOT, news & fire scan, scans all 40 cb channels, weather scan, 12 bands with 800 mghz, aircraft, one touch band search, 100 user programmable channels, ac dc operation, mobil mounting kit. 12.50 shipping & handling insurance extra. buyer to prepay item and s&h. Postal money order only. "

http://www.ebay.com/aw-cgi/item.cgi?item=gtn1807

I know Raz would love to sell it. He is working 14 to 16 hours days driving a logging truck. If you have any questions, you can email him at:

raz@reninet.com

Thanks.

> wide spectrum set-up.

No question... go for the LP.
Why?
Because that pre-amp will amplify *everything*, signal and noise. No net
gain of useable signal over noise. The 5 dB gain of the LP is useable
gain of signal over noise. The drawback there is that the LP will be
directional, and need to be aimed, while the discone will be
omnidirectional.

The formula for a 1/4 wavelength antenna in inches is 2834/MHz
(negelecting conductor diameter). For 46 MHz, this works out to 61.6
inches. By the way, if you are ever in a pinch, you can make an antenna
by taking a length of 50 ohm coax with the proper connector on one end
and stripping back the outer insulation and braided shield to whatever
length is given by the formula.

Dave

> with it.

Yes I did replace a 2035 with it. As a matter of fact, I sold my 2035 to buy your piece of crap. I can give you the name of the person I sold it to. It shipped out the Wednesday before memorial day. You seem to be under the impression that I am trying to send you back my 2035 and keep your 2042.

First he told me he sent the money order on 5/29/97. I received
> it on 6/6/97 with a postmark of 6/4/97.

Money order WAS MAILED on Saturday. I sent it priority mail and ED lives about an hour and a half from me so I was very suprised it took 6 days to reach him. But if it did not get picked up until Monday from the box. It would go out tuesday and he would have gotten it friday.
>
> I went ahead and sent the radio to him as promised on 6/9/97. He then
> E-mails me a rude letter wondering why it took so long for me to get the
> money order.

All I said was "Geeze 7 days for priority mail?"
It was directed at slow mail service not meant to be rude to you.
Sorry if you took it that way.

He receives the radio and immediately starts accusing me
> of send him a 2035. (I bought a 2035 2 months ago from a gentleman in
> Ohio, and I still have it.)

When I received the radio it was a 2042 with the guts of a 2035.
I E-mailed ED and told him he ripped me off and I wanted my money back.
I even offered to keep the radio for what it was if he sent me back $100.00 (Fair market price for a 2035)

I then e-mailed him stating "he must be
> mistaken. I went and checked to make sure I had my 2035 and I did.
> He then started demanding that I give him $60 dollars as to make up the
> difference in price. I refused because I believed he was now trying to
> scam me.

Ed What are you smoking? I would tell you to send some this way but you would probably send tobacco and charge for pot. All I ever heard from Ed

was "The radio was a 2042. I ain't gonna take any shit from you."
The $60.00 he is referring to is in order to make this radio work I had
to order a Logic board from radio shack. At the time I was told they
were $160.00. I asked Ed if he would split the cost.$80.00 Still got no
response. (The logic board actually cost me $190.90)

I then went on Vacation. I returned a couple days ago & I have
> ton's of threatening e-mail waiting for me from him with more threats. I
> then checked the newsgroups and found all these slanderous statements he
> made about me.

No Slander ALL TRUE!!

But I also have received a lot of e-mail from the other
> people that have done business with me with nothing but good comments &
> support that they would still do business with me and would have nothing
> to do with "Fraudelent Bob".
>

> off by me and I have sold 112 radios since Jan 1/97.
>

If you sold that many, you should know the difference between a 2035 and
a 2042. Where have you sold all of these radios? Do you run a radio
business?

> Well thats all I have to say about the subject. It's a shame that
> the internet can be such a usefull tool but a few people have to abuse
> it and ruin it for everyone else.
>
> By the way I gave all my personal info (ie. DOB, Soc Sec #, Full name)
> to Bob9000 today so that he may file suit or complaints or whatever he
> wants to do. I have nothing to hide.

The complaints were already filed so he was a little late on that.
He also neglected give me his phone number so we could discuss this man
to man instead of on the internet. I gave him my number but he is afraid
to call me. (he said so himself) I am to threatening for him.
>
> Thanks for listening "to the rest of the story"
>

Thanks for telling it ED. To bad it is a twisted version full of half
truths.

I will not start flaming here. Yes I did send ED an Email almost every
single day since I recieved this radio. I was the one who did not
receive what was advertised and promised. He never answered a single one
of them. I never heard any response from him until about 3 days ago When

he told me he was an attorney (right) and he was going to file charges for harrassment. I am still waiting. I DID receive a 2042 from ED with the numbers cut off the back and the insides of a 2035. The fact that he thinks I would try and send him back a 2035 is rediculous. Think what you will about me. All I did was trust someone enough to send him a $310.00 money order up front and I got ripped off.

It says that: "the BC-760, BC-950XLT, and the Regency R-1600 are clones
of each other" there is nothing in the article about the PRO-2026
Sorry...

>is known as antenna gain. Antennas also have "reciprocity"; this means that
>an antenna that transmits well on a given frequency will also receive very
>well. Hope this helps you! :-)

It is also wise to know that "db" doesn't mean anything by itself. It
is a comparison identifier, and needs to be followed (or at least
agreed upon) by a value to compare with.

An antenna claiming a 3 db gain means that the signal out of the
antenna is double that out of a [WHAT]. Out of a dummy load? Out
of a Yagi beam? Certainly not out of the transmitter.

Generally, when an antenna manufacturer claims some sort of "db gain",
the comparison is a 1/4 wave omnidirectional antenna in freespace. That
generally means a 1/4 wave ground plane (which isn't perfectly
unidirectional in all three dimensions.) Of course, an antenna
manufacturer can claim a gain over an isotropic radiator and inflate
his DB Gain claims without doing a single thing to the antenna. (an
isotropic radiator is a theoretical antenna which does radiate
equally in ALL directions. It does not exist.)

Knock out some of the signal which goes straight up into the sky by
diverting it into the horizontal, and you've increased the gain. Do
likewise to the signal going straight down into the earth, ditto, and
then chop off the side lobes and the back lobe and you've got some
serious gain now... although you've also got negative gain in the
directions not in your main lobe.

July 1997

Hello from Kansas,

Independence Day! Parades! Bottle rockets, smoke bombs and M-80s! The smell of sulfur, the stench of burned hair, tiny scorch marks on arms, the sound of the wife shouting "What happened to your eyebrows!" Too many hot-dogs, too much watermelon, too many adult beverages. Cedar shake roofs going "poof" after enduring a 3-point landing by an aerial bomb. No wonder the British make fun of us.

This month:
1. New Johnson County Med-Act first responder.
2. More statewide 800 stuff.
3. Kansas City KS trunking update.
4. Wichita TrunkTracker codes.
5. Topeka TrunkTracker codes.
6. JoCo TrunkTracker update.

#1. Johnson County Med-Act has added a first-responder in western Shawnee, with the radio number of 1163. Housed at Shawnee Fire Station #3 at 6805 Hedge Lane, it is a Suburban outfitted with essentially all the same equipment as a regular Med-Act unit. It is an Advanced Life Support (ALS) unit without the ability to transport patients. The idea is to get it to a scene quickly so they can stabilize the patient. Depending on the location in Johnson County, you will often hear a pumper sent as a first responder in addition to the normal ambulances. Not a bad idea. An outsider to the situation may think it is over-doing it, but those on the receiving end most likely will not mind when half a dozen pieces of apparatus show up.

#2. Dale has some news about the statewide system. It seems that someone in Topeka found some extra funds to funnel into the project in hopes that it will speed completion. Tower sites are now being plotted in Troop F (Wichita.) There was enough money to erect the infra-structure for the whole deal, but not enough for mobile radios or portables. His sources indicate that someday the whole Kansas system may be trunked. There is not the money for it right now, but since the state has a contract with Motorola, and Uniden developed the TrunkTracker, let them go trunked! He heard that KHP is going to buy 50 GPS (Global Positioning System) for AVL (Automatic Vehicle Location) for Troop B (Topeka.)
Unlike many local/county agencies who have trunked systems, the State is not going to allow non-public safety agencies on their towers. (I wonder if Dale means they will not allow them on their actual trunked

system, or will not allow them to rent tower space for other trunked systems. Dale...could you check that out and advise? Inquiring minds want to know. Andy)
With the coming of centralized dispatch for KHP it looks like Troop E (Garden City) might lose their midnight shift in the near future.
Last, KHP is in the process of assembling an assault team, and Motorola Saber Securenet portables and a mobile repeater are part of the package. Dale might get involved in the programming of the radios, as well as dealing with medical aspects of the program. It will be great to have someone with their foot that far in the door as a contributor to the column.
As usual, Dale has come up with a host of interesting facts and details about the Kansas system. Thanks for your input.

#3. From several sources, one of which is a trade magazine called "Mobile Radio Technology," there is a big change in the works for KCK's trunked system. KCK is planning a new dispatch center (I don't have the details on that yet.) and to merge their existing trunked system with the BPU's (Board of Public Utilities) current system. TrunkTracker fans can rest assured...it will be another Motorola system.
KCK now dispatches on the following 10 frequencies:
856.7625 856.9375
857.7625 857.9375
858.7625 858.9375
859.7625 859.9375
860.7625 860.9375

The BPU utilizes the next list of frequencies.
855.3625
855.6375
855.8875
856.3375
857.3375
858.3375
860.3375 (I didn't leave out 859.3375. It isn't listed anywhere...)
BPU does lots of data transmissions, and as far as I can tell, the 855.XXXX freqs are for that. They will not be part of the trunked system. The last 4 frequencies in the BPU list will suck up the 10 KCK frequencies, yielding a 14 frequency system. The logistics of moving an entire dispatch system are staggering enough when the radio system is left intact. To quote an over-used phrase, "Been there'done that." But to move AND update the radios at the same time is a real feat. That type of project requires 3 things to be successful...preparation, preparation and preparation. Repeaters will be switched off and on at various times, phone lines will be transferred, people will need to be at both dispatch centers during the overlap, and it must all take place without any significant interruption to normal activity. The information I have does not have any dates on it, so I can't tell you when this will take place.
Now...I wonder what will happen to TrunkTracker operation during and

after the transition. One could probably enter all 14 frequencies and
hope for the best, but both systems will be operating simultaneously for
a while...and we all know that a TrunkTracker listens to one system at a
time. One could also assume that the public safety radios are similarly
restricted. It appears that as frequencies are switched from the old
KCK system to the new BPU/KCK system, an appropriate number of KCK units
will switch over, also. This will avoid bunching up all the KCK units
on a shrinking system. As this happens, we will have to decide which
system to monitor and which one to abandon. No doubt we will miss some
traffic. All the good stuff will be on the one we are not monitoring!
Your guess is as good as mine whether the current TrunkTracker codes
for KCK will remain the same after the switch over, or if we will have
to start from scratch.

#4. I got some Wichita/Sedgewick County TT codes in the mail. She did
not have all of them, but here is what she has to offer.

Frequencies:
856.2625 857.2625 858.2625 859.2625 860.2625
856.4625 857.4625 858.4625 859.4625 860.4625
856.7375 857.7375 858.7375 859.7375 860.7375
856.9635 857.9625 858.9625 859.9625 860.9625

KHP 1360
KHP 1392
WPD 16
WPD 48
WPD Dets 80
Sheriff disp 240
Sheriff Dets 304
Ambulance 816
FD 656

Anyone out there have any more TT codes from there? I do not get that
way too often, so we must rely on YOU to provide that information.

#5. Here at work we have a commercial discone antenna mounted 105 feet
high on our tower. It is fed into our equipment room via a chunk of
hardline. While I was on a midnight shift, I connected my TrunkTracker
to it and poked in the KS trunked system in Topeka. The signal was not
great, but it was readable. From listening for an hour or two I was
able to confirm the following codes:

Frequencies

856.4875 857.4875 858.4875 859.4875 860.4875

KHP 144
KHP 176
CASP 720 Capitol Area Security Police
Sheriff 50176
unknown 944

Our radio guys haven't had time to run the cable from the scanner antenna into dispatch yet...they claim to have more urgent projects that need attention, like keeping the radio system up and running...maintaining the computers...doing installs in new police vehicles. Come on guys, get your priorities straight! ;-)

#6 Last, I heard a Troop A (Johnson County) KHP Trooper call the Johnson County Sheriff's dispatcher on TT code 1360 on JoCo's trunked system. Must be some sort of multi-agency talkgroup. Also, the target date for switching JoCo north zone (Merriam, Roeland Park, Mission, Fairway) was July 1. As of the 3rd, they are still on VHF, but they are still being simulcast on the 800 system'TT code of 80.

That's all this month...keep us informed of what you find.

295. 72 MHz - R/C Model Airplane Frequencies

Newsgroup: rec.radio.scanner
Date: 1997-07-03 00:00:00 UTC
From: "Kenneth L. Taylor" <ktaylor@reliable-net.net>
Message-ID: <33BBE7EE.3D30@reliable-net.net>
Source record: 192637

I need a hand held scanner that covers the 72 MHz
R/C model airplane channels.

Does anyone know where I can find one?

I have a Uniden Bearcat Sportcat - Model #: SC 150B.
It has 12 band coverage:
29.0 - 29.7 10 Meter Ham
29.7 - 50.0 Low Band
50.0 - 54.0 6 Meter Ham
108 - 137 Aircraft
137 - 144 Military
144 - 148 2 Meter Ham
148 - 174 High Band
406 - 420 Federal Gov.
420 - 450 70cm Ham
450 - 470 UHF Band
470 - 512 "T" Band
806 - 956 "800" Band

Can this scanner be modified to cover 72 MHz?

Thanks.

ktaylor@reliable-net.net

>

Just a side note, Cleveland Fire is simulcasting Fire Alarm Office
Dispatch only which is new channel 16, on old channel 5 (153.95Mhz). This
was made possible by the local Fire Buff group, it is unknown as to how
long this will be happening, as the dispatchers for the Fire Buff pager
system now have 800Mhz radios.

F O R S A L E

MOTOROLA MTX9000 fm handi-talkie radio,
model H01WCF4DB5AN NX type WCMA.
900mHz range. With charger and info.
Only $499.

COAX CABLE ---- heavy-duty, 1cm diameter, black plastic
covering, with foam dielectric. New, was on wooden spool
until I unwound it to get approximate length of 300+ feet.
No marking on cable; spool label says 1GHz. From cable
TV upgrade, probably 75 ohm. $ 50 shipped.

..... FOR YOUR DRIVING PLEASURE .....
1929 Mercedes SSK kitcar on VW chassis. Just completed, never titled.
Yellow, with brown fenders and running board, tan convertible top, side
curtains, and tonneau cover. Gold trim instruments.

COBRA 18-ULTRA CB ---- 40 channel, pushbutton tuning, with 3☐
NOAA weather channels. Includes microphone, but no mounting
hardware. $ 35.

LEXMARK/IBM PORTABLE PRINTER 5183 ---- powered by rechargable
battery or AC wall adaptor (included), this printer is only
11.5" x 3.5" x 2", and weighs about 2.5 pounds with battery
in place. Using silent thermal print head, it will print on
either thermal fax paper or on regular paper using the enclosed
thermal transfer ribbons. Very quiet in operation, and because
it runs on a battery, it is completely portable, for use with
laptop computers anywhere. Includes parallel port cable. $89.
.

ANADEX WORD-SCRIBE PRINTER ---- heavy duty dot matrix printer.
Multiple ports, but no literature so only parallel port in use
now. Tractor or friction feed. Fast, good quality; 17-inch
platten. $ 15

------------------- F L A S H L I G H T S ---------------------

4-D cell (2x2 style), krypton bulb. In box, never used.
$5 + shipping.

6-D cell multifunction lantern. Sleek tubular style with
bright incandescent light at end, 6W fluorescent bulb
along bottom, and flashing red and yellow on top. Also
has electronic sonic alarm that can be switched on with
the flashing lights. In box, never used. $12 + shipping

3-C cell Eveready worklight-style. Bright yellow with
hook for hanging, frosted bulb to diffuse light over area.
Unused, but no box. $5 + shipping

Batteries NOT included.....

COCA-COLA caps. Red cloth, white lettering. New.
$8 each + shipping. Only 9 available.

add shipping to all prices, only in US....
if interested, leave e-mail...

Check out the book "Monitor America". They have added the frequencies [
formerly from state police I believe] as additional duplex channels in
their normal format.

brpeter@ix.netcom.com wrote:

I have one of the RS Discone antennas in my attic plumbed to the
basement with about 35 ft of quad-shielded 75 ohm cable TV coax (also
from RS).

It seems to work fine, although I would like to add a wideband preamp.

I would be leery of installing the RS Discone out in the weather if
you live in an area that has any storm activity (it isn't that heavy
duty), but its great in the attic (hanging by heavier fishing line
from a hook at the peak of the roof).

I used standard "F" connectors on the cable and used adaptors to
connect to the antenna and radio. The quad-shielding seems to be VERY
effective at keeping things IN the coax and the only signals come in
THROUGH the antenna.

Any supposed "loss" due to the difference in absolute impedance is
more than made up for by the effectiveness of the qquad-shield (two
layers of foil. two layers of braid, alternating).

For my monitoring purposes, omin-directionality ALL OF THE TIME at
most ALL frequencies is more important than gain. I certainly
wouldn't want to have a log periodic I would have to point (but that's
my opinion in this circumstance).

Steve!

The Pro-60 is known for sucking the life out of batteries a little faster than other scanners. If you want some Ni-Cad's (rechargable batteries) that last long check their power rating. I have picked up some 800 mAh-"AA" format batteries from Rip-Off Shack and they last a long time. I have heard through word-of-mouth that there are some 1200 mAh batteries in exsistance and those would last a long time!!

If you listen to dispatch and they are bringing in Mutual Aid engines, usually they will direct out of area engines to the right frequencies, saying them right over the dispatch frequency. It takes a good ear to pick everything out! I hope these work for you! i just went down there from Santa Barbara on Wed via Amtrak and noticed how smokey it is down there! Good luck this fire season and happy monitoring!

311. Help! Need freq for KC Airport and area

Newsgroup: rec.radio.scanner
Date: 1997-07-04 00:00:00 UTC
From: mgraham108@aol.com
Message-ID: <19970704020501.WAA03661@ladder01.news.aol.com>
Source record: 192492

All,

I'm somewhat new to the scanner arena and need some assistance. I'm using my Bearcat BC960XLT to monitor air traffic in and around Kansas City (Missouri) International airport. I'm using the following frequencies:

125.75, 128.2, 118.9, 119.0, 120.95, 123.95, 124.7, 126.6 and 132.95.

Does anyone have additional frequencies for KCI? How about frequencies for the Kansas City Air Traffic Control Center in Olathe, Kansas?

Thank you! I appreciate your help for this novice!

Working from a PRO-2005 schematic (which should be essentially the same).
D-33 _was_ the AM detector. It supplied the audio for the AM mode and also
fed the AGC circuit, so your receiver isn't going to hear much.

The part description specifies a germanium diode with a manufacturer's
part number of OA90R or 1K261. Unless someone can supply an american
equivilent, your best bet is to call Tandy Natl Parts, (800) 442-2425, and
ask for D33 for the PRO-2006. Order a service manual at the same time so you
can figure out what you're doing.

Well personnally I think M@S@ is a trolling jerk but here's my one and
only AES story,Milwaukee headquarters. In 1992 I moved into a townhouse
sitiuation. I had rfi,so I grounded my 140S. That helped but no final
solution. Since I was working alot of hours,16+ a day I decided to order
The Bencher low pass filter and several snap on torroids for my
neighbors. the filter was about a 100$ and the torroids were'nt
bad.about 10$ for 4. This was the big Bencher,rated at 1500w PEP.
Naturally,I ran a 100 watts through it! In 94 I hit it with 600 watts
pep and it dead shorted to ground. Luckily I was watching the meters so
my rig and amp were ok. It had a 5 year warranty so I called Bencher in
Illinois. They told me too much power. I said 600 watts,it's covered for
1500. They told me quote "Too Bad,talk to AES". I called AES and
refrenced my receipt # and recounted my spiel. They told me to contact
Bencher,it's their warranty. I repeated my spiel. They then said there
was nothing I could do nor that they could do. I said that I could take
my business elsewhere,they said "Go for it". And I did,I've been dealing
with Ham Radio Outlet in Atlanta for 5 years now and they have put their
service and warranty commitment up front. They will beat most other
prices and I am confident I will stay with them for the long haul. I
will never deal with AES at all. For what it's worth. Jim KD4CDB

> How about 5, 25, or 50 Khz increments as in the Uniden 9000..? Any
> better?

As long as the step divides evenly into 30 you can receive the exact cellular frequency, although with 5 kHz steps you will search through many more frequencies than needed, and probably stop at some off-frequency. If you can't program 30 kHz steps (the channel spacing for cellular) 10 would be a better choice if you have it available. As far as 12.5, 25, and 50, they are rather poor, since you will only get exact frequencies when both 30 and whatever step you are using divides into the frequency you are receiving (such as 8xx.150, 8xx.300, 8xx.450, etc.). Of these step choices I would stick with 12.5 KHz since you will hit more frequencies even if they are a little off - the transmissions should still be audible.

Hi Kenneth,

> I need a hand held scanner that covers the 72 MHz
> R/C model airplane channels.

There are qute a few scanners that will give you the 72MHz coverage but you are going to be looking at the more expensive models that give continuous coverage from 25MHz+ (or lower).

Sets like the PRO-26 from RS and the Bearcat 3000XLT will do this and moving further up the price ladder IC-R10, AR8000 etc.

If you are looking at the less expenive models I think you will find the majority sold in the USA have the 29-54MHz coverage - when you look at the same models sold in Europe you will find they cover the 66-88MHz instead of this 29-54Mhz, other frequencies remain the same (The Bearcat 120XLT is an example).

If you didn't really want to go the expense of the "full coverage" units then sets like the AR1000, AR1500 that you sometimes see used will cover these frequencies but prices tend to hold a little as they also have the 800MHz that alot of people are after.

All the best

When someone asks about "the 800 MHz band" they are asking about
cellular.
So, the answer is, no.

: Brian Petersen
: brpeter@ix.netcom.com

Did you check the "White" channels at

154.265
154.280
154.295

which are used as inter-agency, working-fire frequencies, and usually too busy to make much sense of? I usually find transmissions to be very terse and urgent, without any IDs to help one visualize what is happening.

I normally do not keep them on my scanner just because they _are_ so busy, because then I would get to listen to nothing else; that is, I would have to turn down the RF gain too much in order to let a scan get past them. However, once you know there is a working fire, you can turn down the RF gain, and just listen to these, and probably hear more than you can keep track of.

Give them a try.

for the amateur equipments, AES is the biggest and greatest I think.

I ordered ADI's CPB262 (battery holder). I couldn't find it in other
stores at all. AES was the only one where had it in stock.

In most cases, you can find it on a local Ham repeater. Try posting
this question on one of the Ham NG's, I'm confident someone local can
give you the freq.

I have the AOR AR8000 hand held scanner. It covers all the freq's from 100kHz upto 1950MHz with no gaps it also does CW AM USB LSB WFM NFM and programable step rates from 50 hz upto 999.995 kHz. The cost in Britain is about £299.

```
With the a lenght of wire and a balun the shortwave is very good.

John.

That is true, although the radios transmit a digital signal, this digital signal is not encrypted in any way other then being a digital signal. If there was a "digital trunktracker" or whatever you would be able to listen to most of the Cleveland 800Mhz channels. It is true that some of the channels, mainly FIU are also encrypted in addition to being digital, I'm not sure about the Cleveland Police though.....

Message-ID: <01bc88b3$673855c0$61b698ce@Pscanist>
Source record: 192534

Guys,
If the ser # starts with ' 4500 ' or the CPU has a Uniden 1514-A, or a date
code
ends with a ' D ' this modifacation will not work.(maybe up to OCCD)
Also if the CPU is a 1514, and the mod is possible, make sure you
don't forget to reset the CPU.(hold 2,9&lockout and power up.)
Your best bet, in the used scanner market, is to find one with a date
code ending with a ' C ' ex. OEIC the C stands for the 1993
Hope this helps,
Eddie Kosloski

There is a command line you can type in, after entering the ScanStar program, that puts you directly into a scanning file. The added command follows <ss3 "enter">.

Anyone know what the added command is? I had to clean my macros, and lost the command.

All help is appreciated!

NO! Do not purchase the Radio Shack discone. All of the reports I have heard about/read is that it has poor performance in the low vhf band (30-50 mhz.). The Diamond knockoff of the ICOM discone is one of the better buys. The log periodic beam would be preferable but would require rotary capability for best performance. I have a 125 ft. tower and for the past 15 years have used many of the common antenna configurations and preamps. My comments would be took long for this newsgroup. If you have any further questions you can email me.

While reading article <33b937d3.6282379@news.bctel.ca>, I noticed that
masa@writemeNOSPAM.com said the following:
>I ordered one small accessory through AES (Amateur Electronic Supply).
>
>It took them three days to respond to my order. I didn't receive
>the product. I called the office a week later. They told me that
>they placed the order and they needed someone to go to the post
>office.
>Now, they tell me that they don't have any records of my order.
>I have received nothing. It's two weeks now.
>Beware of AES.

I've ordered many, many things from AES over the years and have never had a
problem of any kind. My last order was about as small an accessory as you
can get: a DC power cord for my Yaesu FT-530, about $7.00. Arrived via UPS
in the quoted time, just as expected.

In short, AES is very friendly and very knowledgeable, about the only complaint
I have is that they wouldn't buy my old Yaesu FT-411E to sell as used.
(Something about them already having three... ;-))

From: john lee wilson <jwilson9@erols.com>
Message-ID: <33BD561B.FC4@erols.com>
Source record: 192643

I have tried most of the common antenna configurations with
different preamps over the years and still use Diamond/Icom discones,
quads, yagis, ground planes and Scantennas on my 125 ft. tower. If you
wish to improve your monitoring in this case 46 mhz., the Scantenna
monitoring antenna is reasonably priced and works well in that frequency
range. It is somewhat directional. Radio Shack sells a very good
pre-amp for low, high VHF and UHF TV for about $45. The Scantenna
accepts 300 ohm input and the Radio Shack mast mount preamp is 300 ohm.
The output is 75 ohms and I use RG-6 coax cable. Both items work very
well from 25-800 mhz. with one exception. The Scantenna does not work
well on the 406-420 mhz. range. Mount your antenna as high as
possible.

Source record: 192644

For Sale

Radio Shack Pro 2038 base/mobile scanner:

Service search (Police, Fire/Emg, Air, Marine, Weather, Private)

50 channels, 20 of which can be any category (Private-user defined)
10 of which are Fire/Emg (user defined)
20 of which are Police (user defined)

Band search (Mhz ranges)

29-30
30-50
50-54
108-137
137-144
144-148
148-174
406-420
420-450
450-470
470-512
806-956 Mhz

Comes with antenna and AC adaptor. Accepts AC power cord (avail at Radio Shack) for car use. Unit also had flip up stand so it can sit up at an angle. Unit does not come with any car mounting brackets. This unit is pretty much the same thing as the Uniden BC-700A in terms of features and layout.

This unit is BRAND NEW IN THE BOX. Never been opened. I can and probably will open it just to make sure it works before I ship it out.

Terms:

* Will take offers until Monday morning 8 am eastern time
* Prepayment by check required (sorry, no cod's)
* Make your offer to INCLUDE the price of shipping (roughly $10).
* No offers below $80, please.
* If I receive an acceptable highest offer by Monday, July 7, I will definitely email that individual on Monday to confirm the offer and make further arrangements.

Thanks for reading and bidding.
Mike

I've been trying to modify the mdtstuff.c source code so that it will work on either COM3 or COM4, but have had limited success. Has anyone been able to do this? If so, a copy of the modified source code would be greatly appreciated.

Thanks!

I have had a couple of minor problems with AES. Both were solved by
using some good buying practice. Suggest next time you buy from
AES, or any other ham dealer you follow these practices:
1. Always purchase using a major credit card. It leaves you at an
advantage if there's a problem.
2. Have the sales agent write on you order: CANCEL THIS ORDER IF

NOT COMPLETED WITHIN TEN WORKING DAYS. Do not let him talk
you out of it. Assume any order older than ten days is gone.
3. Any equipment that is to returned for warranty repairs should
also include a letter to the dealer and the credit card company
requesting that payment be held until repairs are completed
and equipment is working properly. This may get you some
cuss words from the service manager. Good luck with
shopping. Dave

>I have a BC890XLT by Uniden does anyone know if it can be converted to
>full freg. And how ? Thanks Danny dmarti49@alltel.net

I just purchased a BC 890XLT. I found a blerb of 800 MHz restoration.... I
tried it last night, but no luck.....
I'll include the mod here... But unless I did something wrong, It doesn't work:

BC890XLT-800MHZ FULL RESTORE

1. REMOVE ALL CABINET SCREWS.
2. REMOVE 4 FACE PLATE SCREWS AND 1 BRACKET SCREW AT CENTER OF MAIN BOARD.
3. CAREFULLY DEPRESS THE OUTSIDE EDGES OF FACEPLATE SHIELD AND TILT DOWN.
4. UNPLUG J4 AND J5 AND RIBBON CONNECTORS J501 J502 AND J503.
5. REMOVE FACEPLATE AND LOGIC BOARD.
6. POSITION BOARD SO MICROPROSSOE CHIP IS ON LEFT AND MEMORY BATTERY ON RIGHT.
7. LOCATE THE 3 CHIP RESISTORS AT CHIPS UPPER RIGHT..MARKED 104 AND
CAREFULLY DESOLDER.
8. INSTALL THE CHIP RESISTOR AT THE 2 EMPTY PADS CLOSEST TO MEMORY BATTERY.
9. REASSEMBLE CAREFULLY IN REVERSE ORDER.
10. TEST BY ENTERING FREQ. AROUND 870 MHZ.

Perhaps the micro has been permanetly program to exclude portions of 800
Any one else have ideas.....
<szinn@voicenet.com>
MHz.....

Too Bad. It looks like you have the UN-modifiable version.

There were 3 different types:

20-148 (3-pwr wires, REALISTIC nameplate)
20-148A (Detachable pwr wire, RS nameplate)
20-148B (Same as the 148A above, NOT modifiable)

Only the 20-148 & 20-148A versions have L201.
The 20-148B's CPU is a B-version. Cell not even programmed in here. Post 1994.

'nuff said,

skweezieweezie.

Does anyone have the unit ID numbers of the Cook County (IL)Sherrifs Police? I wonder if the Illinois State Police use any special heirarchy when assigning their unit ID numbers. I know the first numbers are the District assigned. Any help here?

yeah they missed me off too.... I was trying to buy a HF rigs from
AES, but they made me not to buy them from AES.

I told them that I would cancel the payment if the thing wouldn't
clear up. They didn't respond until I sent this notice.

>2. Have the sales agent write on you order: CANCEL THIS ORDER IF

be sure to cancel your payment too. don't make them take money from
your pocket.

>3. Any equipment that is to returned for warranty repairs should
> also include a letter to the dealer and the credit card company
> requesting that payment be held until repairs are completed

good idea. this is a very good idea. I will remember it.

Can I get a list of fast food frequencies, in the Sacramento area, particulary near the border between Del Paso Heights and Sacramento City? I live near a Jack In The Box, a MCDonald's, several gas stations, and a small supermarket, plus a Chinese restaurant. I know you can search between 30 and 40 and 150 and 160 but I still haven't heard anything except static, even frequencies my scanner did stop on. I don't use an external antenna, just the rubber duck one it came with, a Uniden model. Thanks.

You are getting "images". Many scanners can receive such signals. Thet
are caused by the internal circuitry of the scanner.

I've delt with AES several times. Went to their stores in Milwaukee,
Orlando,Clearwater and Las Vegas. Never had a problem. The guy in Vegas
(N7GBJ, Tom) even gave me cheaper sollution for the stuff I needed.
Very happy with their service, I'll certainly do bussiness with them again.
Same goes for JUN's in LA.

If you doe a lot of bussiness somethin WILL go wrong every once in a while, I
make mistakes too... ;-)

Fast Food Frequencies are the same through out the entire US.

The most common frequency pairs to check are:

30.8400 --- 154.5700
31.0000 --- 170.3050
33.1600 --- 154.5100
33.4000 --- 154.5400
35.0200 --- 154.6000 *
154.5700 --- 170.2450 *
154.6000 --- 171.1050 *
457.5375 --- 468.3875
457.5500 --- 467.7750
457.6000 --- 467.8250
461.0375 --- 466.0375
460.8875 --- 465.8875
461.0875 --- 466.0875
469.0125 --- 464.0125 *

If they're using "3M" or "GM" headsets then you need to search
from 920-922 Mhz Wide FM for the speaker frequency and from
903-905 Mhz Wide FM for the headset frequency.

An ariticle on Fast Food monitoring appeared in the August 96
issue of Monitoring Times. It can be view online at the
following URL http://www.grove.net/fastfreq.txt

This list covers most Fast Food chains across the entire US.

That's my point exactly. The socialists that run the state have seen it fit to pass laws affecting every aspect of human behavior. The state motto should be "Land of 10,000 taxes and government regulations."

I know, since I was born and raised there. The heavy (liberal) hand of government was one of the major reasons that I left the state.

But you shouldn't need one. Why in the world should you have to ask for permission from the government for the right to receive radio signals? This is the kind of thing that happened in the USSR and Nazi Germany.

For the same reason the govt. doesn't want you to own a gun. We don't
control it, it controls us.

Day by day, we lose more and more rights, and when you finally don't have
a gun or ammo you won't be able to do anything about it.

H Higgins

You're almost there! Just hit the button that has the "up arrow" or the one that has the "down arrow" on it and hold it down for a second. As you can probably guess, the up button starts the scanning by ascending frequency and the down button does just the opposite.

On a separate note, how do you find the sensitivity of the Pro-60? I had a Sport Cat (?) that I traded to a fellow at work who had bought the Pro-60 'cause he and his wife wanted to be able to listen to cell phone calls and I HATED the cell phone transmissions interrupting Arkansas State Police transmissions, which was a problem on the Sport Cat and the Pro-34 also. Anyway, I loved the triple conversion of the Pro-60 so I traded the Sport Cat to him (plus cash, of course) for the Pro-60. However, it doesn't seem that the Pro-60 is as sensitive as the Uniden or even the Pro-34. How would you compare the Pro-60 to your Uniden?

Cross-posted to: rec.radio.scanner,rec.radio.swap

FS: 2-month old Pro-2042 with OS-535 installed*. $650, includes shipping via fedex 2-day COD in the lower-48. Comes only with demo versions of software, but is otherwise ready for plug & play computer-controlled scanning. Physical condition is mint, comes with original box, manuals, etc.

This is an excellent scanning combo...I'm only selling because I bought an Icom 7100...

Fedex COD will accept only cashier's check or postal money order.

Please respond via EMail.

*Installed by me, btw...I work in electronics industry, and I do excellent work ;-)

t.tracker is your best option. Cheaper and can actually follow the trunking groups. I have one and love it. Plus gives 300 ch. cap. Also allows you to decide what subgroup/fleets you want to listen to :ie. can lock out dog catcher and sewer "rats". I have most of Dayton,OH & Montgomery Co. Ohio group codes if any one needs them.

I have never used that scanner, but if it recieves 800MHz, then it will get trunks. You will have to listen to realitivly small trunks, because the scanner will not automatically keep with with the indevidual conversations, you will hear ALL the conversations. You will have to program all the trunked repeater outputs into your scanner with NO DELAY. Good luck.

What is that beeping sound that occurs between calls on their
frequencies?
What is it's purpose?
It seems that if someone talks when the tones are on, the tones start
over when the talking is finished.

Is there a way of connecting my Pro-2005 to my computer to get all
MDT messages?

437. trunk tracker mystery

Newsgroup: rec.radio.scanner
Date: 1997-07-05 00:00:00 UTC

Message-ID: <19970705173101.NAA09622@ladder01.news.aol.com>
Source record: 192710

I seem to be having an intermittant problem on two of the four trunked systems I monitor.

Occasionally when entering trunked mode, the radio can not seem to find the data/control channel. It just keeps cycling through the frequencies, but never goes in to track mode. I have tried:

re-entering the freqs, no help
setting it to trunktrack at different squelch settings - nada
manually stepped through the frequencies. I hear what I believe to be the data/control channel, but still no tracking.

Any suggestions ???

BTW, this is an intermittant problem- sometimes it works just fine....

I would check the ant and squelch.
If it can't hear the data channel it will not lock up.

Ben

Scan the 2 meter frequencies between 144.00 and 148.00, some amateur radio clubs re-transmit the coms. If you have shortwave listen on single side band on one of these:

3.860
7.185
14.285
14.295
21.390
21.395
28.650

Your best bet is the first 2 freqs. This is the Goddard amateur radio club in Greenbley Maryland. My web site has a link to their site.

Tom

For informational purposes, the radio shack discone has, covered by a
rubber cap on top, a place to screw on a HF whip or rubber ducky. This
takes care of the above problem. Mine had that problem and when I screwed
in the HF whip on top it took care of it. It has been a great performer
with my pro-2006.

happy scanning!

Turn the set off and then on and see what happens.

IT could also be the center pin in your antenae...it could be loose...don't take it off or else it will fall out and then you will lose it and where will you be then?

try another antennae with a better center pin affixed to the base....if that is the problem.

bill

Hi Rick,

If your scanner has side band, then you could put it on USB
and shift the frequency 4.5 khz below the frequency you are
monitoring:

46.730 = USB 46.7265

Rick,
Call Ramsey Electronics at 716-924-4560 and order a SS-70A Speech Scrambler/Descrambler kit and enclosure for about $55. Warm up your soldering iron and build this baby in about one evening's time. Or pay $80 for a wired and tested version and plug it into the SPKR OUT or LINE OUT of your favorite radio and then begin "filling in the blanks". I've found that regular unscrambled cordless is usually more interesting though. Nice thing is you can buy two of these and make a "secure" radio link with another unit (not on ham bands though, illegal). Mine works great, cold solder joints and all!

If you're having trouble with the thing, I suspect there's a good chance it's something OTHER than the membrane. I sent mine in for repair for this problem maybe a couple years ago. Now, it's back. So I took it apart and very carefully cleaned the thing. No change.

I think the sensing circuit is screwing up somehow.

Oh, and I was charged around fifty bucks for whatever they did. I'm not eager to give them fifty bucks again if the fix lasts less than two years.

Absolutely NOTHING! Whenever someone can't disprove your point
intelligently, they either call you names, or point out something that
has nothing to do with the topic! This person is also probably an
English Teacher, as no one else cares so much about misspelled words or
punctuation, others just pay attention to the point being made.

For the same reason you can't type in ALL CAPS, it pisses these people
off for some reason and I can't figure it out either so don't worry
about it. Next they will tell you not to use the letter "E" anymore!

He meant to type "pissed off" but I was able to figure out what he meant. It amazes me how english teachers can't get past spelling errors and just pay attention to what is being said.

Dear Mr. Masa,

International Air/PP shippments must be hand carried to the Post Office
with appropriate customs forms filled out. The small delays are easily
offset by the price advantage compared to other carriers such as
UPS/FEDEX etc. The biggest disadvantage is that the International Postal
Union is no where near as streamlined as the commercial Air Carriers
regarding Customs. You package is probably stuck in that huge Customs
center in Burnaby, BC.

No, I don't, but it's a pretty safe bet that it's digital bursts way up in the Giga or Tera Hz region. Way beyond what most scanners are capable of, and at Extremely low signal levels.

Mark

The truth as I perceive it to be.

Mine is fine throughout the spectrum.
Of course the little rubber duckie antenna prefers the higher
frequencies.
But that is the nature of compact antennas....have never seen one that
worked efficiently in more than a small segment of a wideband
receiver's range.

Treerat2 wrote:
> what frequency range do they usually operate on?

The most common frequency pairs to check are:
30.8400 --- 154.5700
31.0000 --- 170.3050
33.1600 --- 154.5100
33.4000 --- 154.5400
35.0200 --- 154.6000 *
154.5700 --- 170.2450 *
154.6000 --- 171.1050 *
457.5375 --- 468.3875
457.5500 --- 467.7750
457.6000 --- 467.8250
461.0375 --- 466.0375
460.8875 --- 465.8875
461.0875 --- 466.0875
469.0125 --- 464.0125 *

If they're using "3M" or "GM" headsets then you need to search
from 920-922 Mhz Wide FM for the speaker frequency and from
903-905 Mhz Wide FM for the headset frequency.

483. Best antennas to use with Scout??

Newsgroup: rec.radio.scanner
Date: 1997-07-06 00:00:00 UTC
From: ALANOUE@SHRSYS.HSLC.ORG
Message-ID: <6JUL97.23580600@shrsys.hslc.org>
Source record: 192358

I recently got an OPTO Scout and was wondering which antenna(s) have worked
well for users.
Is there a good overall VHF-UHF antenna? How about for 800MHz?
Any input would be appreciated.
Thanks,
Phil

484. cell 12.5 or 30 mhz

Newsgroup: rec.radio.scanner

We are a New York based international photo agency representing professional and amateur photographers in search of having their work promoted in order to conduct their profession or hobby minus the time consuming inconvenience of presenting and selling their own work.
You do not have to be a professional photographer to sell your photographic work successfully, and as any pro will tell you, quite often throughout history an amateur stumbles on a scene that he or she photographs and ends up with a photo that becomes a classic. Those who publish magazines, books, newspapers, greeting cards, record albums, or just about anyone who works with images in their profession, are in desperate need of fresh material, and are more than willing to review photos submitted by professional photo representatives. Sometimes the photos of amateurs are sought after more so than professionals because of accidental originality and innovative >themes.
At Photo Phoenix International, we delight in and value the work of people who view photography as a fine art and understand a photo representative's significance in terms of a photographer's career, reputation, and monetary gain.
The photos we are seeking are some of the following: ANIMALS, ARCHITECTURE, ART, AUTOMOBILES, BUSINESS, CELEBRITIES, DOCUMENTARY, ENTERTAINMENT, EROTICA/NUDITY, FASHION, FOOD, HEALTH, HISTORY, HOBBIES, OUTDOORS, PEOPLE, POLITICAL, PORTRAITS, STILL LIFES, RELIGIOUS, SCIENCE, SPORTS, TRAVEL . . .
Whether your work portrays conservative, experimental, stylish, or innovative themes, your project proposal should be well thought out before submitting to us.
For first contact, submit a query letter and "SAMPLES ONLY" of your photos.
You must include "2" self addressed, stamped envelopes--one for correspondence, the other for the return of your material should we not be interested.
If we think your work is sellable, we will respond as soon as possible. Do not send entire portfolio unless we ask for it.
SEND TO: Photo Phoenix International

You all have to remember something.. We are all not in the SAME country!

What Barry posts from Australia may not be correct in the USA. Same for the posts from USA to him. He is NOT wrong, he is in another country.

Barry, I've seen your replies to many posts with "wrong" answers because of this.

Remember the internet is GLOBAL! It would be better if when asking or replying to a post you put your location so the person(s) answering can do so with correct answers for your country.

507. ****CABLE DESCRAMBLING PLANS HERE******

Newsgroup: rec.radio.scanner
Date: 1997-07-06 00:00:00 UTC
From: eugened@aol.com
Message-ID: <19970706011801.VAA29891@ladder02.news.aol.com>
Source record: 192398

>>>>>>>>> CABLE TV DISCRAMBLER <<<<<<<<
>
>Build a cable TV discrambler with only 7 Radio Shack
>parts for UNDER $12. #MS101
>Complete Instructions and illustration only..... $12.95
>

HERE ARE THE PLANS FOR FREE

-

These plans originated in 1985:

These plans are actually for a notch filter. One of the early systems
for
running a premium channel was to put a jamming signal on the lower
sideband
of the video for that channel. The signal did two things. First,
because it
was about 1 MHz below the video carrier, you got plenty of
interferance to
obscured the picture. And second, the frequency was also 4.5 MHz below
the
color subcarrier so it overrode the regular sound.

-

Due to different scrambling systems, you might find it neccesary to
change
the range and values of the variable capacitator.

MATERIALS REQUIRED:

* 1 Radio Shack mini project box (#270-235)
* 1 1/4 watt resistor, 2.2k 2.4k ohm (RS #271-1325)
* 1 75pf - 100pf variable capacitor (Very hard to find!)
* 2 F61a chassis type coaxial connectors (RS #278-212)
* 12" No. 12 solid copper wire
* 12" RS59 coaxial cable

INSTRUCTIONS:

1. Bare a length of No. 12 gauge solid copper wire and twist around
a
3/8" nail or rod to form a coil of 9 turns. Elongate coil to a
length
of 1 1/2" and form right angle bends on each end.
2. Solder the variable capacitor to the coil. It doesn't matter
where, it
still does the same job. The best place for it is in the center
with
the adjustment screw facing upard.
3. Note: When it comes time to place coil in box, the coil must be
insulated from grounding. This can be done by glueing a piece of
rubber to the bottom of the box, and securing the coil to it.
4. Solder 2 pieces of copper wire at points 2 1/2 turns from ends of
coil
and solder to coaxial chassis connectors, bringing leads through
holes
in chassis box. Use as little wire as possible.
5. Solder resistor to center of coil and ground other end to chassis
box,using solder lug and small screw.
6. Drill a 1/2" diameter hold in minibox cover to permit adjustment
of
the variable capacitor from the outside. Inspect for mistakes and
place cover on and tighten securely.
7. Place device in line with existing cable on either side of the
converter box and connect tv set with the short piece of RS59
coaxial
cable. Set tv set to HBE channel.
8. Using a PLASTIC screwdriver, adjust the variable capacitor until
picture tunes in. ENJOY!!!!!
9.

DIAGRAM:

The mini box

```
-----------------------------------------------------

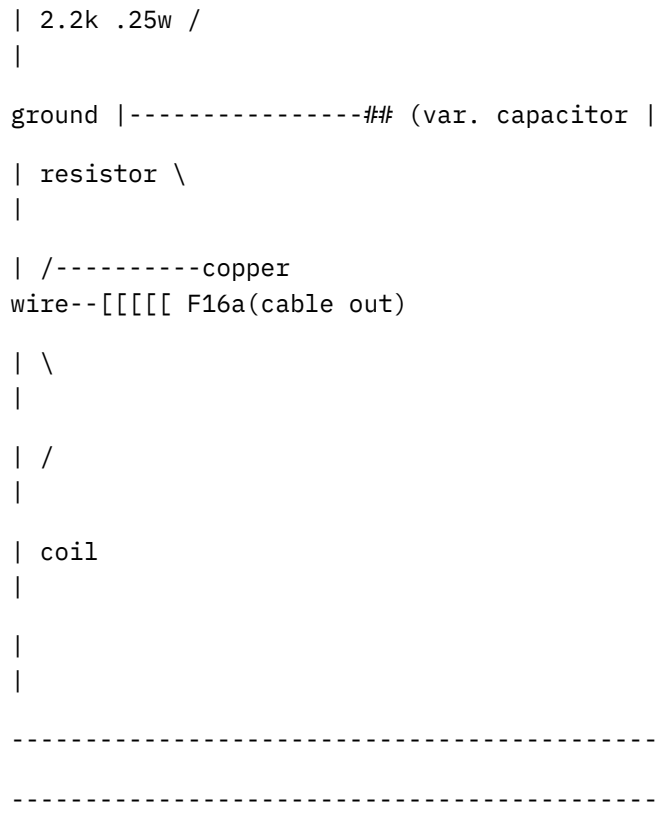
|
|

| coil
|

| \
|

| /
|

| \-----------copper
wire--[[[[[ F16a(cable in)
```



-

Very few areas utilize this scrambling method. If you are in one of
these
areas save yourself the headaches and purchase a notch filter. Good
Luck.

PLEASE LET ME KNOW IF THESE PLANS WORK FOR YOU!!!

-=-=-=-=- TRUNK TRACKER MEETING NOTICE -=-=-=-=-

If you've tried to join the last couple of meetings it's more then likely that you've been greeted by an error message at the front door. It has come to our attention that the chat room host has been performing server maintenance during what would have been our meeting start time. Although unaware of this at the time, we have made the necessary adjustments to assure that this will not happen again in the future (knock on wood). Now on to the good news.

When are the meetings? The meetings will be held 'every' Monday. The next meeting is: Monday July 7th @ 8:00pm PST (We are also working on a more appropriate start time for our east coast friends)

Where are the meetings? There are two ways to join:
(1) Goto Intercept: http://www.wolfenet.com/~daydream/ and click on "Chat Room"
(2) Use a IRC client to connect to webmaster.ca.us.webchat.org and join channel: #Intercept If you are in need of a IRC client or are looking for more information on IRC try the MIRC home page @ http://www.mirc.co.uk/

The meeting is a great place to share your talk group ID's, engage in general and specific trunked radio system discussion's, and to just have a good time. All monitoring enthusiasts are welcome to attend, hope to see you at the meeting.

-Marcus

KEgan30306 <kegan30306@aol.com> wrote in article
<19970705173101.NAA09622@ladder01.news.aol.com>...
: I seem to be having an intermittant problem on two of the four trunked
: systems I monitor.
:
: Occasionally when entering trunked mode, the radio can not seem to find
: the data/control channel. It just keeps cycling through the frequencies,
: but never goes in to track mode. I have tried:
:
: re-entering the freqs, no help
: setting it to trunktrack at different squelch settings - nada
: manually stepped through the frequencies. I hear what I believe to be
the
: data/control channel, but still no tracking.
:
: Any suggestions ???
:
: BTW, this is an intermittant problem- sometimes it works just fine....
:

I have this problem on one of the four data channels. Our local system
uses about 15 channels, four of these are used for data channels (one at a
time and rotated daily). Only one particular channel will not permit
"trunk tracking" when it is selected as the data channel. It appears to be
just as strong a signal as the other three... Very puzzling!

they are probably using frequencies in the GHZ range not receivable by a typical scanner..also, the data is comming down encoded or compressed in some way

And in Italy, 1997. You have to pay a tax (100$/year) to receive
radio-broadcasts (TV, Fm commercials, Am, short wave), to get a
licence to receive legally ham radio bands, and other bands are
absolutely not allowed under any condition.

Eh, old Europe :-)

We are a New York based international photo agency representing professional and amateur photographers in search of having their work promoted in order to conduct their profession or hobby minus the time consuming inconvenience of presenting and selling their own work.
You do not have to be a professional photographer to sell your photographic work successfully, and as any pro will tell you, quite often throughout history an amateur stumbles on a scene that he or she photographs and ends up with a photo that becomes a classic. Those who publish magazines, books, newspapers, greeting cards, record albums, or just about anyone who works with images in their profession, are in desperate need of fresh material, and are more than willing to review photos submitted by professional photo representatives. Sometimes the photos of amateurs are sought after more so than professionals because of accidental originality and innovative themes.
At Photo Phoenix International, we delight in and value the work of people who view photography as a fine art and understand a photo representative's significance in terms of a photographer's career, reputation, and monetary gain.
The photos we are seeking are some of the following: ANIMALS, ARCHITECTURE, ART, AUTOMOBILES, BUSINESS, CELEBRITIES, DOCUMENTARY, ENTERTAINMENT, EROTICA/NUDITY, FASHION, FOOD, HEALTH, HISTORY, HOBBIES, OUTDOORS, PEOPLE, POLITICAL, PORTRAITS, STILL LIFES, RELIGIOUS, SCIENCE, SPORTS, TRAVEL . . .
Whether your work portrays conservative, experimental, stylish, or innovative themes, your project proposal should be well thought out before submitting to us.
For first contact, submit a query letter and "SAMPLES ONLY" of your photos.
You must include "2" self addressed, stamped envelopes--one for correspondence, the other for the return of your material should we not be interested.
If we think your work is sellable, we will respond as soon as possible. Do not send entire portfolio unless we ask for it.
SEND TO: Photo Phoenix International

Well, having lived in Albany, NY all my life I had a few experiences with Scanner World. The equipment they sell is great, but don't count on their service or help for any thing after they have your money.

I won't get winded with all the details, but I have made several purchases from them over the years, when I needed to return a few items because of defects, I had major problems. These returns were within hours of an over the counter purchase.

If you are going to make the purchase via mailorder, I would strongly suggest another company. There are plenty of them to chose from.

The only beeping sounds on their system that behave like that are the repeaters periodically transmitting their call sign in morse code. You are quite right that if someone transmits while the repeater is IDing, it will try again when their transmission ends and continue trying until it can send the whole thing. On a busy channel, I've heard it trying to for over 10 minutes to send the full ID. Quite annoying...

I have visited it. It does have some interesting stuff. But most people manage to use up one line of .signature with a pointer to their web site, in a total of 4 lines or less of .signature. Masa uses 16, and I don't see how all that extra text contributes any extra value to the reader. I'm sure it makes Masa feel better, though.

-
My 2 cents, . , . , .
Sorry, , , , I am NOT an English teacher, but I DID learn how to
spell, and how to punctuate. While I'm not infallible, I do trip up
occasionally, , , , , the misspelling I see on the net tells me that
the "English teachers" obviously didn't do their work. The net is
about COMMUNICATION! You can't communicate properly unless you can
SPELL!! And I don't give a damn HOW you try to justify it. If you
can't spell, then you can't communicate. PERIOD! I can't guess at
what you are trying to say, , , , You have to COMMUNICATE it to me in
WORDS!!! Properly SPELLED!!!! Obviously, Masa, , , Either English is
not your first language, , , OR, , , You are trying to bring everyone
else down to your level. Stop trying to justify your lack of spelling
skills, and just learn how to spell.

Multiple fire departments? Yeesh! You must be Pager Man or something
like that.

> Does anyone know of a unit or schematic for a multiple tone pair
> decoding so I don't have to leave all my minitors on all the time??

I don't know of any... sounds like a scanner tuned to the dispatch
channel may be your best bet -- given that you can tolerate the dispatch
tones.

I recently noticed that my pro-51 is not scanning in hyper mode....I
noticed this after I programed in about 25 channels....I started to
troubleshoot this problem..I found that if I squeezed the back side of
the battery compartment that it would scan faster....So i bought some
new ni-cad's thought it might be a battery problem......Is there a clip
in the battery compartment that is just not making connection or what
could be the problem.........crimson@gte.net

If I were traveling from NY to FL I think MN is a little out of the way!

It's nice to see replies about other pinko-commy state laws BUT the
question was "between NY and FL etc etc have anti-scanner laws"..
I bought a book from Scanner Master that lists the laws (at least current
when they published it) for each state.
Most cases it's real easy, get your amateur radio license goto
http://www.arrl.org for info on how to do it.

For sale: Radio Shack pro-39 scanner. hyperscan. 200 channels.
30-54 108-174 380-512
806-823.9375 851-868.9375 896-960
this scanner receives cellular unmodified. it is a really
reliable and easy to use radio. $250.

from Radio Shack catalog:

From the 1994 RS catalog: "Features exciting 800-MHz band, HyperScan search and scan, 10-channel monitor bank, prioroity channel, lockout function, scan-delay, and LCD display with backlight. Keyboard lock prevents accidental programming changes. Memory backup circuit keeps the frequencies stored in memory, even when you change the batteries. Belt clip, detachable flex antenna, BNC jack for mobile or outdoor base antenna, earphone jack. There's also a built-in Ni-Cd recharging circuit. 5 3/4 x 2 3/4 x 1 5/8". Requires 6 "AA" or rechargeable batteries or AC or DC adapter."

it has high capacity batteries installed. make offer.

551. Yaesu FT-8100 dual band prohibited freqs

Newsgroup: rec.radio.scanner
Date: 1997-07-06 00:00:00 UTC
From: Steve S <kf4nnq@hotmail.com>
Message-ID: <33C011F3.28A6@hotmail.com>
Source record: 192442
Cross-posted to: alt.radio.scanner,rec.radio.scanner

In reading the ad for the FT-8100R, which is a dual band amateru mobile rig with wideband receive of 110-550 MHz and 750-1300* MHz, I noticed an addition to the usual asterisk disclaimer:
"*Cellular & 900 MHz Cordless Phone frequencies blocked"
Now, is this a new trend in adhering to the ECPA? Does this radio actually have all 900 MHz cardless channels mapped out for exclusion? Remember, a lot of hams want 902-928 MHz coverage for the co-use band up there so how do you not interefere with that? Will we see other manufacturers start blocking selected portions of the 902 band?

Any comments welcome.

556. ARRESTED for 902 MHz

Newsgroup: rec.radio.scanner
Date: 1997-07-07 00:00:00 UTC
From: Paul Racine <racine@ibm.net>
Message-ID: <01bc8b26$8b7a56c0$d6ca2581@willy>
Source record: 192297

WARNING TO SCANNER ENTHUSIASTS

Recently a friend of mine was arrested for listening to our HAM band 902-928 MHz. Does this sound farfetched?

One evening my friend was scanning the 902-928 MHz Ham band with a popular STANDARD brand amateur radio, looking activity while doing some work on his computer. The radio stopped on a station which was later identified to be a cellular phone call. It was also discovered that the call was being made by a friend of my friend. So naturally, my friend mentioned to his friend that he heard him on one of our HAM bands one evening while sitting in his shack. About 2-3 hours later, the local law enforcement agencies (city, state, and sheriff---12 officers total) arrived at his home with a search warrant for wire tapping equipement. My friends scanners and computer (yes, his computer, too) was confescated and my friend was placed under arrest 3 days later.

My friend is STILL in the process of clearing his name and spending several $1000 on attorney fees. Just recently (within the last 2 weeks, he received his equipement back. But charges are still pending. Not to mention, he lost his job in the process.

THIS IS THE TRUTH. I could not believe that something like this could EVER happen. Now I know that when I listen to my scanner, it will be done in private and I WILL NOT discuss anything I hear with NOBODY! Not even a close friend.

BE CAREFULL!!

Source record: 192302

Has anyone experimented with length of radials for the radio shack discone for tweaked performance? I have just replaced a few of the radials that had dropped off with stainless steel rods and thought there may be advantage in resizing either the horizontal or ground elements. Also worth mentioning, a GM AM antenna (screw on type) can easily be taped out to fit on the top nut of the discone for a vertical element.

Any input would be appreciated.

Mark

Jaysun,

The Mars Pathfinder lander and rover use a UHF link of 459.7 MHz, and
414.7 MHz to talk to each other I believe.

I recently acquired a Standard AX400 and am enjoying it a great deal.
Quite an impressive little radio.
Now my problem: the instruction book is in Japanese.
Does anyone out there know if Standard will sell the English version
of this book separately, or does anyone have a book I could copy? I'll be
glad to pay postage both ways.
Many thanks.

> I need a code list, can anyone help me?

Jesse:
I am sorry you received callous messages in response to your question. There are people who look at a question like yours as an opportunity to belittle.
Your question implies that you are new at scanning. There is a book called "Police Call Plus Beyond Police Call" available at your Radio Shack store. It has a listing of the codes used by Police in many communities. It is the last section of the book and is called RADIO CODES AND SIGNALS. While the APCO "10 Codes" it lists are common in many places, each police and fire organization tailors codes for themselves. Just by listening to the agencies in your area, you'll come to find out what THEIR 10-10 or Code 4 or Signal 38 means, but look at the 15 pages of Codes and Signals in the Radio Shack book; they'll start you off.
Don't take the responses you got to your question to heart. There are many of us here who will give your questions the attention they deserve. That's how we learned. Ask away.

Source record: 192450

I Have just acquired a Handic 009 and would like to know
something about it.
My guess is that it is early 70s vintage.
Made in Sweden....desktop style...runs on domestic power.
The only controls are a vol/on switch, a squelch knob, a scan/manual
toggle and a row of 8 toggle switches with corresponding red lights.
Front speaker. Rear label says it should work VHF and Uhf.
The 8 switches are bracketed and labelled "program"
With the squelch off, I get audio but I do not have the faintest idea
how to get it to receive.
Would appreciate any help on history....would kill to know how to
operate it.
I own a number of working scanners. This one was bought out of a sense
of history....and curiosity.
Thanks
Brian

Dan,

By FCC regulations, police/fire/public service/ham radio repeaters are all required to ID their call letters after certauin time intervals. For ham radio, it is at the end of a conversation or every 10 minutes if the conversation is longer than 10 minutes. Ham radio repeaters must ID at least every 10 minutes since they could be "conversing" at any time.

For police and fire, the departartments also must ID their station call letters either by morse code or by voice, although I'm not sure of the minimum time interval. Around Columbus, Ohio, it seems to be every 15-20 minutes or so. Some of the smaller departments ID by voice every time a emergency run is dispatched, then also during a "radio and time check" at least once a day.

I hope this helps. Happy scanning!

Yes all repeater systems are required to identify themselves. I'm not
sure of the time intervals required...but amateur repeaters require
ids every 10 min. I believe the police repeaters are requred to id
every hour. The morse code is just to speed things up that much
more... usually a PL isnt added to the ID so that the officers dont
have to hear it but it does get xmitted

hi sebastien,

pls. checkout the aussie scanner list-server, witch is located in zuerich.
mail me for detailed -free- login procedure. there is just on problem ;-)
it's a german language list-server. but here, you will find pocsag decoder for
win / dos and mutch more.

regards
harry dutch

I am a collector of slot machines, jukeboxes and other unusual old coin operated machines. I buy machines in any age or condition, but certain machines I pay premium prices for, such as:

* EARLY CAST IRON SLOT MACHINES OR TRADE STIMULATORS

* 40's and 50's JUKEBOXES

* LARGE WHEEL FLOOR MODEL SLOT MACHINES

Like I said, the machines can be any age however, even the electro-mechanical Bally Slots for example. I also buy parts and parts machines. I travel to pick up machines, or shipping can be arranged anywhere in the US.

Please send me a E Mail with a description for a prompt reply.

Thanks,

Mark Hartman

Folks,

I just picked up a Pro-60 for $200. Anyone have the mods?
Some say cell mods can't be done on this model (I'd like to think there
is at least one sick and deviated individual who has found a way....) ;
)

Thanks.

Caveman

P.S. Any other nifty mods that can be done to this little gem?

yes
> It is essentially the predecessor to the PRO-60 Event Scanner.
don't know
>
>
>Additionally, I have these questions:
>
> What frequencies are locked? What do they include?
It doesn't have 54 to 108 MHz, doesn't have 174 to 406 MHz, doesn't
have 512 to 806 MHz. (These are from the manual, which has some
errors, but it seems right based on what I've seen in use.)
> How many lockouts are allowed?
You can lock out any of the assigned channels, but you can't lock out
frequencies during search mode.
> How many priority memories are there?
One.
> Are the keypad and LCD backlit, or is the LCD the only part?
Just the LCD. Dumb.
> How many search pairs are allowed?
Since I don't know what a search pair is, I'd guess none. If it had
them, I'd know what it was, no?
> Does it have an auto-storage feature?
Not really, but there is a short cut that lets you quickly store

frequencies found from a search into a channel.
> How long does a pair of batteries last?
It uses 4 AA batteries. I've got RS High Capacity Nicads installed,
and I charge them about once a week. The charger is part of the
scanner.
> Is the imaging a problem?
Sometimes.
> Is cellular recieved through imaging?
Yes. It sure is boring stuff. I avoid it.
> Do the keypad test modes work? What do they recieve?
> (http://www.designeq.com/PRO51testmode.html)
Interesting. I'd never tried these before, but I just did. Test modes
0, 1, and 2 work. Test mode 3 (display test) does not. I haven't tried
using these out-of-band frequencies, but I presume they'll work as
advertised.

A Palm Beach County homicide investigator told me that when he was a rookie patrolman he responded to a Sig 4 (auto accident down here).

When he arrived, he radioed dispatch that he didn't need the medics, he needed the medical examiner.

His Sgt. got on the radio and reamed him out for not following procedure ending with "and who made you a doctor, anyway? What makes you so sure that the subject is dead?"

"The funny way the car is sitting on his chest," he radioed back.

F O R S A L E

(add shipping to prices...)

MOTOROLA MTX9000 fm handi-talkie radio,
model H01WCF4DB5AN NX type WCMA.
900mHz range. With charger and info.
Only $499.

COAX CABLE ---- heavy-duty, 1cm diameter, black plastic
covering, with foam dielectric. New, was on wooden spool
until I unwound it to get approximate length of 300+ feet.
No marking on cable; spool label says 1GHz. From cable
TV upgrade, probably 75 ohm. $ 50 shipped.

..... FOR YOUR DRIVING PLEASURE .....
1929 Mercedes SSK kitcar on VW chassis. Just completed, never titled.
Yellow, with brown fenders and running board, tan convertible top, side
curtains, and tonneau cover. Gold trim instruments.

COBRA 18-ULTRA CB ---- 40 channel, pushbutton tuning, with 3
NOAA weather channels. Includes microphone, but no mounting
hardware. $ 35.

LEXMARK/IBM PORTABLE PRINTER 5183 ---- powered by rechargable
battery or AC wall adaptor (included), this printer is only
11.5" x 3.5" x 2", and weighs about 2.5 pounds with battery
in place. Using silent thermal print head, it will print on
either thermal fax paper or on regular paper using the enclosed
thermal transfer ribbons. Very quiet in operation, and because
it runs on a battery, it is completely portable, for use with
laptop computers anywhere. Includes parallel port cable. $89.
.

ANADEX WORD-SCRIBE PRINTER ---- heavy duty dot matrix printer.
Multiple ports, but no literature so only parallel port in use
now. Tractor or friction feed. Fast, good quality; 17-inch
platten. $ 15

------------------ F L A S H L I G H T S ---------------------

4-D cell (2x2 style), krypton bulb. In box, never used.
$5 + shipping.

6-D cell multifunction lantern. Sleek tubular style with
bright incandescent light at end, 6W fluorescent bulb
along bottom, and flashing red and yellow on top. Also

has electronic sonic alarm that can be switched on with
the flashing lights. In box, never used. $12 + shipping

3-C cell Eveready worklight-style. Bright yellow with
hook for hanging, frosted bulb to diffuse light over area.
Unused, but no box. $5 + shipping

Batteries NOT included.....

COCA-COLA caps. Red cloth, white lettering. New.
$8 each + shipping. Only 9 available.

add shipping to all prices, only in US....
if interested, leave e-mail...

>advertised.

I've done some more testing, and here's what I found...

The display test mode can be accessed using the keys 2, 9, and
down-arrow.

Test mode 1 (which fills channels 1-25 with test frequencies) is
slightly different -- channel 23 is set to 857.2125, which is within
the normal range of the scanner, so it can't be used to get to the
cellular phone frequencies.

With the SportCat 150, the battery icon appears after holding the L\O and WX keys and turning the scanner on. If I remember correctly, if the scanner is plugged in it should read 1.72. If you do not have it plugged in it should read 1.66 if it is fully charged. If your scanner reads 1.45 or lower, your battery is running extremly low and needs recharging.

You won't get to deal with AES Clearwater anymore. They closed up shop last Thursday with no notice to anyone. They didn't even notify their employees. Their salesmen arrived to be told the store was closed, and to go home.

I've dealt with AES Clearwater over the last few years and have had no problems, though when they were on Drew Street in Clearwater, they never had enough stock and often had to order from Orlando. In the spring of 96 they moved to a much nicer store along US19 and there were a bit slow stocking the shelves but Rick, N9PMR, came down to be manager this spring and did a great job. He helped at our local field day, and even loaned us equiptment including a TS-950SDX, TS-970 and a IC-756 as well as power supplies and antennas.

I shopped at AES Clearwater because it was local. I work 8 blocks east of the former store location and dropped in often and bought small things, from a new rubber duckies, to magazines. I also did my share of bigger ticket items. I bought a HF Rig in March, a dual band mobile in February and just two weeks ago spent $130 in antenna accessories for my new car.

Now I guess I'll be shopping mail order -- and I won't be going to Orlando.

AES just walked out of the Tampa Bay area, therefore I doubt few Tampa Bay area amateurs will be buying much mail order from AES. I was about to walk in and buy a Yaesu VX-1R or a mobile rig for my car. Their loss.

> would a new antenna help? i am just using the stock rubber ducky. any
> input is appreciated!

Couple of things are involved here. Is the 2030 using an
external(outside)
antenna or the supplied antenna? If using the supplied antenna and it is
a whip, then it will definitely outperform the rubber duck. And of
course an external antenna attached using good grade co-ax will just
blow away the duck.

And I am not personally familiar with the 2030. I assume it is dual-
conversion? Probably with minimal to average front-end filtering?
This will help it to pull in weaker signals but also rendering it
much more susceptible to intermod interference.

The Pro-26 is no slouch. I would definitely rate it as well above
average. It's front-end filtering is probably a tad better than
your 2030 too...by how much I have no idea.

You will definitely benefit by using a better antenna as long as
you don't overload the front-end with very strong local signals.
For some points on handheld antennas you might be interested in
a review I did a few months back. Try my web page below, follow
the Radio Monitoring link and you should see a link to this
review at the top of the page.

Happy reading and good luck!

645. Things I like to see in the next TT upgrade

Newsgroup: rec.radio.scanner
Date: 1997-07-08 00:00:00 UTC
From: randycz@aol.com
Message-ID: <19970708203601.QAA09578@ladder02.news.aol.com>
Source record: 192194

I've had my TT for about two months now and it does exactly as advertised. Uniden is to be commended for putting the fun back in the hobby. Here is what I would like to see in the next model.

1. USE AA BATTERIES (sorry about the shout, but geez) Does anyone know the life expectancy of these nicads? I have my TT on constantly and only change the battery pack when the low battery indicator beeps (usually once a day). Will this battery pack eventually get to the point it will not recharge fully, especially if it was not discharged fully?

2. Have more than 100 group ID lockouts. I use the lock out to find new ID's but in a heavily used system (Houston, Texas) I hit the 100 limit after about 45 minutes.

3. Be able to set a search range for group ID's (would eliminate need for #2 above)

4. Be able to track more than one trunked group at a time. My local law enforcement dispatchers are on separate systems and my wife would divorce me if I bought another scanner. I had a hard enough time justifying number 7 and 8.

Oh well, wish in one hand ...

Randy

646. Trunk Tracking in Portland, OR

Newsgroup: rec.radio.scanner

>at that time it worked fine. ...

The PRO-60 I tested (s/n 000164) drew excessive current from
the battery even while turned off. Here are some my comments to
this effect in Sept. 1995 Monitoring Times:

"...While turned off, our PRO-60 draws slightly more than
2 mA from a 7.2 volt source and almost 3 mA from a 9 volt source.
That's significantly more current than the 0.010 mA
PRO-26, the 0.045 mA BC3000XLT, and the 0.5 mA BC200XLT.

Let's extrapolate the figures to calculate
how much charge would remain in
a 600 mAH (milliampere-hour) NiCd battery pack if it were fully
charged, then left inside our unused PRO-60 for one week.

The battery pack will discharge from two different sources:
the current used by the PRO-60 and
the current attributable to the normal self discharge process.
While powered off for 7 days (or 168 hours),
our PRO-60 will consume 336 mAH or 56% of the pack's charge.
The self discharge rate for a NiCd battery is about 1% per
day at 70 degrees F, so self discharge will rob our unused
battery pack of about 7% of its charge, or 42 mAH during the week.

By the end of the week, we've used about 378 mAH (336 mAH + 42 mAH),
depleting the 600 mAH NiCd battery pack by 63%!
By contrast, the same battery pack left in a PRO-26 for
one week would lose only about 7% of its charge because the PRO-26
consumes only 1.7 mAH per week when powered off..."

I was told this happened in some other PRO-60s which were
returned to Tandy.

You should measure the current drain while your PRO-60 is
powered off. It should be far less than 0.5 mA.

Greetings,

Anyone have any experience with the Seeker 800 Antenna? I'm considering it or the Condor for my BC80XLT.

Thanks

Tom

IF this really is the truth then 2 things need to be made clear;
a. A previous poster said that the 902 mhz band is shared with part 15
devices; quite correct. The most obvious candidate for a 'cellular'
phone signal is a V-link phone...
Or it could be an image or mixing product, depending on the radio's
IF setup.
b. Doesn't Section 603 of the Communications act prohibit telling
anyone about this kind of interception? hmm..

-> If you get a Ham License, you can listen to a scanner in ANY state!
-> Federal Law overides any State Laws!

There is NO Federal law allowing Ham Operators to listen to scanners in violation of local law.

There IS an exemption to local laws for Hams who are using Ham radios that happen to also pick up out-of-band tranmissions.

I don't have this problem, but I would exchange it. The radio obviously

So you and your friend will just "be more careful?" Why don't you get a group of ham operators to back you guys up and sue the agency that did this? Please don't take me as one of those jerks who likes to run around suing people for everything, but what he was doing was NOT illegal, and unless he was doing something else you didn't mention, they were completely wrong to search and seize his property on the basis of some schmuck telling them he was heard on the person's scanner. Especially because he lost his job over the whole ordeal, he aught to take them for damages and attempt to be re-instated at his previous employ.

As long as people keep bending over and taking this kind if treatment up the ass and then run away with their tales between their lets, these agencies will continue to become more and more oppressive without repremand. That's how things got as unjust as they are now, and by allowing them to continue

operating freely in this fashion, it will only get much, much worse. Pretty soon, I'll bet, there'll be laws against being anything other than a "good little consumer" who gets up for work every morning, arrives at home around 6 PM, and is thereon confined to his or her home as it were a prison with nothing else to do but kill their braincells even further in front of the idiot box. <sigh>

I am not calling you a liar, but find this hard to beleive,.. unless an
official from the FCC was with the officers, and you forgot to mention
it. Police Officers are usually stupid when it comes to radio laws, and
especially when it comes to Ham radio.

you really have to go take it and buy it and then
unpack it *(save all the coverings and the box, don't
bend it when you get bent out of shape afterwards) and
put it in a dry place away from termites.

look at the way it's built. look at the connections
to see if they are really connected with supreme craftmanship
expected of all things bought from RS.

then find another store who sells another brand of discone
and compare the two...

if I had bought my first one from Grove instead of RS I would
have seen how badly made the RS one was...plus a part fell off
when putting it up....never thought of buying from RS again for
antennae

bill

Well your friend must have been a bit *dense* to have mentioned to
anyone that he listens to cellular phone conversations, much less
mention it to the person who's conversation he overheard. There is a
pretty good precedent by the (Florida ???) couple that overheard and
taped Newt Gingrich's cell phone conversation(s)

It's a good way to find out if there's any activity on the frequency
of your rc equipment before you fly. Interference can wipe out a
goodly amount of cash and ruin a lot of fun in a hurry.

2Moderator: Sorry if out of conference.

Hello All,

Your help is heavily requested!!!

Our company named "Multi-Communication". We were established at January 1994. Our business - trade. We have a number of branches in different countries. We employ Russian-speaking staff there. We use office alpha-numeric paging system to organise its work. We would like to buy NEC paging receivers (pagers) from you.
We would like to receive the price on NEC-21A, NEC-26B, NEC-20B and, possibly, other 2-language Cyrillic-Latin alpha-numeric pagers. Please, send us by fax delivery terms and conditions on them, too.
We consider to place an order on
1000 NEC-21A (100-200 monthly - depending on prices),
1000 NEC-20B (100-200 monthly - depending on prices),
1000 NEC-26B (100-200 monthly - depending on prices).
System:
Frequencies: 159,825+MHz and 161,950+MHz,
Rate: 1200 baud,
Format: POCSAG.
Please, call us:
007 095 921-4709,
007 095 971-5514,
007 095 971-5328.
Our fax:
007 095 921-7780.

Our email:
m-comm@dol.ru

If you have no possibility to deliver such volumes directly, please give us the list of distributors with contact numbers.

Best regards,

Dmitri Ivanov
Multi-Communication

>If you get a Ham License, you can listen to a scanner in ANY state!
>Federal Law overides any State Laws!

Unfortunately, this is not true. The federal exemption for hams only covers HAM EQUIPMENT which may receive police frequencies due to it's extended receive capabilities. MOST states do exempt licensed hams in their anti-scanner laws, but the federal exemption does NOT cover scanners.

Some states can be real sticklers about this. Kentucky and Indiana especially come to mind.

Isn't your friend also the one who wants a million postcards mailed to him? And is he dying of brain cancer so you need to bounce some email to all your companions?

This is _very_ good alt.urban-legend material unless you can provide some specifics, such as "NAME", "LOCATION", "DATE", etc...

All this accomplishes is bringing the loonies out who will say "Let's take back control of the government", "Are you sure there wasn't a black helicopter involved?", and "Maybe the UN wanted his land to redirect a river!"

Get a grip on reality lord numnum

boy are you full of "star bangled bullsheet"

what about a man who rented a video made in the 30's and
showed a little boy and a little girl getting ready to
take a bath together...they were taking their clothes
off to take a bath...makes sense to me.

It was part of the story and why they were together.

Seems there was this "affronted" asshole who called police
to report children without clothes on being rented out to
people ... the cops came, they confiscated copies and
then got the address from clerk where there was one outstanding
copy. Six officers stormed his house, broke in and arrested
him for Looking at Nude Minors...

This video was made long ago...but because one bastard who does
not have the education necessary to understand that what a
person does in the privacyof their own house as to what they watch is
part of the Constitution: unreasonable search and seizures.

So don't get down on the writer you go after...yes, the
police are not too happy with the bill of rights. And this
is what the police in china do, in Malaysia, in most
so american countries...one complaint and you are arrested.

no due process. The USA is becoming more like the countries
who are trying to be more like us. GET IT!

All of a sudden nudity is a crime. To see a body under a
certain age is a crime. To look is a crime. To listen is a crime. to
listen to words is a crime. scanner-ese.

But then too, the electorate elected these troops of the
Religious right who have Pat Robertson and his ILK to follow.
They don't give a damn about the Constitution. All they care
about is "pleasing their psychologically deficient leader."

Scanners that listen to "wrong" words are a crime.

Magazines or videos or pic's that show nakedness is a crime.

People, go get a copy of Fahrenheit 451 for a more chilling
reality of what this fuckin government is beginning to
force on the populace....

bill conduit
etc.

Hi John,

Yes, it's true! You'll need an older TV set with an
analog type channel selector that can receive channels
79 thru 83. The newer TV sets only go up to channel 69
on the UHF band.

However, you'll hear more than one convestation at
a time, because each channel covers a 6 Mhz spread.

UHF TV Channel frequecies:

72 - 823.750 Cell phones
73 - 829.750 " "
74 - 835.750 " "
75 - 841.750 " "
76 - 847.750 " "

79 - 865.750 Cell sites
80 - 871.750 " "
81 - 877.750 " "
82 - 883.750 " "
83 - 889.750 " "

Bob

Wrong, 902-928 is not cellular, it is a ham band shared with part 15 devices which are secondary. As far as we know he did not disclose the conversation, only the fact that he heard it. Not a crime.

Due to unplanned events at home ... I must sell a very nice Yupiteru MVT-7100.

You get the radio, manual (actually 2 different manuals), plug-in for the house and the belt clip. The full range ... NO Gaps! Full Cell Capabilities.

The radio is in very good condition. Works, sounds, and performs like it is brand new.

Asking as close to $300 as I can get, the one issue here is I want to sell it in person. I am going to attempt to do this without using C.O.D.'s

I live in Baltimore.

Let me know if you are interested.

Bill

I have been experiencing something funny on Usenet Newsgroups.

Some of Burt's articles and my [Masa's] articles have been cancelled.

I suggest you not to cancel the articles without the clear reasons.
You can't cancel the articles just because you don't like someone.

Thank you for your cooperation.

709. Pro-60 battery problems?

Newsgroup: rec.radio.scanner
Date: 1997-07-08 00:00:00 UTC
From: jeffcope@nol.net
Message-ID: <ED03up.6uG@twisto.eng.hou.compaq.com>
Source record: 192280

I bought a Radio Shack Pro-60 a couple weeks ago for a race this past weekend. Here I am sitting at the track, try turning it on, and nothing happens. I had recently put in brand new alkaline batteries and at that time it worked fine. After shaking it around, putting the batteries in and out, it finally turned on. This happened the next day too.

It seems like there's a bad contact somewhere. Has anybody seen this problem with their Pro-60 and/or should I exchange it for another one?

Jeff

>especially when it comes to Ham radio.

I don't find it hard to believe at all. As you said, Police are stupid when it comes to radio laws, and if a cop suspects that it concers a phone tap rather than an accidental radio intercept, he might try to apply the state's phone tapping laws... after all, he hasn't been in a cave for the last year, and certainly has heard of the Newt et al case and "knows" that even listening to a cell phone on a scanner is illegal... It's illegal, and it happened in his juristiction, so he "must" have authority to arrest the dude, right?

Don't forget the times Ham operators have been arrested because a cop saw their ham radio which was capable of receiving out of band signals, and the cop played with it, found that it could receive his own department's dispatch signal... so he bust's the guy for having a "police scanner" in his car.

The problem IS that (many) cops don't know shit about radios or radio law, and if it smells dirty, they might err in favor of busting the guy.

No Jeff, I think you should keep the defective radio. If you exchange it, they might give you one back that has no intermittent problem and works perfectly. :-) WAKE UP! If it is still under warranty you should have replaced it the next day!!!!

Oh yea, my PRO-60 has never done this trick.

Glenn

Are you talking about DCS (Digitally Coded Squelch) ? If so the RA have
an MPT document giving the code formats etc. Can't give you the number
off the top of my head, but suggest you try their web pages.

Cheers - Pete.

Uniden Bearcat BC80XLT Handheld Scanner ***800 Mhz***
It is up for auction at:

http://www2.ebay.com/aw/itemfast.cgi?item=med08930

This is a great handheld 50-Channel Handheld Scanner. It isn't modified in any way, but picks up mirror images of cell phones and cordless phones. I have "listened" to them only once or twice to see if it would! The Scanner is like brand new. I bought it new 4 weeks ago. I'm now hooked. I have purchased a 200-channel Scanner and need to sell this one. The reserve is low enough to still make it a great buy! Buyer will pay a shipping and handling charge of $6.00 for Priority Mail and quick turnaround time. If you have any questions just email me.

It has all the original registration paperwork, AC wall wart, earphone, Frequency Scanner Guide, boxes, belt clip, rubber flexible antenna, and manuals. This unit uses 4 AA Batteries.

There are a couple of scans of the scanner in the address above an below if you want to see what it looks like. The auction closes on the 11th I believe.

Thanks.

Steve

any electronic store will be glad to see your money

any RS store will suffice

or you can try the store in San Carlos at Laural
and Main street...it's a scanner store...it's
on the corner across from the yogurt shop
on the Easterly side of the street....be sure
to bring a compass.

a ham store will have the manuals of the bay area.

you can do searches on the www search sites and
get them..... search for San Jose Frequencies
Scanner Frequencies
and variants thereof.

bill conduit
etc.

I have a pro-60 and it can scan 30-512 MHz however it skips around by certain increments. is there a scanner that dose not skip any frequencies or is this something they all do.

I imagine there could be hefty fines for not ID'ing properly. There are definitely fines for ham operators who don't ID properly. However, I really don't think the FCC enforces ID'ing for police and fire departments, since the FCC has been cut so much and has other issues it's trying to deal with like malicious interference, digital TV, and other stuff. I don't hear the ID for my local police department as often as I used to, however, I do hear the Columbus trunked system ID at least once an hour.

Happy scanning!

With the SportCat 150, the battery icon appears after holding the L\O and WX keys and turning the scanner on. If I remember correctly, if the scanner is plugged in it should read 1.72. If you do not have it plugged in it should read 1.66 if it is fully charged. If your scanner reads 1.45 or lower, your battery is running extremly low and needs recharging.

Then What do the channel banks do, when you are in this mode???

743. 2021 Speed Booster

Newsgroup: rec.radio.scanner
Date: 1997-07-09 00:00:00 UTC
From: dave1@cardina.net
Message-ID: <33c72077.4220709@news.cardina.net>
Source record: 192043

On the old PRO 2021, try these mods:

MOD #1

Speed increase: Completely unsolder R147 (behind the display behind the volume control) and replace it with a 10k resistor. Major speed increase.

MOD #2

Attempt Band Restoration: Clip and remove D44 and D45. On IC8, remove R112 and R113. Replace with 10k resistors accross the following pins:
10k from pin 4 to pin 7
10k from pin 5 to pin 7
10k from pin 11 to pin 13
10k from pin 11 to pin 14

This will re-enable 68 to 88 mhz and at least the display and mixers for 800 mhz...

MOD #3

Baseband Audio: remove the RECORD OUT wiring from the circuit board near the keypad. Connect the ground side to a convienent ground and the center wire to IC2 pin 9.

Michael

Morse Code

> What is it's purpose?

To identify the transmitter per Canadian Laws. Instead of someone
saying thisis station XXXX overy half hour its done automaticly.

> It seems that if someone talks when the tones are on, the tones start
> over when the talking is finished.
>

This is to make sure that it does not interupt any conversation.If your
radio can decode PL tones then your radio, just like the police radio
will not hear the tones and ignore them.

> Is there a way of connecting my Pro-2005 to my computer to get all
> MDT messages?

I'm told you can do it on York Region. I have not heard of anyone
doing it on Metro.

If you don't already know, I have frequency listing for the Ontario
area at
http://www.interlog.com/~ronkatz Enjoy.

Ron Katz.

I have been in contact with the product manager at Tandy about this. One
of his concerns is that if they support this interface, they would have
to provide Computer Technical support to those that buy it. This is a
valid concern as this can get very expensive.

The video in question was The Tin Drum, it is a movie about the Nazi
occupation of Germany.

A judge in Oklahoma declared it obscene in spite of the ACLU. The police did
barge in and confiscated copies of it. I am not a fan of the ACLU but they
were right in the case.

The film won an oscar for best foreign picture around 1980. HBO showed it in
the early 1980's. That is how I saw it.

As far as your comments that you need to go outside of the country to
recognize how great the U.S. is, it is absurd. You should be able to buy a
scanner that gets every frequency that is available here without any
modification. If someone wants to use a mobile phone, they should be aware
that somebody can pick it up. Notice that the government has had a bigger
crackdown on the people that are picking up voice transmissions compared to
the hackers that are cloning the cellular phones. The people that are picking

up voice transmissions aren't costing customers any money.

Don't have the answer Scott but it sure sounds like you're on to something interesting.

You might want to volt/ohm these pins. It would give some indication if they are active.

Well, I called Yeasu and they referred me to a company called RT Systems (205-880-3093). I called them up last week and they quoted a price of $8.00 or so (+SH) for jack plus tinned pigtail. Mine are still "in the mail" so I can't tell you much else. Not the cheapest, but I could not find it in any of my standard electronic part sources. By the time you get past minimum orders etc, it is not likely that I would have saved more than a few more bucks in the best case, anyway.

Source record: 192105

bipster@hotmail.com (Xander) wrote:
>What exactly is squelch?

The simplest way to think of it is this: the squelch sets the weakest signal the radio will play out the speaker. If a signal is weaker than the squelch setting, it is "squelched" (check a dictionary for meaning). If the signal is stronger than the squelch setting, the radio plays it for you. (This is true in any radio, such as a CB or HAM set.) In a scanner, the squelch plays an additional role because it determines when the radio will resume scanning.

If your new radio won't receive the weather transmission with the squelch turned up, as your old one did, perhaps there is a problem with the antenna or coax cable.

There are probably legitimate uses for such a device <what they are,
is anybodys guess>

Try http://www.steaksandwich.com

MiKeY

P.S. I do not send ANY sensitive info over a wireless device. If you
transmit it you deserve to have it intercepted as far as I'm concerned.

Bob,
First I'll start off by asking why you don't simply take the 350A with
you? Depending on how you have it wired for power, you can always buy
a DC to AC convertor to use it in the car or buy a power supply to
convert AC to DC. The BC350A probably came with a wall wart adapter
though didn't it?
As for other scanners with service search, Uniden makes a number of
them as well as making several units for Radio Shack(which usually
omit the police freqs).
Uniden makes the 700A, BCT-7, BCT-10, BCT-12, BC220XLT, BC230XLT,
BC235XLT and BC760XLT. Radio Shack carries the PRO-51, PRO-67 and
PRO-2046. Prices will range from $150 or so up to around $275.
Good luck!

Strong signals,

Barry, YOU are in Region 3, and there is indeed, no 902-928 MHZ band
in that region... nor is there in Region 1. There is however a 902-928
MHZ ham band in Region 2, which covers North and South America, and
Greenland.

Even if he had been a genius arguing the point at the time of
confiscation would not have helped him. The courts were established for
argument of procedure not the street. Yes, it is a shame that the police
in whatever city this happened should have known better, but they were
doing what they thought was legally correct. The courts will show them
the error of their ways.

Now of course I'm sure that someone has by now sent our poor friend the phone number of a good (sic) attorney, who will not only fight to restore our poor unfortunate friends property, but will also fight to relieve the local taxpayers of about a gizillon dollars because of the actions of the big bad police. This will of course substantially reduce the good attorneys chances of ending up below the poverty line this year.

And I usually see at least one bozo who doesn't know how to use
his capslock key.

>COME ON NOW THIS IS A CROCK AND WE ALL KNOW IT.

IMO, We don't know ANYTHING. As much as we don't KNOW if it's
true, we also don't KNOW if it is false. While it would be
nice if the original poster included more information to
support his claim, the lack of it alone, should not be enough
to prove it didn't happen.

I am having some trouble with my AR3000A. I was going to control it
with my PC.
What I did was connect it with RS232c 9 pin cable with 25 pin adapters
on each end. Hooked it to Com Port 2 and to the scanner and now it
won't even turn on.
It worked fine until I tried this.
Any ideas?

Thanks, Tad Newton

I don't have a TT yet, but a couple of my friends do and one of them has said the same thing about the battery pack. Actually, when I saw his TT, I was really suprised about how unique the battery pack was. I was figuring on a battery pack similar to the ones on most ham HT's. But a triangular shaped NiCad with a wire connector on it? At least the TT came with two batteries.

I am anxiously waiting for the base version of the TT, the BC895XLT, to come out; that's why I haven't bought a handheld version yet. I have the BC890XLT and really love that scanner. Supposedly the 895 will have PC programming capability, plus CTCSS decode, a must for scanning in intermod-prone areas like Columbus, Ohio. I would really like it to have alphanumeric ID capability like the BC9000XLT, but I don't know how likely that will be.

My 2 cents. Happy Scanning and Trunktracking!

First off, you only have to listen to the output frequencies. Second, if you get anywhere near to the frequency on f.m. you will hear it, so don't worry about "splintered" frequencies. Third, if it is a Motorola system, get a Trunk tracker (BC-235). Sounds like your friend is spouting the same Motorola propaganda that they tell the people that are looking at buying a trunk system ("Don't worry, People with scanners can't possibly hear what you are transmitting because....")
Do a little studying, and get with someone that has some scanning experience if possible. Good luck.

Source record: 192153

A formula that will get you in the ball park, so to speak, is the formula for 1/4 wave, 234 divide by the frequency will give you the length in feet. For 1/4 wave to work, you must have a ground plane, i.e. one or more 1/4 wave elements attached to the ground end of the feedline. I suspect that your discone would serve as an adequate ground plane. This formula is mostly geared for the construction of 1/2 wave wire dipoles for H.F. (468 divided by frequency to get 1/2 wave), but it should be more than adequate for a receiving antenna.

Good Luck and 73.

MARS is not a call sign. It stands for Military Affiliated Radio Service. It consists of mostly amateur radio operators that pass messages and conduct phone patches for service members. I do not remember what the address is, but they have many websites. You could do a search and probably come up with a few if you are interested. I was Chief Operator of a Shipboard MARS station for many years and it was a real kick to be able to communicate with my family from "out at sea" on a deployment.

Bill my friend, you could not be anymore ignorant if you tried. People like you and all the government haters out there just make me want to puke.

Try this one for size. If you don't like what is going on, get your stupid ass registered to vote and get involved in the political system. Find others like your self and form a new party. But don't sit in front of your computer and bitch about MY FUCKING AMERICA. Ok asshole.

By the way have you ever been to China, Hong Kong, or any other country? I bet not. I have and I LOVE THIS COUNTRY you fuck. Take your stupid shit somewhere else, you moronic fool.

Ok , I feel much better now......

By the way I don't believe a word about the story that prompted this discussion. Not one word.

On Tue, 08 Jul 1997 14:21:13 -0500,
in the newsgroup rec.radio.scanner,
Jeff Johnson <*remove*jbjsabu@qni.com>
from Suba Communications, http://www.suba.com thoughtfully posted:

> There is a Uniden Bearcat BC860XLT for sale at a local pawnshop
> for $50. It has no user manual, and there is no button on the panel
> which says "Program" or "Enter" or anything which would let me
> try to program it to see if it even works. Can someone give me a
> hint as to how to program this unit, and is this a decent price?
> Thanks!

The "E" key in the lower-right corner of the numeric keypad is the "Enter"
key. The "E" key enters the frequency in the currently displayed channel.

It is in "program" mode whenever it is *not* scanning.

For a quick test, hit the "WEATHER" button, and it will scan the WX
channels.

HOW TU ENTER:

Press <Manual> to stop scanning.

Use "MANUAL" to step to the desired channel, or go directly to a channel by
pressing <#> <#> <Manual>. ie: To go directly to channel 12, type:

<1> <2> <MANUAL>

To enter 162.55MHz in the currently displayed channel, press:

<1> <6> <2> <.> <5> <5> <E>

If you goof, press the decimal key "." twice to cancel entry.

To search a range, 162.4MHz to 162.55 MHZ for example, press:

<Manual>
<1> <6> <2> <.> <4> <LIMIT>
<1> <6> <2> <.> <5> <5> <LIMIT>
<SEARCH>

Press <Search> to continue scanning.

Press <MANUAL> or <SCAN> to exit the search mode.

Nice Feature: If you run across a unwanted signal during a search, press
<LOCKOUT>, and it will then skip that single frequency. You can reject up
to 10 frequencies while doing a search.

While scanning, the 0-9 keys toggle the 10 banks on-and-off. (10 banks of 10 channels each - indicated by the little numbers above the frequency display).

Comments: This is a typical dual conversion receiver (10.8MHz/450KHz), and is subject to the usual intermod problems. 900MHz is loaded with images, but sensitivity is good. VHF/UHF sensitivity is also fine. Fast scan speed. Good squelch action. No mods as far as I know, but images are abundant. Good frequency coverage 29-54, 108-137 AM Air, 137-174 Hi, 406-512 UHF, 806-956 minus cell.

If the adapter is missing, any 9VAC or 12VDC, 300mA adapter will do. The supplied one is 10VAC at 300mA.

I got brand one new at liquidation sale for $120 last year. It comes with a wall-wart supply, cheezy push-on whip antenna, manual, and a bunch of "junk" pamphlets.

For 50 bucks, go for it.

Good Luck!

Cheers,

Why would you want to do that? I can only imagine it would be for criminal gain such as bank account numbers, credit card numbers, long distance access codes, voice-mail access codes, etc.

Don't think you'd appreciate your nabor jotting down your account numbers....grow up and quit minding your neighbor's business. Besides Mac, ITS ILLEGAL. And even talking about commiting a crime is called CONSPIRACY. No Joke Mac. And to top it off, you're broadcasting your criminal intent in the open for everyone including uncle sam to see.

Pretty dumb Mac.

Since a Ham radio can be homemade, a scanner can be considered a Ham
Radio, especially if you are using it to recieve on the 440 band while
you transmit on 2-meters. It is part of my Ham radio system and IS
covered under the federal law. ALL the major HAM magazines have
allready covered this issue several years ago.

I'm an occasional scanner listener and own a Bearcat 350A. While I know that this is probably not a scanner for the high-end enthusiast, I like the fact that it has pre-programmed freqs for police, fire/emergency, air, marine and weather.

My question is, are there handheld scanners out there with this similar feature and if so, would I have to get a "high-end" unit?

It would be great to take on vacation where I'm just casually listening.

Any recommendations via e-mail would be appreciated.

Thanks,

Bob Shannon

A local ham who happend to be mentally handicapped (low IQ) had his
antennas all of them taken by city police. Now we all know this is not
supposed to happen? But being unable to argue or defend his rights it
did happen! Goes to show you that you only have the rights that you
know you have and are willing to fight for!

Jim,
I put a review of the Pro-64 on my web site a few months back. If interested, click on web site below, follow link to Radio Monitoring and near the top of the page you'll find a link to the review.
Glad to hear you got the data interface working seeing as how Radio Shack doesn't seem to anxious to get one out there of its own. Kudos to Ben and Radio Manager!
Good luck and happy monitoring!

Friend1 hears Friend2 on radio.
Friend1 tells Friend2 he heard him on the radio.

> Your friend was hearing cellular phone traffic by hearing the image
>frequencies in his receiver. Nothing he could get convicted on here, but
>since he did go and blab about this, he could be convicted of certain federal
>law violations

Ignoring for a second that it was a cell call...

I do believe that one may mention an intercepted conversation to a person
who was a party to the overheard call.

> New to scanning and would like to know what hand held to buy

Careful what you ask for. I'd recommend a scanner which is
probably outside your price range...which you didn't mention
by the way. There are nearly 60 models to choose from these
days. If you are considering used, that will add another
100 or so. Prices can range from $50 for the used up to
$2000 for a new base model.
For a little self-education, try my web page below. Follow
the link for Radio Monitoring and look under the section titled
Getting Started. Once you do this, you'll be able to tell us
what price range you are looking for, whether you want a base,
mobile or handheld model, and what features and frequency
ranges you would like to have. That will help narrow it down
to 5 or so choices.
Good luck!

Source record: 192177

Yes, I bought them both. I use the seeker and don't use the condor.
I've found the seeker to be quite good - Even though it is somewhat
directional for
the 800 band, I've still been able to pick up wwv5 at 5mhz, tv signals
quite well, and
450mhz police traffic from 30 miles away.

I use an aor ar8000, so your mileage may differ... I'm actually considering
sending my
condor back to trade for another seeker...

The only issue you might have is that the base of it is fairly thick, and
it will not fit
some scanners that have a recessed BNC connector, for example

THE RADIO-S**** Pro-25!!!!! but putting this antenna on a cheap scanner
won't
keep it from being a cheap scanner....

Source record: 192180

Does anyone have access to the true pinouts of the CPU in the PRO-60

I have the service manual from Radio Shack and it lists the pins, but there are 4 (I think, I do not have the manual with me at the moment) pins that are not connected and the manual just lists them as not used. 2 of them are adjacent to the memory control pins for the 2 existing memory chips. Are these possibly pins to control more memory? There are othe pins that are not labeled.

Any help would be appreciated.

Scott

>our government is getting... I hate our government TOO! So HA HA!
>You assumed I was a patriotic government lover and I wasn't!! Joke is
>on YOU!!

lord numnumb.....

the freedom to listen is correlated to the freedom to know
the freedom to know is correlated to the freedom to hear
and see what you choose to .... the analogy is that when you
a are not allowed to listen and go to jail you are also found
a criminal for seeing what it is you are listening to....

the kids analogy was to point up that the listening to words
is similar to seeing what is seen...if you choose to see what
is unseeable and you choose to hear what is not authorized in
the manner conducive to more...then the both equal your death
as a free man.

The other side of the coin. You cannot have freedom if you
cannot read or look or learn from things seeable as you cannot
have freedom if yhou cannot hear what is there to hear...

your thumping on your public member about government was never
really attacked. You just assumed it that way.

don't call me your friend, asshole.
You do live in a vacuum...don't you. you are a legend
in your own mind.

>Bill my friend, you could not be anymore ignorant if you tried.
People
>like you and all the government haters out there just make me want to
>puke.

I am sorry you don't have much of a grip on reality.
Actually, I'm not. It shows others that you enjoy putting
your head in the sand and pretending a lot of things are
happening based on how you want it to be done .... while
with your head in the sand.

Govt haters. ME. Govt haters are the people who get voted
into office who are the troops from the Pat Robertson
anti-intellectualism militia who are out to rewrite the laws of the
land from their viewpoint one law at a time...based on his and
other redundancies as Falwell, and Schuller and Jimmy and Swaggart
and more... they have an agenda...to make the USA the way they
want it to be.

People who are in office taking away our freedom to look, to
see, to speak, to hear and to be educated are the government haters.
Once they get these agendas in line then they begin to control what
goes on in the avenue of ideas, thoughts and acts.

it's oversimplified...but notice how our basic rights are going
by the wayside. Notice how the media don't put up a fight.
Notice how newspapers and tv stations owned by huge conglomerates are
not fighting thet wrongs of what the government is doing.

No one is riding their horse saying "the freedom-denyers"
are coming.

Your Fucking America...who made it YOURS? YOu live in a collective of people who agree that you are not seen. That is what govt is about. they care a piss-off about you. all they want is for their agendas to be heard and passed on and then maybe they will get around to you when you call them an asshole and they put you in their jail for "corrupting their reality-base"...

there is a law: doing an act or saying a phrase that corrupts a minor. Think about this. Corrupting a minor. How to you corrupt what does not exist? Have you ever heard of Socrates.? Tell us what you learned from him. About corruption.

YOu love this country...give me reason of give me a plane to Hawaii.

...my country right or wrong, huh ? this is your motto right...

here's a reality-check for you: to educate kids about the body they inhabit and how it functions sexually is now a sin. to show them pic's or slides or videos about how they are built or work is a sin. to give kids anything related to bodily activity when naked is a sin. That could be a pic of a child taking a bath or taking a pee or cleaning him or herself.

Because it's kids...for some reason now all America is a sinner and therefore a Criminal Against children if they happen to educate kids about their bodies. to hug a child is a crime now in schools or anywhere where kids go to hang with adults.

A teacher hugged his class-kids too much and he's in jail for misappropriately touching the kids. I guess he patted one or two on the butt and that was a crime. In front of other kids he is alleged to have committed crimes against the morals of kids.

To view is a crime. To listen is a crime. To tell another is a crime.

All endorsed by our pres the guy from Georgia. He still has not taken restrictions off that decency act he signed that forbid teaching abortion in public schools. To teach about abortion is a crime.

Now...who had the upper hand in that ? those with an agenda who are on the band of the pat Robertson sickness train. The rest follow.

Religion. A Free Society being held ranson by beliefs of others who want it that way...no matter who goes to jail for being able to not agree. Religion is dictating now what laws get passed for the agenda they have.

And you call me anti-american.

>
I have and I LOVE THIS COUNTRY you fuck. Take
>your stupid shit somewhere else, you moronic fool.
>
>Ok , I feel much better now......
>
>By the way I don't believe a word about the story that prompted this
>discussion. Not one word.
>
>
Is this not the summation of your grasp on life. you don't
believe what happened in Utah to this man I mentioned. You won't
read the newspaper to find out. You don't believe what I said
is true. What does a belief have to do with reality?

People who believe are the fodder of the religionist-right
who wants to use your stupidity to get them in power. You don't
believe either then that 30 million jews were killed in Germany
and Austria and Poland. You don't believe that many millions
in Cambodia were killed by POi Pot.

People...NOT ONE WORD will this moronic fool accept.

he does not believe. He's still got his head in the sand
believing as he does that what is going on goes on because
he makes it a belief that everyone follow his example.

Fellah: you have shown that what you are about is a mirage.
You have no claim to being who you want to be seen as. You
are not. And being "your country"...well, based on what
you just spouted off, I don't think the country you live in
even knows you exist.

Your AMERICA...wow. Joe McCarthy once thought America was
his and ruined the lives of thousands of people because they
did not see America as he ordered it to be seen as. You and
JOE make good fucking-partners.

You refuse to see. And you call me anti-american.

You refuse to think. And you call me an idiotic moron.

You refuse to breathe. And you keep your head beneath the sand

What comic book do you hold up as your bible? Your way of
living. Your being so stupid that you think the government gives a
shit about you.

People who have to use the AMERICA as a "crutch" have really
nothing to offer the whole body politic.

Timothy Leary was a great AMERICAN. He thought.
Pat Robertson is not a great american. HE destroys.

you figure this one out....

have you ever met JOHN GALT?

I'd also like to find a source for a 4 terminal plug like the one on the FT-50. I did find out that Yaesu's microphone adapter, I think it's a CT-30 brings out all 4 of the terminals to standard jacks. The earphone/speaker is a 1/8 inch monaural jack and the mic jack is a 3/32 stereo. The ring terminal of the mic jack is the data connection used for cloning. Tips of each plug are speaker and mic, sleeves are ground. Unfortunatly, the 3/32 stereo plug is as hard to find as the 4 terminal Yaesu plug. However, Radio Shack sells a stereo adapter that converts from 3/32 to 1/8. I forget the part number. Actually all these measurements are probably metric but it's too early in the AM to do the conversion in my head.

Spoke with rep from Santa Fe Distributing of Lenexa, KS, where I have a few TT's ordered. Should be getting my TT's in a few weeks - also inquired if new units being shipped will have "new and improved" antennas that don't have their center pin break off. Rep said "that may be the reason why Uniden is holding back on our orders." A "better" antenna is allegedly being packed with newer production runs. I'll see it when my units arrive, and report to the group.

I want $275 or best offer. Preferrably in the Washington DC area. This thing goes for $320-$340 new.

This is the very small dual band/wide band ht. It can be configured to scan 6 banks of 10 channels each. For a total of 60 programmable freqs to scan.

It also transmits on 1/3 of a watt. Weak yes...but you can't beat it for the size.

A very good deal....but I need the cash.

I have a Z30 that goes into freq. err when in the scan mode.
If I leave it run in manual it plays fine. But every time I
run it in scan mode it locks up on freq. err. I checked and double checked
the freq. list,it is all within band. Any help would be greatly
appreciated. Thanks Ed

Source record: 192221

It's not designed that way. But what the heck. My AM walkman won't get color TV, either. The PRO-51 *will* pick up some 81 MHz TV audio and direct frequency cellular. You have to turn off the scanner, then use the memory clearing key combination of 2, 9, and lockout as you turn it back on. You'll lose all your programmed frequencies! However, some of the channels will have "out of band" frequencies. You can then do "direct" and arrow, going up or down from those frequencies, putting them in the channels. For instance, I have two VHF TV station audio put in channels 199 and 200. One of them is channel 5 at 81.76 MHz. The other one is some other station. The frequency is 81.34. Obviously a spur/image/whatever. You will find a couple of cellular frequencies, but once you scan/search outside the cellular range, you won't be able to get back in without choosing the above-obtained cellular channel. Most frequencies are unobtainable, though, so the 200-400 MHz band is probably out of the question.

851. Re: Does anyone know what this beeping is? (wav file attached) - beeping.wav (1/1)

Newsgroup: rec.radio.scanner

Your story reminds me of so many fish stories. If he, or the fish, would have kept his mouth shut, he would be much happier now. Who was he trying to impress with his illegal activity?

Message-ID: <5puok4$26sq@newssvr01-int.news.prodigy.com>
Source record: 192226

just to clarify the minnesota scanner law. you CAN have a scanner in a vehicle if you are a bona fide law enforcement official (obviously), a member of the news media (you need a permit), or a HAM. i belong to two of those groups, but i still carry a copy of the statute in my glove compartment.

and why do they call it a glove compartment?

dejim in duluth. i'm closer to the arctic circle than you are.

856. WTB: OPTO CUB frequency counter

Newsgroup: rec.radio.scanner

Yea, I'm looking for one. If anybody wants to get rid of one, let me know. I'd really like to have the manual with it if at all possible. I want to know the frequency of the people on the phone in the car beside me so I can tune in to them faster. No, I don't want the counter/scanner combo unit that automatically tunes the scanner for you. I don't have that much money to spare. Thanks...

Peoples,
The PRO-51 couldn't,shouldn't,wouldn,t..... recieve the 200mhz portion
of the spectrum.....Just can't do it.
This scanner dosen't even have the right circuitry to accomplish it.
If you want I can send you a keyboard modification ot recieve cellular and
54-88mhz only if your ser # doesn't start with 4500 or your date code is
lower
than 7A4

Your friend was hearing cellular phone traffic by hearing the image
frequencies in his receiver. Nothing he could get convicted on here, but
since he did go and blab about this, he could be convicted of certain federal
law violations .... remember the Newt Gingrich cellphone intercept and the
Florida couple?

Don't know what the local law can do in court, other than make his life
miserble for awhile.

Ed

Actually the one you may like is the new "TrunkTracker" from Uniden.
The BCT-235XLT. In addition to its primary use as a Trunk Tracking
Scanner, it has service bands as well. It has Weather, Police, Marine,
Fire/Emergency, and Air. It is a 300 channel scanner, and goes for
about $269.

Hope this helps!

There are legitimate uses, especially if you're a ham. You might want to monitor what tones somebody is transmitting as a diagnostic proceedure, or to catch repeater abusers, or monitor people who have access codes and shouldn't. If you have a private (say GMRS) channel for which you are licensed, these applications are also legitimate uses.

Michael, thanks for posting these mods

On Mod 3 I'm missing something. What would baseband audio be compared to what would normally come from a 'Record Out' function

Wish I knew some trick for changing the Freq step of this unit. Would make it a better candidate for the 800Mhz converter I built.

This is not quite what you asked but it's in the 'of interest' ballpark

I've been using a full size 50Mhz J-pole for this band. With it's low
radiation angle it works great

One of my relatives, is a Luitenant (SP?) for the Tampa Police Dept. It is illegal in Tampa, along with Florida to possess a scanner in a mobile vechicle. It really means jack didly if you have a ham liscense. Along with the city I live in Overland Park it is illegal to have a scanner in your car but the city next door could care less if you have a scanner in the car.

I was flipping through the scanner FAQ and noticed a section on antennas. It says that outdoor scanner antennas can extend reliable reception to 100 miles or more. Is this true? Is there actually a scanner antenna that can pick up things 100 miles away? And if so, what is the model number/brand name, and about how much does it cost? Thanks a lot for reading.

It could be true if you have a 250' tower in your back yard too.......

Seriously....I think 100 miles may be the absolute maximum under prime
conditions. Height and short cable runs are 2 major factors in getting good
distance. Of course, a good quality scanner helps ;)

>CONSPIRACY. No Joke Mac. And to top it off, you're broadcasting your
>criminal intent in the open for everyone including uncle sam to see.
>
>Pretty dumb Mac.
>
>
I believe the man simply asked a question. Who the hell are you to
ASSUME criminal intent? Do you know this for sure? Is there no LEGAL
reason for wanting to own such a piece of hardware or software. If you
have no positive response to the stated question then keep your drivel
to yourself along with your self-righteous attitude! Pull your head
out of your ass and READ and LISTEN quitely and maybe, just maybe you
will learn something.....

Now, go back and hide in your fuckin' hole goof, this is for Scan2000,

Steaksandwich software has EXACTLY what you are looking for! They sell
a program called Wintone (currently in version 2.0) and it decodes
DTMF as well as a slew of others including, but not limited to CCIR,
EEA, EIA, NATEL, ZVEI, ZVEI1, ZVEI2, ZVEI3 . It can be used for CTCSS
and PL tone decoding as well. The software is cheap and comes with
"plug and play" .dll's for optimizing your processor. The best part of
all is the price. I am a registered user of the software and it cost
me fifteen bucks (I think it's twenty now). I believe their website is
located at http://www.steaksandwich.com I think the software has a 30
day or 30 use trial version so you can experiment with it first. Then
decide if it's what you want.
I am in no way affiliated with the company and must state that this is
MY opinion as a registered user of this software. Just drop a note
here to let me know if you tried it and what you thought of it.
Maybe "your.neighbor" thankfully -- NOT MINE-- (with messages
references from cop-talk AND aol -- should we be shocked?!?) should
visit the website and enlighten the authour of this software as to how
illegal it is <g> ;->
Rgds.

Mad Dog!!

I apologize to all the usual visitors of this group for the above but
the response by "your.neighbor" spawns useless threads and is
accusatory, for lack of a better word.

Radio Shack is having a sale on six of their
scanners thru July 26th :

PRO-67 $200 save $ 80
PRO-29 $130 save $ 90
PRO-28 $ 90 save $ 50
PRO-2014 $100 save $ 40
PRO-2045 $250 save $100
PRO-2037 $200 save $100

The PRO-67 is their latest triple conversion handheld. The
PRO-2045 is their next-to-latest base model which I consider
to be an exceptional value at $250.

I have no affiliation with Radio Shack or Tandy Corporation.

Strong signals,

Hello friends,

I know that the AR-8000 has been banned for sale in the U.S., but is it still possible to get it for export (such as by a tourist coming for a visit)? I'd prefer to buy a new unit with warranty, pay with a credit card and have it shipped to a hotel in New York city (a friend of mine will be visiting New York next week).
Thank's in advance for any help offered.

Please email me directly in addition to posting here, so no responses are missed. Don't forget to remove the "55" from my email address inserted as an anti-spam counter measure...:-)

> > Transmission Frequencies: ..... 144 MHz, 220 MHz, 440 MHz, 1296 MHz
> > Gain: ..... negligible (-1.5 dB to 0 dB)

Notice the ain factor in the specs. It says negligible. Meaning all the antenna is is a higher metel rod that sticks out of your scanner. With that -1.5 dB, that means you're losing signal. You DO NOT want to lose signal strength in scanning! That's the only con about it. There are a lot of pros though. One thing is for certain, it will recieve every frequency any standard scanner can recieve. You can also transmit on the ham bands if you're a ham. And yes, the physical aspects are good about it too. I have a 5 year old RS scanner antenna (not a discone) about 50 feet in the air. I take it down once every season and twice in the winter to clean it. WD-40 on each radial works just fine and tighten anything loose. Static electricity will build up on the antenna and any smoke in the air will be attracted to it. Then your signal loss will be a lot! Just a paper towel and WD-40 should do. Good luck and happy scanning!

906. Re: Scanner Antenna With 100 Mile Range

Newsgroup: rec.radio.scanner
Date: 1997-07-10 00:00:00 UTC
From: Richard LeBreton <lebreton@cyberbeach.net>
Message-ID: <01bc8d6c$0ac68ce0$8729eccf@lebreton.cyberbeach.net>
Source record: 192019

The range of the antenna depends on the frequency, atmospheric conditions, and how high the antenna is. I suppose the biggest determination is the frequency.

If you are listening on the HF band (3 - 30MHz) then you can listen to broadcasts from thousands of mile away. Even with the CB radio (~ 26MHz) I could hear signals all the way from Corpus Cristi, Texas on a good day. I live in Northern Ontario, by the way.

However, if you are listening to VHF or UHF the signals follow a line-of-site path and do not curve or bounce as much as lower energy frequencies. If you are on a flat plane I believe that the line-of-site to the horizon is 15 miles (I think!!). At any rate it isn't *that* far. To get 100 miles you have to be on a moutain.

To answer your question I think it is unlikely.

First time I put batteries in a new Pro-60 it wouldn't turn on; I removed
and reseated the battpak and then it worked.

Source record: 192021

I would say it depends quite a bit on the location and power of the transmitting site also. I live in the northern most part of Tacoma Washington and can hear a number of stations in Oregon and British Columbia which are both over 100 miles away. I have also worked a station in Astoria, Oregon a number of times on 2 meter simplex. Astoria is a good 130 miles as a crow flies. Antenna used are a 5 element quad on the chimney of my one story house and a Cushcraft dual band antenna up a tree about 45 feet. Yes, height does play an important role but geographics is also a giant factor in this can of worms. No, I am not on a mountain top. I would guess I am about 200 feet above sea level at the most.

Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.amateur.misc

I have one very nice condition Realistic HTX-202 2mtr transciever with box & manual to trade. I am looking for several different scanners presently. If anyone has one on the following list and would like to discuss a swap for my HTX-202, let me know. Here are some of the ones I am looking for at present: Regency MX-7000
Uniden BC-760
Uniden BC-2500
Realistic Pro-2026
Realistic Pro39
Realistic Pro-43
Realistic Pro-46
In the above listing, I need full coverage 800mhz with no gaps. I am only interested in swapping within the United States. Any interested parties, please e-mail me with details on your unit. Thanks for reading my post.
Regards,
Ray Miller N2NJK radioman@localnet.com

For general purpose use, most folks use a Discone. The single biggest
factor in reception range is antenna altitude, especially as related
to nearby hills, etc.

I have a discone at about 40' off the ground, actually live in a low
area relative to terrain within 2 miles, but can recieve 160-200 miles
in some directions (clearly) if I want to.

Mark

The list of CB Shops is finally available for your shopping &
repair needs
all over the nation.
CB Shops listed from East to West and North to South are available
and
ready to address your needs. Some carry hard to find equipment, and

some carry wholesale parts & equipment.
Whether it's a brand new radio or an old tube type amplifier, your
chances
of finding what you need are much greater and faster with this
brochure.
Use this brochure to shop & compare to enable you to buy at the
best
prices, or to compare what ever prices on labor, etc.
Will save you time and hassles of trying to search the information
by
other means and in the end will more than likely save you some
green$$$$$.
This brochure is LOADED WITH OVER 60 names, addresses,
and telephone # 's of
different shops, shacks, and even, shops on wheels.

This brochure will pay for itself with the time it will save you
in searching
for that one shop that can accommodate your specific needs.
You won't want to miss out on the next great deal !!
Here's how to get your copy of this, fast selling ,
brochure..........

Send $2.00 cash, .32cent stamp , and of course, your snail mail
address
to.......
(please include your e-mail address)

>allready covered this issue several years ago.
>
>

I guess my question here is, if you're operating your rig legally, and not using it to butt in on the scene of a police or rescue unit, why are the police officers even bothering with pulling you over?
I have run a scanner for years in my vehicles. I had one confiscated 15 years ago or so, because I was being an idiot, and butting in where I wasn't welcomed. I knew the rules, and I got caught. I did get the scanner back, after I went to court. Seems the judge agreed with me a little, that being a handheld scanner, how else was I supposed to get it from point A to point B. The case was dismissed, (no aquittal, just dismissed)...and I received my scanner back.
Since then, I've realized how to listen, without being seen. Why is it all these hams are being stopped??
Could it be they're not as innocent as they claim?

I think it's possible.

the reason all mod sites are blank is because the pro-2032 is pre-law. it was sold with full 800mhz coverage. to test your scanner hit manual then enter 870.000, then press the down button, you should get alot of conversations.

The comments about going outside of the country were my personal experiences. I did not mean to say the you have to leave the country to appreciate it. It does sharpen your feelings. My main problem is all this "the government" is trying to take away all my rights crap. It's not the government, it the people that we as a nation keep electing. And all the "special interest groups" that buy them on the way to office. The media who make it so hard to listen to a news cast with out getting mad about all the opinions that the insert into the stories. Give me just the Facts!!!

But the biggest factor is the do nothing, lazy, un-america, losers who don't vote. They are the MAJORITY. Doesn't that make you sick. I can't tell you how many times I have been in a heated discussion with someone about politics or the state of our country, only to find out that they didn't vote. If you don't vote, don't bitch about what you get. Period. And if you do vote and you don't like what the government is doing, do something about it. I have in the past 3-4 years written about 100 times to the president (didn't vote for him), my state representative, and just about every leader on down to my city council. If there is something going on that I don't like, I take it on. I don't sit around and bitch about "the government" implying that there is some "big plot" going on.

Tom

Hey, just thought i'd share with everyone,
I found a site with loads of nude CHEERLEADERs. The
address is:

http://www.mid-night.com/

--Jason--

(Sorry for the intrusion, everyone needs some short skirts in their life)

P.S. They also a have spanish / latina women archive

Source record: 192058

For those scannists who are interested in monitoring the cordless frequencies, try a Radio Shack multi-element dipole (catalog #20-181). I have this antenna mounted at approximately 30 feet above ground level, and in many instances I can pick up cordless calls in both the 43 and 46 MHz bands more clearly than I can with my Rad Shack scanner antenna (the 6 footer with 6 elements) hooked to a preamp. With the 6 foot high antenna (mounted about 25 feet above ground) I can pick up cordless calls from 1.5 to 2 miles away if the freqs. aren't too congested with traffic. The great thing about the dipole is that it also receives the shortwave bands, a plus if you are also an SWL. Don't bother with Rad Shack's discone if you want to pick up cordless calls; the lack of a vertical top element will prevent the antenna from picking up cordless calls except those very close (1/4 mile or less) to your QTH. Rad Shack's cheapest scanner antenna (catalog #20-176) will do a better job of receiving the 43 and 46 MHz frequencies than the discone will because of its vertical element.

Stories like this always make me suspicious. Who was the ham? What
was the reason the antennas were taken down? Did the ham make any
threats to police/neighbors? I just can't picture police officers
climbing on a roof or up trees to do this. You need to provide more
details if you want to be taken seriously.

>AMEN !!!

Hi Hank and Glen - You both misunderstand the situation. With well over
20 kilogroups on Usenet, any topic you can possibly cook up would be on-topic
somewhere. Antenna discussions are discouraged on .misc becaue there is
a NG (r.r.a.antenna) devoted to them; home-building discussions are dis-
couraged on .misc because there is a NG devoted to them. When we ask
folks to move off .misc it is not because we're tryng to silence or censor
them; rather, we're asking them to move to a more appropriate NG. If they
don't comply then it's appropriate to gently request their provider to
ask the user to abide by the charter.

If all 200,000+ of us decided to ignore the charter and post off-topic
remarks, this NG would be unreadable. Is that type of anarchy what you
truly desire? Would you quietly sit by and kill-file 200,000+ posters?

(One's lack of disipline on a NG can tell us quite a bit about that person.)

ZUT,
Jeff KH2PZ / KH6

Mike, Motron out of Eugene,Oregon sell several models of decoders. All work well.
The cheapest is you pager. Record the tones on a tape recorder, call you pager and play the tones into the phone. Read them on your pager when it goes off.

There are probably legitimate uses for such a device <what they are, is anybodys guess>

Try http://www.steaksandwich.com

MiKeY

P.S. I do not send ANY sensitive info over a wireless device. If you transmit it you deserve to have it intercepted as far as I'm concerned.

The kit uses a simple Phase Lock Loop (PLL) chip to invert the
sideband. Radio Shack sells the chip. Very inexpensive. It might come
with a data sheet too. I'm not sure. I think the part number is
LM467. You'll have to double check.

A scanner becomes a HAM RADIO when a HAM OPERATOR uses it to monitor HAM frequencies. The federal law was made SPECIFICALLY to OVERRULE stupid state laws and protect Ham Radio operators.

I can have my scanner in my car in ANY state and be protected by federal law. Think what you will, but I have read the law and know what it says. I can also wear a headset in my state while I am in my car (illegal to others) because I am a Ham Operator.

I do not post information unless I know 100% that it is correct.

The Motron is the cheapest unit I have ever seen, around $59
I beleive the website is motron.com but check YAHOO if it is not
correct. The Ramsey you can order through any Radio Shack. or check
Ramsey.com (I think)

964. Mobile antenna for 800 Mhz band - Looking for 'been there done that' advice

Newsgroup: rec.radio.scanner
Date: 1997-07-10 00:00:00 UTC
From: Bob Brubaker <bob@belvoir.army.mil.NOSPAM>
Message-ID: <33C4C737.58D8@belvoir.army.mil.NOSPAM>
Source record: 192084

I'm looking for a mobile antenna that will work OK on all the bands but the 800 Mhz band is the one I'm most concerned about.

I've been trying different length's of mag mount vertical whips. Seems a 2mtr 1/4 wave works better then an 800Mhz 1/4 wave. Suspect it's the extra capture area. I would guess that the longer the whip gets and still works well on 800Mhz the better it will work the lower freqs. But it sure takes a lot of time since one should really drive around a bit before deciding that the new length is better.

Just for kicks I tried some other antennas that we're on the car. Was also surprised that a short CB antenna worked better then a 2mtr 5/8th wave. Would have thought the big coil at the base of the CB would have blocked 800mhz

F O R S A L E

(add shipping to prices...)

MOTOROLA MTX9000 fm handi-talkie radio,
model H01WCF4DB5AN NX type WCMA.
900mHz range. With charger and info.
Only $499.

COAX CABLE ---- heavy-duty, 1cm diameter, black plastic
covering, with foam dielectric. New, was on wooden spool
until I unwound it to get approximate length of 300+ feet.
No marking on cable; spool label says 1GHz. From cable
TV upgrade, probably 75 ohm. $ 50 shipped.

..... FOR YOUR DRIVING PLEASURE .....
1929 Mercedes SSK kitcar on VW chassis. Just completed, never titled.
Yellow, with brown fenders and running board, tan convertible top, side
curtains, and tonneau cover. Gold trim instruments.

COBRA 18-ULTRA CB ---- 40 channel, pushbutton tuning, with 3
NOAA weather channels. Includes microphone, but no mounting
hardware. $ 35.

LEXMARK/IBM PORTABLE PRINTER 5183 ---- powered by rechargable
battery or AC wall adaptor (included), this printer is only
11.5" x 3.5" x 2", and weighs about 2.5 pounds with battery
in place. Using silent thermal print head, it will print on
either thermal fax paper or on regular paper using the enclosed
thermal transfer ribbons. Very quiet in operation, and because
it runs on a battery, it is completely portable, for use with
laptop computers anywhere. Includes parallel port cable. $89.
.

ANADEX WORD-SCRIBE PRINTER ---- heavy duty dot matrix printer.
Multiple ports, but no literature so only parallel port in use
now. Tractor or friction feed. Fast, good quality; 17-inch
platten. $ 15

------------------ F L A S H L I G H T S ---------------------

4-D cell (2x2 style), krypton bulb. In box, never used.
$5 + shipping.

6-D cell multifunction lantern. Sleek tubular style with
bright incandescent light at end, 6W fluorescent bulb
along bottom, and flashing red and yellow on top. Also

has electronic sonic alarm that can be switched on with
the flashing lights. In box, never used. $12 + shipping

3-C cell Eveready worklight-style. Bright yellow with
hook for hanging, frosted bulb to diffuse light over area.
Unused, but no box. $5 + shipping

Batteries NOT included.....

COCA-COLA caps. Red cloth, white lettering. New.
$8 each + shipping. Only 9 available.

add shipping to all prices, only in US....
if interested, leave e-mail...

: >know you have and are willing to fight for!

: Stories like this always make me suspicious. Who was the ham? What
: was the reason the antennas were taken down? Did the ham make any
: threats to police/neighbors? I just can't picture police officers
: climbing on a roof or up trees to do this. You need to provide more
: details if you want to be taken seriously.
: Jeff KH2PZ

Actually, both stories are suspicious! No names, calls, etc. to follow up on,
just a comment thrown out. Many hams rallied behind the young EC in KY (I
think) who was "arrested" by the local police, and his radio taken for
"impersonating a public official", and I believe all charges were dropped.
There has got to be more to these stories! If not, get the ARRL involved,
and contact Newsline, etc. to get the word out. But, my feeling is that there
is more to the story we aren't hearing..... Let's hear it!

The first Pro-60 I received from Radio Shack did the same thing.
Doing nothing meant no display at all and no beeps to indicate a low
set of batteries. Quite frustrating with brand new ones!

Problem turned out to be the connection between the battery holder and
the main unit. No way of knowing which. Do know that after I
returned it to the store for a fresh one all worked fine ever since.

So what's new? It's been that way since 1994. The fact that this law
is nearly unenforceable has completely escaped the folks who wrote it.

As for *publication* of mod info, read it again. It doesn't say that.

To regulate the publication of this information would be a pointless
exercise because the first court it hits would declare the whole mess
unconstitutional.

Note also that they didn't mention *construction* of a frequency
converter. You can still build one. You can still publish
construction details.

Don't forget, it ain't hard to make an LO. The FCC overlooked the
possibility that scanner manufacturers could have an external LO input
to their radios. You could build or buy a programmable LO (quite a
generic thing) and insert the input in to the scanner. A feature like
that might be coming anyway so that scanner users can listen to Spread
Spectrum transmissions.

These design and use rules are bogus balderdash. It's all political
fluff to make anti-technological doofuses feel good. You can still
modify your radios. The FCC just wants to make things difficult for
you. The real state of affairs is still: Listen all you want. Just
don't tell anyone...

BTW: those of you who spew JBT theories, take your thread elsewhere.
The FCC doesn't have a police force of its own, so enforcement is
unlikely (unless you really want to become a pain in ass to them).
Besides, I have kill filters, and I use them.

>some who like to listen to cell phone conversations have made a
>science out of determining their scanners IF(s) and listening to the
>image frequency which is the cell freq + the IF.

An image will always be spaced 2*IF from the frequency indicated
on the tuning display of the radio. Whether that's 2*IF above or
below the indicated frequency depends on whether the receiver
uses low side or high side injection.

So if you were listening at an indicated 909 MHz, the scanner has a
10.7 MHz IF, and the scanner uses low side injection, then the cell
frequency being imaged will be 887.6 MHz. If the scanner uses high
side injection, indicated frequency will be cell frequency - 2*IF. In this
example, it would be 866.2 MHz. That's locked out too, so in this case
you're hosed if your scanner uses high side injection.

It doesn't matter what the display indicates, however, if your intent
is to exploit a weakness of superhetrodyne design in order to monitor
cellular phone transmissions. It is still a federal crime to listen under
the ECPA statute, and it is also a violation of the Communications
Act of 1934 (as amended) to divulge the contents of anything you
might hear, or to profit by any information you might have gained
by listening. Of course lots of people do it anyway, being scofflaws,
but that doesn't make it legal.

In the proximate case, two federal statutes were violated, but local police generally don't have jurisdiction in federal cases. However, many states have their own anti-eavesdropping statutes, and local police can act under the color of those.

Hello, my name is A.J. i make web pages at probaly the lowest cost on th e internet with a one time fee of 20.00$ you will get 1 homepage a 2 additional web page's.

each page after that will cost -- 10.00$

there will be special's every now and then. it work's like this you want a page. I will work on it from what you want on it. Then when i get the money you will receive your main page and the 2 additional page's.

go to my web site at: http://www.imcnet.net/~acleary/

984. Digital PL for JT1000's

Newsgroup: rec.radio.scanner
Date: 1997-07-11 00:00:00 UTC
From: bundy@medics.com
Message-ID: <33c8628e.88705873@nntp.best.com>
Source record: 191855

Can someone with a JT1000 or knowledge of how to program them advise me on how to enter a digital PL, such as D506 into the radio? It's pretty self explanatory for units like a GP300, which has a scrollable feature on the software for TPL and DPL, but I program my JT's from the keypad. Any assistance would be great. Please e-mail me if you can help.

Thanks.

Picked up the 2045 and am very pleased (was using a 2022). I know
there are better desktop radios (like the 2042, 9000) but I didn't
really need more than 200 channels or computer interface, so the extra
money saved can go towards my next SW radio.

987. Legislative Alert: Scanners Under Attack by Congress

Newsgroup: rec.radio.scanner
Date: 1997-07-11 00:00:00 UTC
From: larry@grove.net
Message-ID: <5q5p41$1uq@news3.his.com>
Source record: 191858

First I would like to thank my old friend Larry Miller at National Scanning Report for the heads up on this bill that is moving through Congress.

To all my fellow hobbyists on SCAN-L, UseNet radio groups, and the Grove Scanner Groups I have some bad news that DIRECTLY effects the radio hobby above 30 MHz. I'm not going to wait on the presses here at Grove to roll because this legislation needs to be stopped now before it gets out of committee. This bill will probably end the scanner hobby is we know it.

Another assault on the scanning hobby has begun by Congress and our dear, dear friend the honorable Edward Markey (D-MA). Markey has introduced H.R. 1964. This bill in section 104 makes major changes to Section 302 (d) of the Communications Act of 1934 (47 U.S.C. 302(d)). Most of you who are students of the cellular telephone frequency wars should remember this section. If not let me refresh your memory. This is the section of US Code that prohibits the manufacture of any scanner capable of receiving the cellular telephone bands.

Well Markey has taken this to a new level with H.R. 1964. If passed the new language would now read:

(a) The Commission shall prescribe and make effective regulations denying equipment authorization (under part 15 of title 47, Code of Federal Regulations, or any other part of that title) for any scanning receiver that is capable of:

(1) receiving transmissions in the frequencies allocated to a commercial mobile
^^^^^^^ ^^^^^^
radio service (as such term is defined in section 332(d));
^^^^ ^^^^^^
(2) readily being altered by the user to receive transmissions in such frequencies, or

(3) being equipped with decoders that convert digital commercial mobile transmissions to analog voice audio.

(b) Effective Date of Prohibitions on Regulation Amendments -- The prohibitions contained in section 302 (b) of the Communications Act of 1934 shall apply with respect to the changes made by the Federal Communications Commission in its regulations to implement the amendments made by subsection (a) of this section beginning 1 year after the effective date of such changes.

<<<<<snip>>>>>

On the surface this looks like a yawner. But lets dig a little deeper into Markey's bomb shell and see what it really says. What is the commercial mobile radio service or CMRS?

From Bennett Z. Kobb's Spectrum Guide let's see what frequencies this effects. Comments in parenthesis are mine.

"The FCC is changing the terminology it traditionally has used to classify radio services. The new terminology is somewhat more opaque. An essential distinction is between PMRS and the commercial Mobile Radio Services (CMRS). Licensees of CMRS businesses provide for-profit, telephone interconnect (mobile and portable telephone or dial-up paging) service to the public.

"Examples of CMRS include private paging services (except for not-for-profit, internal paging systems); Business Radio Service Systems (anything with an IB designation in the Police Call consolidated frequency list folks-Larry); Specialized Mobile Radio (SMR) services (this hits the 851-866 MHz band and that includes most the comms that the new trunk tracker can monitor including the majority of the public service agencies using trunked systems); and 220-222 MHz land mobile systems, to the extent all of these offer for-profit, telephone-interconnected service to the public; Public Mobile Services such as Paging and Radiotelephone services and the Cellular Radiotelephone Service the 454 MHz and 800 MHz air-ground radiotelephone service; the Offshore Radiotelephone Service; most types of mobile satellite services; and the Personal Communications Services (PCS).

"Previously, most for-profit mobile services were called "radio common carriers." This term has not completely disappeared from use.

"Recent legislation brought all for-profit mobile radio services under the CMRS umbrella. Some former PMRS services were reclassified as CMRS because they are largely devoted to for-profit service with interconnection to the public telephone network. In some cases PMRS and CMRS operations share bands."

Now let's look at the bottom line. Here are the frequencies you will lose in any future scanner you will buy if this bill becomes law.

Commercial Mobile Radio Services

1) Private Paging Services
Private carrier paging system (PCPS): 929-930/931-932 MHz

2) Business Radio Services

VHF low band: 30.76-31.24 (9 discrete freqs)/33.14-33.16/33.40/35.02-35.14/35.18/35.7-35.72/35.88-35.98/42.96-43.00 MHz
VHF Hi-band: 151.625-151.955/154.570-154.600 MHz
UHF band: 457.525-457.600/460.650-462.1875/465.650-467.1875/462.750-462.925/467.750-467.925/463.200-465.000/468.200-470.000 MHz

There are also a number of chunks of the 470-512 MHz that will be removed.

3) Specialized Mobile Radio (SMR) Services

851-866 (806-821 MHz)/ 935-940 (896-901 MHz)

This is the only area I see that we can fight this law. Those of you who have trunk trackers look in your trunk freq book and see how many public safety agencies have been allowed to invade this portion of the spectrum. There just wasn't enough room from them in the 866-869 MHz portion of this band. I see this as the only area we can really fight this resolution, the publics right to hear public safety agencies (even though the SMR bands are private thanks to the FCC auctions of the spectrum). The other scary part of this legislation is that no decoders would be allowed that would decode digital commercial mobile radio services. Can you say digital Motorola trunk systems? Wonder how much they donated to the Markey campaign? As I have said on many occasions and in the April 97 MT article on all this, "follow the money trail." No wonder Mot didn't care about the 235. It was only a flash in their pans with this legislation.

4) Land Mobile Services in the 220-222 MHz region (recent reg changes have turned this over to the CMRS)

5) Public Mobile Services
A) Paging and Radiotelephone Services

35.2-35.66/43.2-43.66 MHz/152.030-152.240/152.480-152.840 MHz
154.625/157.740-158.100/158.460-159.700 MHz

B) Cellular Radiotelephone Service
869-894 MHz (824-849 MHz mobiles)

C) 454 MHz Air-Ground Radiotelephone Service
454-455 MHz (459-460 MHz mobiles)

D) 800 MHz Air-Ground Radiotelephone Service
894-896 MHz (849-851 MHz mobiles)

6) Offshore Radiotelephone Services

157.200-157.400/161.800-162.000 MHz/AMTS 216-220 MHz

7) Satellite Mobile Services

137-138 MHz NVNG (148-150.050 uplinks)/399.9-400.050
1525-1559/1610-1660.5 MHz

8) Personal Communication Services (PCS)

901-902/930-931/940-941/1850-1990 MHz

So there you have it. The above listed frequencies would have to be removed from new scanners being made prior to the type acceptance of

any new scanner. Existing models would have to be decertified then recertified to prove that the new illegal to listen to ranges couldn't be received (the AR-8000 syndrome). This is the situation we have today with the cellular bands and it would now be expanded to the commercial mobile radio service if HR 1964 is passed.

Ladies and Gentlemen I think you can see this is a serious threat. If you don't get involved this time in stopping this legislation, you will see the hobby of scanning listening cease to exist in the very near future. Get off your rears and write your elected representative right now. This potential new law is in the House Commerce Committee right now. Let's kill it before it gets to the floor of the House and it becomes law.

Please give this message the widest possible circulation. Only numbers of voters will overcome the millions that our elected officials have taken in campaign contributions and will get this insanity stopped.

I will have updates as they become available and keep a watch at www.grove.net and the scanner discussion forums as new info is available.

73 to all and let's start writing/faxing today,

990. Improved TRUNKER.EXE V3.0 NOW AVAILABLE!

Newsgroup: rec.radio.scanner
Date: 1997-07-11 00:00:00 UTC
From: rickch19@sgi.netxx
Message-ID: <5q5v4v$9r0$2@taurus.bv.sgi.net>
Source record: 191861
Cross-posted to: alt.radio.scanner.,rec.radio.scanner,phl.scanner

> IS THERE A NEWER TRUNKER.EXE PROGRAM OUT THERE THAT DISPLAYS THE CORRECT
> FREQUENCY ASSIGNMENTS?
> IF SO, PLEASE LET ME KNOW THE WEB ADDRESS OR SEND ME A ATTACHED COPY.

I have recently received a ** GREATLY REVISED ** version of the
TRUNKER.EXE file.

*** PLEASE NOTE ***: I am **NOT** the author of this software, I was
sent a copy of the software to post anonymously. I can NOT provide
assistance to
the operation of the software. I suggest you post articles to SCAN-L,
TRUNKCOM, alt.radio.scanner, & rec.radio.scanner to get support from
the author, whoever that is.

Version 3.0 is available via my web page, URL below.

Features include:

Features

* Decodes and displays the data stream
* Remembers, via TXT files, the characteristics of the trunked system,
on a per-system basis.
* When identifying a previously monitored
system, retrieves the stored data from text files saved in previous
runs.
* Allows the user to augment the group and individual IDs with
colors designations, priorities, and a text description.
* Will drivea AOR8000 in 'trunk-tracking' mode using the TxOut lead
of COM1
*Allows on-screen input of group and individual text descriptions
while
trunker is running
* Upon first encountering a new individual ID,provides an initial text
annotation value
indicating the group with which it was first used.

Requirements

*Trunker 3.0 is intended to run under MSDOS. Although it has been
shown to run under Windows-95, no assurances are made of compatability
or fitness for use.
*Trunker 3.0 requires the data slicer to apply
its digital output to the CTS input of COM1, and COM1 is required to
use the standard interrupt and I/O addresses.

Please read this whole thing through and you WILL NOT think it's a
SCAM!
Believe me!!!!!!

A little while back, I was browsing these newsgroups, just like you are
now, and came across an article similar to this that said you could make
thousands of dollars within weeks with only and initial investment of
$5.00 !! So I thought, "Yeah, right, this must be a scam," like most
of us, but I was curious, like most of us, so I kept reading. Anyway,
it said that you send $1.00 to each of the 5 names and addresses listed
in the article. You then place your own name and address at the bottom
of the list at #5, and then post the article in at least 250
newsgroups.(There are thousands) No catch, that was it.

So after thinking it over, and talking to a few people first, I thought
about trying it. I figured what have I got to lose except 5 stamps and
$5.00, right?
```

Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office(1-800-725-2161) and they confirmed that it is indeed legal! Then I invested the measly $5.00.............

Well GUESS WHAT!!?? Withing 7 days, I started getting money in the mail!! I was shocked I still figured it would end soon, and didn't give it another thought. But the money just kept pouring in. In my first week, I made about $20.00-$30.00. By the end of the second week I had made a total of over $1,000.00!!!!!!!! In the third week I had over $10,000.00 and it's still growing. This is now my fourth week and I have made a total of just over $42,000.00 and it's still coming in........ it's certainly worth $5.00, and 5 stamps, I spent more than that on the lottery!!

Let me tell you how this works and most importantly, Why it works... also, make sure you print a copy of this article NOW, so you can get the information out of it as you need it. The process is very simple and consists of 3 easy steps:

STEP 1 : Get 5 seperate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 5 $1.00 bills and place ONE inside EACH of the 5 pieces of paper so that the bill will not be seen through the envelope to prevent theivery. Next, place one paper in each of the 5 envelopes, each with a piece of paper stating the above phrase and a $1.00 bill. What you are doing is creating a service by this. THIS IS PERFECTLY LEGAL!!

Mail the 5 envelopes to the following addresses :

#1 Betty Dinku

STEP 2 : Now take the #1 name off the list that you see above, move the other names up (5 becomes 4, 4 becomes 3, etc...) and add YOUR name as number 5 on the list.

STEP 3 : Change anything you need to, but try to keep this article as close to the orgininal as possible. Now, post your mended article to at least 250 newsgroups. (I think there are more than 18,000 groups) All you need is 250, but remember, the more you post the more money you make!! Don't know how to post in the newsgroups? Well do exactly the following:

FOR NETSCAPE USERS,

1) Click on any newsgroups, like normal. Then click on "To News," which is in the top left corner of the newsgroups page. This will bring up a message box. (If you can not find "To News," click on compose message.)

2) Fill in the SUBJECT with a flashy title, like the one I used, some to catch the eye!!!!

3) Now go to the message part of the box and retype this letter exactly as it is here, with the exception of your few changes. (Remember to add your name to number 5 and move the rest up)

4) When you're done typing in the WHOLE letter, click on 'FILE' above the send button. Then, 'SAVE AS..' DO NOT SEND YOUR ARTICLE UNTIL YOU SAVE IT. (So you don't have to type this 200 times :-)

5) Now that you have saved the letter, go ahead and send your first copy! (Click the 'SEND' button in the top left corner)

6) this is where you post all 200!! OK, go to ANY newsgroup article and click 'TO NEWS' button again. Type in your flashy subject in the 'SUBJECT BOX', then go to the message and place your cursor here. Now click on 'ATTATCHMENT' which is right below the 'SUBJECT BOX'. Click on attach file then find your letter wherever you saved it. Click once on your file then click 'OPEN' then click 'OK'. If you did this right, you should see your filename in the 'ATTACHMENT BOX' and it will be shaded.

NOW POST AWAY!!!!

IF YOU'RE USING INTERNET EXPLORER :

It's just as easy, holding down the left mouse
button, highlight this entire article, then press the 'CTRL' key and 'C'
key at the same time to copy this article. Then print the article for
your records to have the names of those you will be sending $1.00 to.

Next, go to the newsgroups and press 'POST AN
ARTICLE' type in your flashy subject and click the large window below.
Press 'CTRL' and 'V' and the article will appear in the message
window. **BE SURE TO MAKE YOUR ADDRESS CHANGES TO THE 5 NAMES.** Now
re-highlight the article and re-copy it so you have the
changes......then all you have to do for each newsgroup is 'CTRL' and
'V' and press 'POST'. It's that easy!!!!!!!

THAT'S IT!!!! All you have to do is jump to different newsgroups and
post away, after you get the hang of it, it will take about 30 seconds
for each newsgroup! **REMEMBER, THE MORE NEWSGROUPS YO POST IN, THE
MORE MONEY YOU WILL MAKE!!!!! BUT YOU HAVE TO POST A MINIMUM OF 250**

That's it! You will begin receiving money from around the world withing
days! You may eventually need to rent a P.O. Box due to the large
amount of mail you receive. If you wish to stay anonymous, you can
invent a name to use, as long as the postman will deliver it. **JUST
MAKE SURE ALL THE ADDRESSES ARE CORRECT**

Now the WHY part :

Out of the 250 postings, say I receive only 5
replies (a very low example). So then I made $5.00 with my name at the
#5 on the letter. Now, each of the 5 persons who just sent me $1.00
make the minimum 250 postings, each with my name at #4 and only 5
persons respond to each of the original 5, that is another $25.00 for
me, now those 25 each make 250 minimum postings with my name at #3 and
only 5 replies each, I will bring in an additional $125.00! Now, those
125 persons turn around and post the MINUMUM 250 with my name at #2 and
only receive 5 replies each, I will make an additional $625.00! OK,
now here is the fun part, each of those 625 persons post a MINUMUM 250
letters with my name at #1 and they each only receive 5 replies, that
just made me $3,125.00!!!! With an original investment of only $5.00!
AMAZING!! And as I said 5 responses is actually VERY LOW! Average is
probably around 20 to 30! So lets put those figures at just 15
responses per person. Here is what you will make:

at #5 $15.00

at #4 $225.00

at #3 $3,375.00

at #2 50,625.00

at #1 $759,375.00

When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $5.00 to the names on the list, putting your name at #5 again. And start posting again. The thing to remember is, do you realize that thousands of people all over the world are joining the internetand reading these articles everyday, JUST LIKE YOU are now!! So can you afford $5.00 to see if it really works?? I think so.... People have said, "What if the plan is played out and no one sends you the money? So what!! Waht are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are will to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet. Remember, play FAIRLY and HONESTLY and this will work. You just have to be honest. Make sure you print this article RIGHT NOW, also. Try to keep a list of everyone that sends you money and always keep an eye on the newsgroups to make sure everyone is playing fairly. Remember, HONESTY IS THE BEST POLICY. You don't need to cheat. The basic idea is for every one to make money!!

Good Luck to all and please play fairly and reap the huge rewards from this, which is tons of extra CASH. **By the way, if yo try to deceive people by posting the message with your name in the list and not sending the money to the rest of the people already on the list, you will NOT get as much. Someone I talked to, knew someone who did that and he only made about $150.00, and that's after seven or eight weeks! Then he send the 5 $1.00 bills, people added him to their lists, and in 4-5 weeks he had over $10k. this is the fairest and most honest way I have ever seen to share the wealth of the world without costing anything but our time!!!!!

NOT! ! !.
This scanner is NOT pre-law.
This scanner is not full 800mhz.
There are mods for it.
The Ultimate Scanner (CHEEK-3) has many.

> 420 - 450 mhz - 70 cm Ham 450 - 470 mhz - UHF
> Band
> 470 - 512 mhz - T Band

As opposed to the expense of modifing your BC120XLT, you may want to
just sell it & purchase a new handheld with the 800/900Mhz bands and one
that has a better scan/search rate & some newer features. That way you'd
have a newer scanner w/ a waranty.

1004. CABLE TV--FREE DECODER PLANS--

Newsgroup: rec.radio.scanner
Date: 1997-07-11 00:00:00 UTC
From: Edward Witt <superted@worldnet.att.net>
Message-ID: <01bc8e47$b9eefa00$537074cf@default>
Source record: 191875

Now you can get new plans to build a Cable Descrambler System, US and UK plans.

This is not the origonal Radio Shack plan (now obsolete), but a choice of six new up to date plans designed to work on any cable box in any area. Just send me details of which cable box you have and in what area you reside as the plan needed will vary area to area, and you will be able to view all premium and pay per view channels.

It works on all Cable Tv Systems. The parts to make the box cost appoximately $15 (depending on the plan) and you can find them at any local electronic part supplier(US Residents will be supplied with radio shack part numbers). British Sky Cable descrablers cost approx 20 Pounds. Remember this is for educational purposes only, you still have to pay for the channels you view. I have to say that to protect myself for any liablity.

For the Plans just send $ 2 or 2 Pounds to:

Ed Hacker
409 Adams Street # 7
Hoboken, NJ 07030
USA

The reason I charge two dollars is for the stamp, envelop, and paper your plans are on. I am doing this for you not for me to make money. Lets get real you cant buy much for two bucks. I am not in this for the money but to get back at the cable companys that over charge people.

CABLE HANDBOOK (Additional $2)

Everything you ever wanted to know about cable boxes. Includes a cross reference list for upgrading your box using upgrade converts, cubes, plug-in activators and service code-generators. Also explains general cable operation, this handbook is very COMPLETE, a must have!

TURN ME ON!

Turn on all your premium channels with nothing to buy.

The Notch Filter

A notch filter allows you to selectively descramble channels. For instance, if HBO is on channel 7 and Cinemax is on channel 14 or pay-per-view is on 22, you may build a notch filter to descramble each of those channels. This method is fairly simple to build; However, it requires several more parts than the Fifteen Dollar Box. This system will work on your cable system, no matter what frequency your cable system operates on. A cable box is NOT

REQUIRED, and parts cost in the range of $25-30 depending on how many channels pay channels you wish to descramble. NOTE: I used channel 7,14 and 22 as an example. Your premium services may be on other channels and the notch filter can be built for whatever channel your premium services are on. (between the range of 2-22) Parts can be purchased from a electronics wholesaler/retailer in your phone.

The Gated Sync is the Grand Daddy of descramblers (in band and out band). It can be configured to operate on your cable systems frequency. This system is for the serious home electronics buff. It is a bit more complex to build; However, it sells for a lot of money. And, it will descramble EVERY channel.

SSAVI was created by Zenith, and used by many Zenith converters. The system is very difficult to build, but it will descramble EVERY channel, and also sells for a lot of money. Novices should not attempt to build the SSAVI system.

FREQUENTLY ASKED QUESTIONS

What is a Descrambler?

A descrambler is a device that restores the picture and sound of a scrambled channel. In most cases, ALL channels which are scrambled will be restored.

Are Descramblers legal?

YES! It is legal to build, sell, ship, use, and own a descrambler; However, when you use a descrambler, it is your responsibility to notify the cable company that you are accessing their signal.

Do I need a converter from my cable company?

In most cases NO. A cable ready VCR or TV will work.

Is it difficult to build a descrambler?

Turn me on, the Fifteen Dollar Box, the Oak converter and the Foil method are very simple methods! The instructions provide step by step instructions. No special skill or knowledge are needed. The Notch filter is still fairly simple. The Gated Sync is not for the beginner, it requires electronics knowledge.

Can I build more than one?

YES! You may build as many descramblers as you want! They are legal to sell and demand fairly high prices!

Just send me details of which cable box you have and in what area you reside as the plan needed will vary area to area
For the Plans just send $ 2 or 2 Pounds to:

>my phone be "tapped" with a scanner?

Well, a cordless phone uses =radio waves= regardless of whether or not it
is a digital signal. If your phone uses digital transmissions, then it
is secure. All a scanner user will hear is static, if they hear anything
at all.

I though he was talking about a radio scanner (i.e. police, fire,
ambulance, air, gov't.). What led you to conclude something else??? He
did say that he wanted one with

<snip>
Programable would be good, maybe 10 or 20 channels. Anybody got
<snip>

I don't know about the rest of you or even you (Mr. JDKerkes) but that
right there screams radio scanner. Maybe I am the one that's screwey in
the brain........

I leave it to the rest of you good people out there to decide for
yourself..........

jdkerkes wrote:

How hard is it to build a Scanner, or any other kind of radio recever?
(I'm new to radios)
or would it be chearer to just buy one?
if not are there any kind of instruction avlible on the Internet?

Although the follow-ups haven't appeared on my server yet, I'm told my note generated some mixed response about what I was looking for. I thought it was clear, but communication can be a funny thing. Anyway, I want a public service band radio receiver, that type of scanner, the sort you'd expect to find in this newsgroup...not the kind you typically use to scan photos into computers.

Sorry for any confusion.

If you have a lead on such a radio-type scanner, write back!

- Dave

Adam,

Did you try it with www. in front? If I use
http://www.policescanner.com it works just fine. If you use
http://policescanner.com you'll get an error saying the server does not
have a DNS entry.

Hi Folks,
What are the actual frequencies programmed into the Dallas
Police Scanner as-heard via realaudio on http://www.policescanner.com

The web page does not indicate the actual frequencies -- are these
UHF or 800 Mhz?

thanks,
Joe

1015. CABLE TV--FREE DESCRAMBLER PLANS__

Newsgroup: rec.radio.scanner
Date: 1997-07-11 00:00:00 UTC
From: Edward Witt <superted@worldnet.att.net>
Message-ID: <01bc8e2a$9b5c0140$397174cf@default>
Source record: 191886

Now you can get new plans to build a Cable Descrambler System, US and UK plans.

This is not the origonal Radio Shack plan (now obsolete), but a choice of six new up to date plans designed to work on any cable box in any area. Just send me details of which cable box you have and in what area you reside as the plan needed will vary area to area, and you will be able to view all premium and pay per view channels.

It works on all Cable Tv Systems. The parts to make the box cost appoximately $15 (depending on the plan) and you can find them at any local electronic part supplier(US Residents will be supplied with radio shack part numbers). British Sky Cable descrablers cost approx 20 Pounds. Remember this is for educational purposes only, you still have to pay for the channels you view. I have to say that to protect myself for any liablity.

For the Plans just send $ 2 or 2 Pounds to: Ed Hacker
409 Adams Street # 7
Hoboken, NJ 07030
USA

The reason I charge two dollars is for the stamp, envelop, and paper your plans are on. I am doing this for you not for me to make money. Lets get real you cant buy much for two bucks. I am not in this for the money but to get back at the cable companys that over charge people.

CABLE HANDBOOK (Additional $2)

Everything you ever wanted to know about cable boxes. Includes a cross reference list for upgrading your box using upgrade converts, cubes, plug-in activators and service code-generators. Also explains general cable operation, this handbook is very COMPLETE, a must have!

TURN ME ON!

Turn on all your premium channels with nothing to buy.

The Notch Filter

A notch filter allows you to selectively descramble channels. For instance, if HBO is on channel 7 and Cinemax is on channel 14 or pay-per-view is on 22, you may build a notch filter to descramble each of those channels. This method is fairly simple to build; However, it requires several more parts than the Fifteen Dollar Box. This system will work on your cable system, no matter what frequency your cable system operates on. A cable box is NOT REQUIRED, and parts cost in the range of $25-30 depending on how many

channels pay channels you wish to descramble. NOTE: I used channel 7,14 and 22 as an example. Your premium services may be on other channels and the notch filter can be built for whatever channel your premium services are on. (between the range of 2-22) Parts can be purchased from a electronics wholesaler/retailer in your phone.

The Gated Sync is the Grand Daddy of descramblers (in band and out band). It can be configured to operate on your cable systems frequency. This system is for the serious home electronics buff. It is a bit more complex to build; However, it sells for a lot of money. And, it will descramble EVERY channel.

SSAVI was created by Zenith, and used by many Zenith converters. The system is very difficult to build, but it will descramble EVERY channel, and also sells for a lot of money. Novices should not attempt to build the SSAVI system.

FREQUENTLY ASKED QUESTIONS

What is a Descrambler?

A descrambler is a device that restores the picture and sound of a scrambled channel. In most cases, ALL channels which are scrambled will be restored.

Are Descramblers legal?

YES! It is legal to build, sell, ship, use, and own a descrambler; However, when you use a descrambler, it is your responsibility to notify the cable company that you are accessing their signal.

Do I need a converter from my cable company?

In most cases NO. A cable ready VCR or TV will work.

Is it difficult to build a descrambler?

Turn me on, the Fifteen Dollar Box, the Oak converter and the Foil method are very simple methods! The instructions provide step by step instructions. No special skill or knowledge are needed. The Notch filter is still fairly simple. The Gated Sync is not for the beginner, it requires electronics knowledge.

Can I build more than one?

YES! You may build as many descramblers as you want! They are legal to sell and demand fairly high prices!

For the Plans just send $ 2 or 2 Pounds to: Ed Hacker
409 Adams Street
Hoboken, NJ 07030

Subject: [HearSat] Legislative Alert: Scanner Under Attack HR 1964 (Long Post)

First I would like to thank my old friend Larry Miller at National Scanning
Report for the heads up on this bill that is moving through Congress.

To all my fellow hobbyists on SCAN-L, UseNet radio groups, and the Grove
Scanner Groups I have some bad news that DIRECTLY effects the radio hobby
above 30 MHz. I'm not going to wait on the presses here at Grove to roll
because this legislation needs to be stopped now before it gets out of
committee. This bill will probably end the scanner hobby is we know it.

Another assault on the scanning hobby has begun by Congress and our dear,
dear friend the honorable Edward Markey (D-MA). Markey has introduced H.R.
1964. This bill in section 104 makes major changes to Section 302 (d) of the
Communications Act of 1934 (47 U.S.C. 302(d)). Most of you who are students
of the cellular telephone frequency wars should remember this section. If
not let me refresh your memory. This is the section of US Code that
prohibits the manufacture of any scanner capable of receiving the cellular
telephone bands.

Well Markey has taken this to a new level with H.R. 1964. If passed the new
language would now read:

(a) The Commission shall prescribe and make effective regulations denying
equipment authorization (under part 15 of title 47, Code of Federal

Regulations, or any other part of that title) for any scanning receiver that is capable of:

(1) receiving transmissions in the frequencies allocated to a commercial mobile
^^^^^^^^^^ ^^^^^^
radio service (as such term is defined in section 332(d));
^^^^ ^^^^^^
(2) readily being altered by the user to receive transmissions in such frequencies, or

(3) being equipped with decoders that convert digital commercial mobile transmissions to analog voice audio.

(b) Effective Date of Prohibitions on Regulation Amendments -- The prohibitions contained in section 302 (b) of the Communications Act of 1934 shall apply with respect to the changes made by the Federal Communications Commission in its regulations to implement the amendments made by subsection (a) of this section beginning 1 year after the effective date of such changes.

<<<<<snip>>>>>

On the surface this looks like a yawner. But lets dig a little deeper into Markey's bomb shell and see what it really says. What is the commercial mobile radio service or
CMRS?

>From Bennett Z. Kobb's Spectrum Guide let's see what frequencies this effects. Comments in parenthesis are mine.

"The FCC is changing the terminology it traditionally has used to classify radio services. The new terminology is somewhat more opaque. An essential distinction is between PMRS and the commercial Mobile Radio Services (CMRS). Licensees of CMRS businesses provide for-profit, telephone interconnect (mobile and portable telephone or dial-up paging) service to the public.

"Examples of CMRS include private paging services (except for not-for-profit, internal paging systems); Business Radio Service Systems (anything with an IB designation in the Police Call consolidated frequency list folks-Larry); Specialized Mobile Radio (SMR) services (this hits the 851-866 MHz band and that includes most the comms that the new trunk tracker can monitor including the majority of the public service agencies using trunked systems); and 220-222 MHz land mobile systems, to the extent all of these offer for-profit, telephone-interconnected service to the public; Public Mobile Services such as Paging and Radiotelephone services and the Cellular Radiotelephone Service the 454 MHz and 800 MHz air-ground radiotelephone service; the Offshore Radiotelephone Service; most types of mobile satellite services; and the Personal Communications Services (PCS).

"Previously, most for-profit mobile services were called "radio common carriers." This term has not completely disappeared from use.

"Recent legislation brought all for-profit mobile radio services under the CMRS umbrella. Some former PMRS services were reclassified as CMRS because they are largely devoted to for-profit service with interconnection to the public telephone network. In some cases PMRS and CMRS operations share bands."

Now let's look at the bottom line. Here are the frequencies you will lose in any future scanner you will buy if this bill becomes law.

Commercial Mobile Radio Services

1) Private Paging Services
Private carrier paging system (PCPS): 929-930/931-932 MHz

2) Business Radio Services

VHF low band: 30.76-31.24 (9 discrete
freqs)/33.14-33.16/33.40/35.02-35.14/35.18/
35.7-35.72/35.88-35.98/42.96-43.00 MHz
VHF Hi-band: 151.625-151.955/154.570-154.600 MHz
UHF band: 457.525-457.600/460.650-462.1875/465.650-467.1875/
462.750-462.925/467.750-467.925/463.200-465.000/468.200-470.000 MHz
There are also a number of chunks of the 470-512 MHz that will be removed.

3) Specialized Mobile Radio (SMR) Services

851-866 (806-821 MHz)/ 935-940 (896-901 MHz)

This is the only area I see that we can fight this law. Those of you who have trunk trackers look in your trunk freq book and see how many public safety agencies have been allowed to invade this portion of the spectrum. There just wasn't enough room from them in the 866-869 MHz portion of this band. I see this as the only area we can really fight this resolution, the publics right to hear public safety agencies (even though the SMR bands are private thanks to the FCC auctions of the spectrum). The other scary part of this legislation is that no decoders would be allowed that would decode digital commercial mobile radio services. Can you say digital Motorola trunk systems? Wonder how much they donated to the Markey campaign? As I have said on many occasions and in the April 97 MT article on all this, "follow the money trail." No wonder Mot didn't care about the 235. It was only a flash in their pans with this legislation.

4) Land Mobile Services in the 220-222 MHz region (recent reg changes have turned this over to the CMRS)

5) Public Mobile Services
A) Paging and Radiotelephone Services

35.2-35.66/43.2-43.66 MHz/152.030-152.240/152.480-152.840 MHz
154.625/157.740-158.100/158.460-159.700 MHz

B) Cellular Radiotelephone Service
869-894 MHz (824-849 MHz mobiles)

C) 454 MHz Air-Ground Radiotelephone Service
454-455 MHz (459-460 MHz mobiles)

D) 800 MHz Air-Ground Radiotelephone Service
894-896 MHz (849-851 MHz mobiles)

6) Offshore Radiotelephone Services

157.200-157.400/161.800-162.000 MHz/AMTS 216-220 MHz

7) Satellite Mobile Services

137-138 MHz NVNG (148-150.050 uplinks)/399.9-400.050
1525-1559/1610-1660.5 MHz

8) Personal Communication Services (PCS)

901-902/930-931/940-941/1850-1990 MHz

So there you have it. The above listed frequencies would have to be removed from new scanners being made prior to the type acceptance of any new scanner. Existing models would have to be decertified then recertified to prove that the new illegal to listen to ranges couldn't be received (the AR-8000 syndrome). This is the situation we have today with the cellular bands and it would now be expanded to the commercial mobile radio service if HR 1964 is passed.

Ladies and Gentlemen I think you can see this is a serious threat. If you don't get involved this time in stopping this legislation, you will see the hobby of scanning listening cease to exist in the very near future. Get off your rears and write your elected representative right now. This potential new law is in the House Commerce Committee right now. Let's kill it before it gets to the floor of the House and it becomes law.

Please give this message the widest possible circulation. Only numbers of voters will overcome the millions that our elected officials have taken in campaign contributions and will get this insanity stopped.

I will have updates as they become available and keep a watch at www.grove.net and the scanner discussion forums as new info is available.

In article <5q4eq8$9j1$1@newsd-111.bryant.webtv.net>, davecom@webtv.net says...
> while driving i have to keep the speaker smashed to my ear
>
I drive a tractor-trailer with a tt in my shirt pocket. I have no problem hearing it. Would that not suggest either you lead a mispent youth listening to rap or your tt is defective?

When I walk into stores I have to often turn the volumne down because everyone is trying to listen to what I am hearing.

You also may be getting low audio because of the poor signal from the defective antenna that comes with every stock tt.

Thanks to Larry and Larry for the warning.

Let me make this even easier for everyone out there:
1. Go to http://congress.nw.dc.us/c-span/elecmail.shtml for quick access to e-mail all members of congress (of course there are still a few dinosaurs there who don't even have e-mail).
2. E-mail YOUR own members of Congress. This is more effective because they fear being voted out more than anything else.
3. E-mail them often. Every day is good. This lets them know that you consider this a serious issue upon which you will base your next vote and that you may be energized to spread the word to other voters in their district.
4. The aforementioned web site (replace "elecmail.shtml" with "congdir.shtml") will give you a listing of who is on the commerce committee. If your member is on this committee you have a special responsibility right NOW because you can affect the bill while it is in the committee.

P.S. - Larry, I already sent my first warning to Rep. Tom Campbell of California

1019. AT&T 900 MHz phones

From: garyk@lucent.com
Message-ID: <5q5udv$qdm@ssbunews.ih.lucent.com>
Source record: 191890

Silly question: On a frequency listing sheet, I found that my AT&T 9120 phone uses a frequency range of 902 to 928 MHz. This implies that you can listen to these phones with a scanner at this range. But I thought these phones use digital data (1's and 0's) to transmit/receive - not analog voice. So what's the deal? Is my phone secure or not? Can my phone be "tapped" with a scanner?

Thanks in advance, Gary

>using it to butt in on the scene of a police or rescue unit, why are the
>police officers even bothering with pulling you over?

Exactly. In most cases, the cops could care less UNLESS you're making a nuisance of yourself and/or getting in their way.

I was born and raised in Minnesota, one of the most restrictive states of all when it comes to mobile scanners. Not even a ham exemption until a few years ago. I carried a scanner in my car from the day I turned 16 and got my license. Never had any problems. One time a cop came up to my car while I was talking on my CB in a parking lot. Asked what I was doing (I was 18 at the time) Just told him I was talking on the radio. He saw the scanner and asked "what does that one (radio) do?" I told him I used it for monitoring the fast-food drive-thru windows and gave him a quick demonstration with the Mc Donalds and Zantigos restaurants that were directly adjacent to the lot I was parked in. He was thoroughly impressed! After realizing that I hadn't been drinking, doing drugs, casing the joint, etc., and had no malicious intent, he wished me a good night and went on his way. Never said a word about the scanner or even told me to leave.

Did I smart off to the cop? No. Was I following him around to accident scenes? No. Was I blasting police calls over a PA speaker under my hood? No.

In general, if you're not being a jerk to them, they won't be a jerk to you. The police have more important things to do than follow people around and harass them about their scanners.

Listen for amateur radio on 145.800 and 145.985, voice AND packet radio, Callsigns R0MIR (Mir) and KC5UAC (Mike Foale). Mostly packet though. Mike has been using the R0MIR call mostly. They sometimes use 143.625 to talk to ground control.

>children and they are very conservative. (not a bad thing)

Actually, from what I understand happened... the judge had every right
to do what he did... and that was to say "Yep, looks like porn."

Correct me if I'm wrong, but I don't believe the judge issued ANY
warrant... not for Blockbuster, and not for the homes... so all
the judge did, was to give his opinion on a specific scene from the
film which was presented to him.

What OCAF did is wrong...
What the cops did is wrong...
and what Blockbuster did, giving out customer information without a
warrant, was wrong.

IF the judge did issue a warrant, the above statement of mine does not apply.

1028. Bearcat 800XLT Problem

Newsgroup: rec.radio.scanner
Date: 1997-07-11 00:00:00 UTC
From: 2006_1111@ridgecrest.ca.us
Message-ID: <33c5ac9f.111420329@news.ridgecrest.ca.us>
Source record: 191909

Does anyone know what would cause a BC 800XLT that otherwise preforms
well to be very weak in recieving anything in the 800 MHz range?
Antena connectors or good, and all other ranges recieve well. the 800
MHz range recieves, but barely. Any help would be appreciated.
Thanks,
GW

Dan,
Please don't take this the wrong way but,lets get our information correct
and not confuse anyone.
The PRO-2032 was NOT sold with the complete 800MHz enabled.
To enable FULL 800MHZ you have to remove 1 diode from 1 location and
install a switching diode in a diffrent location on the main board.
If anyone would like this modifaction, e-mail me back and I will be more
than happy to
give it to you.

Spam is also defined as "junk" e-mail. More or less receiving
commercial advertisements via e-mail, even if you have not requested and
advertisement from that company. I got one junk e-mail a couple of
weeks ago saying that if I sent $4 or $5, I could get manuals on how
avoid getting caught for drunk driving, building radar gun blocking
equipment, and other possible illegal activites. THe message even said
I requested to have the message sent to me but I did not. Spam is
getting stuck on some company's e-mail address list and that list is
sent to other companies, and so on, just like junk mail you receive at
your home.

> Steve Carlisle VE7AHL

IF and I emphasize the word *IF* the above story is anywhere near
true , I would suspect what the person in question was listening to

was an image frequency of a cell phone conversation that was taking place in the authorized cell phone band. I was at Radio Shack once and the salesman was demonstrating the frequency range of a scanner to a customer when we started hearing a quite titillating (guy-gal ;)) conversation on cell phone. Neither the customer nor the salesman could explain it until I butted in and told them it was an image frequency from the cellular phone band. FWIW if you'll check the newsgroups alt.radio.scanner and rec.radio.scanner you'll see that some who like to listen to cell phone conversations have made a science out of determining their scanners IF(s) and listening to the image frequency which is the cell freq + the IF.

I use the Radio Shack Magnet mount cellular antenna. It has decent gain at 800 mhz and because it is a co-linear with a coil in the middle, its overall length is approx. 1/4 wave on the vhf hi-band. It also picks up 450-470 pretty well too. Give it a try <about $25>

MiKeY

>
> I think it's possible.

They don't know that they are Hams unless the Hams have Ham Plates on
thier cars. I used to get harrassed all the time for the radios in my
car, until I got Ham Plates. Now they know I am allowed to have the
stuff and I have never been questioned on it since. (or pulled over
since then either!)

It does NOT matter which state or city has that law!!!! That is why the
FEDERAL law was made!! So that Ham operators wouldn't have to worry
about which states had which laws! Some Luitenant!! Doesn't even know
the Law!! I hope he tries to arrest a Ham, and gets sued!!!

This is not one of those debateable topics where everyone posts thier
opinions!! The law is clearly written.

I did not know the FCC could regulate information. I thought they could
ONLY regulate things that emit radio frequencies.

Did you have the unit unpluged for more than a few hours? That would do
it. Or if your unit is real old, then it may reset after being
unpluged, or power outage or glitch, for even a shorter period.

1049. Pro-2034 Power Supply Question

Newsgroup: rec.radio.scanner
Date: 1997-07-11 00:00:00 UTC
From: fkenn@airmail.net
Message-ID: <9D529D637A268692.49EE97BB332A8081.7FCE82475C8490EF@library-proxy.airnews.net>
Source record: 191930

I'm sure this issue has been addressed on this newsgroup. But since I cannot find any answer via web searches, etc., I have to ask this here.

The Radio Shack Pro-2034 scanner has been discontinued and has been sold at a substantial discount at a few RS discount outlets. I picked one up, thinking it might come in handy as a scanner for car use. But, the scanner uses an AC to AC converter, Model #20-411, which takes AC 120 volts and converts the voltage to 10 volts at 300 ma for the scanner.

Is this the way these devices have gone? I assumed that many devices such as this were running DC.

Also, is there a converter available so that one can run this scanner off an automobile DC cigarette lighter outlet? I assume not, but I figured I had better ask this, just in case someone has already been down this path and found a solution.

Many thanks in advance.

(I have read the threads related to scanners in cars and how one should hide them and be as discreet as possible....)

Please read this whole thing through and you WILL NOT think it's a
SCAM!
Believe me!!!!!!

A little while back, I was browsing these newsgroups, just like you are
now, and came across an article similar to this that said you could make
thousands of dollars within weeks with only and initial investment of
$5.00 !! So I thought, "Yeah, right, this must be a scam," like most
of us, but I was curious, like most of us, so I kept reading. Anyway,
it said that you send $1.00 to each of the 5 names and addresses listed
in the article. You then place your own name and address at the bottom
of the list at #5, and then post the article in at least 250
newsgroups.(There are thousands) No catch, that was it.

So after thinking it over, and talking to a few people first, I thought
about trying it. I figured what have I got to lose except 5 stamps and
$5.00, right?
```

Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office(1-800-725-2161) and they confirmed that it is indeed legal! Then I invested the measly $5.00.............

Well GUESS WHAT!!?? Withing 7 days, I started getting money in the mail!! I was shocked I still figured it would end soon, and didn't give it another thought. But the money just kept pouring in. In my first week, I made about $20.00-$30.00. By the end of the second week I had made a total of over $1,000.00!!!!!!!! In the third week I had over $10,000.00 and it's still growing. This is now my fourth week and I have made a total of just over $42,000.00 and it's still coming in........ it's certainly worth $5.00, and 5 stamps, I spent more than that on the lottery!!

Let me tell you how this works and most importantly, Why it works... also, make sure you print a copy of this article NOW, so you can get the information out of it as you need it. The process is very simple and consists of 3 easy steps:

STEP 1 : Get 5 seperate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 5 $1.00 bills and place ONE inside EACH of the 5 pieces of paper so that the bill will not be seen through the envelope to prevent theivery. Next, place one paper in each of the 5 envelopes, each with a piece of paper stating the above phrase and a $1.00 bill. What you are doing is creating a service by this. THIS IS PERFECTLY LEGAL!!

Mail the 5 envelopes to the following addresses :

#1 Betty Dinku

84 Jaffa St.

Jerusalem 94341

ISRAEL

#2 John Tropea

119 State Rd

G-16

Media, PA 19063

USA

#3 David J. Smith

310 Cloudview Dr.

Austin, TX 78745

USA

#4 Kris K.

1812 Holly Hill Drive

Austin, TX 78746

USA

#5 Jeff Reifschneider

2825 Monument Valley Dr.

Gering, NE 69341

USA

STEP 2 : Now take the #1 name off the list that you see above, move the other names up (5 becomes 4, 4 becomes 3, etc...) and add YOUR name as number 5 on the list.

STEP 3 : Change anything you need to, but try to keep this article as close to the orgininal as possible. Now, post your mended article to at least 250 newsgroups. (I think there are more than 18,000 groups) All you need is 250, but remember, the more you post the more money you make!! Don't know how to post in the newsgroups? Well do exactly the following:

FOR NETSCAPE USERS,

1) Click on any newsgroups, like normal. Then click on "To News," which is in the top left corner of the newsgroups page. This will bring up a message box. (If you can not find "To News," click on compose message.)

2) Fill in the SUBJECT with a flashy title, like the one I used, some to catch the eye!!!!

3) Now go to the message part of the box and retype this letter exactly as it is here, with the exception of your few changes. (Remember to add your name to number 5 and move the rest up)

4) When you're done typing in the WHOLE letter, click on 'FILE' above the send button. Then, 'SAVE AS..' DO NOT SEND YOUR ARTICLE UNTIL YOU SAVE IT. (So you don't have to type this 200 times :-)

5) Now that you have saved the letter, go ahead and send your first copy! (Click the 'SEND' button in the top left corner)

6) this is where you post all 200!! OK, go to ANY newsgroup article and click 'TO NEWS' button again. Type in your flashy subject in the 'SUBJECT BOX', then go to the message and place your cursor here. Now click on 'ATTATCHMENT' which is right below the 'SUBJECT BOX'. Click on attach file then find your letter wherever you saved it. Click once on your file then click 'OPEN' then click 'OK'. If you did this right, you should see your filename in the 'ATTACHMENT BOX' and it will be shaded.

NOW POST AWAY!!!!

IF YOU'RE USING INTERNET EXPLORER :

It's just as easy, holding down the left mouse
button, highlight this entire article, then press the 'CTRL' key and 'C'
key at the same time to copy this article. Then print the article for
your records to have the names of those you will be sending $1.00 to.

Next, go to the newsgroups and press 'POST AN
ARTICLE' type in your flashy subject and click the large window below.
Press 'CTRL' and 'V' and the article will appear in the message
window. **BE SURE TO MAKE YOUR ADDRESS CHANGES TO THE 5 NAMES.** Now
re-highlight the article and re-copy it so you have the
changes......then all you have to do for each newsgroup is 'CTRL' and
'V' and press 'POST'. It's that easy!!!!!!!

THAT'S IT!!!! All you have to do is jump to different newsgroups and
post away, after you get the hang of it, it will take about 30 seconds
for each newsgroup! **REMEMBER, THE MORE NEWSGROUPS YO POST IN, THE
MORE MONEY YOU WILL MAKE!!!!! BUT YOU HAVE TO POST A MINIMUM OF 250**

That's it! You will begin receiving money from around the world withing
days! You may eventually need to rent a P.O. Box due to the large
amount of mail you receive. If you wish to stay anonymous, you can
invent a name to use, as long as the postman will deliver it. **JUST
MAKE SURE ALL THE ADDRESSES ARE CORRECT**

Now the WHY part :

Out of the 250 postings, say I receive only 5
replies (a very low example). So then I made $5.00 with my name at the
#5 on the letter. Now, each of the 5 persons who just sent me $1.00
make the minimum 250 postings, each with my name at #4 and only 5
persons respond to each of the original 5, that is another $25.00 for
me, now those 25 each make 250 minimum postings with my name at #3 and
only 5 replies each, I will bring in an additional $125.00! Now, those
125 persons turn around and post the MINUMUM 250 with my name at #2 and
only receive 5 replies each, I will make an additional $625.00! OK,
now here is the fun part, each of those 625 persons post a MINUMUM 250
letters with my name at #1 and they each only receive 5 replies, that
just made me $3,125.00!!!! With an original investment of only $5.00!
AMAZING!! And as I said 5 responses is actually VERY LOW! Average is
probably around 20 to 30! So lets put those figures at just 15
responses per person. Here is what you will make:

at #5 $15.00

at #4 $225.00

at #3 $3,375.00

at #2 50,625.00

at #1 $759,375.00

When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $5.00 to the names on the list, putting your name at #5 again. And start posting again. The thing to remember is, do you realize that thousands of people all over the world are joining the internetand reading these articles everyday, JUST LIKE YOU are now!! So can you afford $5.00 to see if it really works?? I think so.... People have said, "What if the plan is played out and no one sends you the money? So what!! Waht are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are will to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet. Remember, play FAIRLY and HONESTLY and this will work. You just have to be honest. Make sure you print this article RIGHT NOW, also. Try to keep a list of everyone that sends you money and always keep an eye on the newsgroups to make sure everyone is playing fairly. Remember, HONESTY IS THE BEST POLICY. You don't need to cheat. The basic idea is for every one to make money!!

Good Luck to all and please play fairly and reap the huge rewards from this, which is tons of extra CASH. **By the way, if yo try to deceive people by posting the message with your name in the list and not sending the money to the rest of the people already on the list, you will NOT get as much. Someone I talked to, knew someone who did that and he only made about $150.00, and that's after seven or eight weeks! Then he send the 5 $1.00 bills, people added him to their lists, and in 4-5 weeks he had over $10k. this is the fairest and most honest way I have ever seen to share the wealth of the world without costing anything but our time!!!!!

:@.aol.Com

It would appear that your unit is faulty since I find the reception to
be quite good over the whole range. I am most impressed with its ability
to receive MW stations as well as its SW reception. You will find MW, SW,
and low VHF reception dramaticly improved by using a Radio Shack telescopic
scanner antenna.

Hi Bill,

> Is there a mod to kill the beep on the RS PRO-2035?

Take off top cover. On the top board near the front is a large connector block CN3. The right hand lead (with the front towards you) being pin 1 and coloured Brown (it is labled Pin 1)

Remove the brown lead...easier if you actually remove the complete connector block then you can quite easily lift out the brown lead - it will then go back in at a later date if you want.

Voila..no beep :-)

Hope that helps.

For what its worth....one can tune to the images up in the
11 Mhz range and save them...most of the cellular stuff is there,
if you find it interesting. This is on the PRO-2035. The image
rejection on the unit allows these upper harmonics of the
basic frequency to come through. I'm not sure why this stuff
is very interesting...after a few minutes, you tend to start scanning
elsewhere..pretty boring stuff in the long run!

Leonard...

P.S. However, if one must listen...the full coverage board
available from the UK is probably the way to go.

Read it yerself, but I donna see any regs against information to modify, just the manufacture and use of radio scanners moded to rcv cell.

DA
97-1440

July 10,
1997
(Revision of February 13, 1997
edition)

MANUFACTURING ILLEGAL SCANNERS
INCLUDES SCANNER MODIFICATION

It has come to our attention that entities are offering to modify scanning receivers
(scanners) in order to receive frequencies allocated to the Domestic Public Cellular
Radio Telecommunications Service. Such modifications are not permitted under
federal law and the Commission's rules.

Scanners are radio receivers that can automatically switch between four or more
frequencies anywhere in the frequency range of 30-960 MHz. On April 19,1993, the
Commission adopted a Report and Order in ET Docket 93-1 amending Parts 2 and 15
of the FCC Rules to prohibit the manufacture and importation of scanners capable of
receiving, or readily being altered to receive, frequencies allocated to the Cellular
Radio Service. The Commission adopted these rules to implement Section 302(d) of
the Communications Act of 1934, as amended (47 U.S.C. 302 (d)).

Scanning receivers are required by Section 15.101(a) of the FCC Rules to be
certificated by the Commission. Section 15.121 states that scanning receivers, and
frequency converters designed or marketed for use with scanning receivers, must be
incapable of operating (tuning), or incapable of readily being altered by the user to
operate, within the frequency bands allocated to the Domestic Public Cellular Radio

Telecommunications Service. Scanners that are capable of "readily being altered by the user" include, but are not limited to scanners to which the ability to receive cellular telephone frequencies can be added by: installing or clipping the leads of a simple component, such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device. Scanners and frequency converters for use with scanners, must also be incapable of converting digital cellular frequencies to analog voice audio.
Under Section 15.37(f), the manufacture or importation of scanning receivers, and frequency converters used with scanning receivers, that do not comply with Section 15.121 has been prohibited since April 26, 1994.

Manufacturing a scanner to receive cellular telephone frequencies is a violation of Section 302(d) of the Communications Act (47 U.S.C. 302(d)) and Sections 15.37(f) and 15.121 of the Rules (47 C.F.R. 15.37(f) and 15.121). The modification of scanners on a substantial scale to receive cellular frequencies will be considered to constitute manufacture of such equipment in violation of Section 302(d) of the Communications Act and FCC Rules. Entities engaged in such activity are cautioned to cease advertising and/or performing any such activity immediately.

The Commission will vigorously take enforcement action against parties found to violate Section 302(d) and these rules. Willful or repeated violations may be subject to a monetary forfeiture of not more than $11,000 for each violation or each day of a continuing violation, except that the amount assessed for any continuing violation shall not exceed a total of $82,500. See 47 U.S.C. 503(b), 47 C.F.R. 1.80(a). Further, pursuant to 47 U.S.C 510, such devices may be seized and forfeited to the United States. Continuing violations will be referred to the Department of Justice for possible criminal prosecution.

Use of scanners by individuals to intercept and divulge or use beneficially wireless telephone conversations (not just cellular conversations) without authorization is generally prohibited by Section 705(a) of the Act, 47 U.S.C. 605(a). Administrative forfeitures may be imposed for such violations. Violations of this provision may also be referred to the Department of Justice for possible criminal prosecution. In addition, Section 705(e)(4) of the Communications Act prohibits the manufacture, assembly, modification, import, export, sale or distribution of any scanner that is intended for an activity prohibited by Section 705(a). Violations of this provision will also be referred to the Department of Justice for possible criminal prosecution.

Other Federal and State statutes also apply in this area. For more information regarding the interception and divulgence of radio communications, see FCC FACT SHEET, "Interception and Divulgence of Radio Communications," dated January 1997, which can be obtained by calling the Public Service Division at 202-418-0200 or accessing it on the Commission Internet web site at http://www.fcc.gov/Consumer_Info.html/.

Additional questions concerning this notice may be addressed to Art Wall at 301-725-1585 (ext. 205), fax: (301) 344-2050, email: awall@fcc.gov.

Has anyone gotten trunker 3.0 to work? I have the origional trunker program working just fine but I get no data from trunker 3.0. I am using a data slicer on com1 just like the instructions say. Since 3.0 is based on the origional, I would think they should either both work or neither.

I used to have to use the invert option on trunker.exe. I didn't see any evidence of this working with 3.0. So I opened up my data slicer and swaped the + and - inputs. Now the origional trunker works without the invert option, but 3.0 still doesn't work!

I have tried everything I can think of. I have tried several different data channels that all decode with the origional program. Most of them even give a system ID.

Anyone got any ideas?

>please share your stories. and please, if you don't like this kind of
>thing, then don't bother with the lectures or whatever. this group is
>for everyone.

Okay, everyone, just for your info, by posting these stories, you are breaking a law. This is the Privacy Act, which, by definition, states that you can listen to your scanner/radio/whatever, but you may not divulge anything you hear to anyone WITHOUT the permission of the originator, nor may you use the info for personal gain/illelgal activity.

I'm not sure if something like this falls under that law, but for any Canadians here, I'd keep this in mind when posting. I'm also not sure about US laws on Privacy, but I'd bet they're pretty close to Canadian.

I'm not saying 'don't post', I'm just warning everyone that if any authorities read this, and find a real juicy one, they could attempt to press charges. And I don't think anyone wants that.

Now, to the stories!!!

>Thanks,
>GW

The crystal oscillator on the 800 MHz front end board could be
out of alignment so you're listening "off frequency."

The crystal is netted using CT203, a 40 pf trimmer capacitor.

BTW, the BC800XLT uses AFC (automatic frequency control), which
might interfere with realignment.

You apparently don't drive at night. Many times when you are on the roads after Midnight, you will get pulled over and asked where you are going so late at night. If you say you are coming home from work, they say "yeah right!" (sarcastically) Everytime I have ever gotten pulled over, I was doing nothing wrong, and recieved no tickets or warnings, just harrassment. And I do nothing to provoke it. I always turn on my interior lights, keep both hands on the steering wheel, don't interupt the officer when he is talking, and never dissagree with him/her. My car is not an old rusty beater, nor is it a red racy sportscar.

I have to admit, since I got my Ham Radio License Plates a few years ago (on the same car) I have not gotten pulled over since. I have no explanation for this, but am pleased to no longer be harrased. Other Friends and co-workers who drive at night still tell me some wild horror stories though, so I know it still goes on.

You are lucky to live in a nice town where this doesn't happen. But just watch the TV show "COPS" to see how cops REALLY behave! That show is frightening, especially since it is real! (also note how they behave more rudely during NIGHT sceans!)

Correct, my friend and I (who is a practicing attorney) would watch
COPS together sometimes. The conclusion was, the number of civil
rights violated routinely by these so called 'law enforcement' officers
is unbelievable.

And they know damn well they're on national television too. However
since the 'defendants' that are having their constitutional protections
trampled on can never afford a lawyer to contest their treatment, they
get away with it.

So think about it, on the federal level, the Jack Booted Thugs theory
is lent credibility by the behavior of the local JBT's. Unfortunately
the public seems to feel they can sacrifice a little bit of the
constitution on the altar of 'law and order' ... until it affects
them personally ...

Amateurs have a legitimate use for checking accuracy of the CTCSS
(PL) tones used in accessing 2 meter repeaters. Other licensed
Commercial Radio Telephone Operaters have uses in checking commercial
equipment, as well as those who legitimately repair telephone
gear.

This stuff never goes away. Laws are complex and must be read in context and in light of legislative intent; this is why people go to law school. In New York, the Vehicle and Traffic Law prohibits any device which allows the user to listen in on frequencies used by the police. The "apparent" exemption in the law applies to licensed hams using ham gear on frequencies EXCLUSIVELY dedicated to ham bands. The intent of the legislature apparently was to address concerns of hams that the police would interfere with their use of ham gear on ham frequencies; it never was intended to allow hams any privileges other scanner buffs would not have. Read New York's statute slowly and carefully and this will be evident. Now, having said that, there is some argument to be made that the New York law cannot prohibit possession of modern ham gear with wide band receive capabilities if the gear is FCC approved, because to allow local law to do so would violate a principle of federal law known as "preemption". Preemption is an expression of congressional intent that it (the federal legislature) regulates or legislates in a given area to the exclusion of any state or local regulation, and communications seems to qualify. In other words, the FCC, a federal agency with jurisdiction to act, says the gear is OK for licensed hams, and state and local laws cannot impact in that area. This is DIFFERENT from saying that state and local laws cannot prohibit SCANNERS, or that those laws cannot prohibit hams from LISTENING to police frequencies on wide band ham gear (rather than merely possessing the gear, a preemption problem). Complicated? Sure; the law often is. All of this is my personal opinion, of course, and IMHO, in New York its NO SCANNERS IN CARS and NO LISTENING ON PD FREQS ON YOUR HAM GEAR WHILE IN YOUR CAR.

As long as your not listening while in your car!
Scanner laws are for mobile use of scanners. What you do in your house is
your business.. Except listening to cellular or cordless phones, that is
illegal everywhere.
If you listen to them, just don't tell anybody because the only way anybody
will know what your listening to is if you open your mouth and tell them.

Looking for answers to two questions on the above scanner I recently acquired. It is in beautiful condition and works well. First, there is a slight hum when a frequency is activated and there is a transmission coming through the speaker. The hum is most noticed in the UHF band and significantly less in the VHF-low band. It does this with headphones and also when an external speaker is used. Does anyone familiar with these know if that was something that was germane in the design of the unit or may I be looking at a service related problem? (I'm not knowledgable of these things except for the basics of doing a simple mod by following printed instructions)
Secondly, being this is a nice heavy wood cabinet, it is really attractive. Anyone know the going rate for such a unit on the open market? (I presently don't look to part with it but would be nice to know if I bought it right or paid too much!)
Thanks for the assistance & comments.
Regards,
Ray Miller N2NJK

>the purpose of buing the second battery.

The second pack can be charged 'stand-alone'. The battery need not
be attatched to the radio while re-charging unless you want to listen
to the scanner at the same time.

MetroWest has a 2500/3000 replacement battery pack that uses Nickel
Metal Hydride (?) batteries. Up to 12 hours of monitoring time can be
had on a single charge. And the same adapter that is used to charge
ni-cads can be used to charge the NMH battery.

The price is steep ($65) but well worth it. Their # is 708-354-2125
for questions and 800-657-1475 for orders. They are out of LaGrange
Park in Illinois.

There are 2 versions of this scanner. One has a dimmer switch and the newer models have a switch that turns the light on and off. (The designator 'A' is after the model number for newer models.)

For older models, R505 dims the EL and is 47 ohms Switch is pushed in. . R504 is 150 ohms and the dimmer switch is out.

For newer models, only R504 is used and is a compromise between the above...the value is 82 ohms. There is no R505 rendering the light off.

Check the board that the EL wires to and verify the resistors, especially if you bought the 2006 used.

Remember that there are 2 versions of this radio. The later units
did not have a dimmer switch to prolong the life of the EL.

Muzak still uses the SCA portion of WXRT radio in Chciago. WXRT
uses offsets of 67khz & 92khz. The 92khz offset is more 'lite rock'
than the typical Muzak service found on 67khz.

Many educational communication books show the decoder circuit that
can be built and installed to any FM receiver to listen to these
services.

While it may be considered a theft of service to listen to these
(these are pay services), several hobbyists have written to the
stations where these SCA signals originate and have been given
permission to listen as long as it is for personal use.

Actually he is quite correct about that flip phone mod. It will allow
you to listen to cell calls. Unfortunately it will not scan channels,
you can only load one channel in at a time which can be tedious.

Also on Motorola bag phones, if it has a 15 pin connector, you just short the two pins on the handsfree mic connector together, and if it has a 25 pin connector, you ground pin 21.

I have the Touch K500, the deluxe version of the K100. As is
common with early synthesized scanners, The K500 suffers from
slight synthesizer induced noise, especially on the higher
frequencies.

>Secondly, being this is a nice heavy wood cabinet, it is really
>attractive. Anyone know the going rate for such a unit on the open
>market?...

The K500 cabinet is particle board covered with an attractive
walnut veneer. Unlike some older shortwave receivers, I don't
know of any old scanner models which are worth a lot of money.

Given that particulars such as date, time, place, agencies involved,
call-signs and the like are conspicuously ABSENT..., then yes. It does
sound farfetched, but let's play along....

> One evening my friend was scanning the 902-928 MHz Ham band with a popular
> STANDARD brand amateur radio, looking activity while doing some work on
> his computer. The radio stopped on a station which was later identified to
> be a cellular phone call.

Then he was NOT scanning a HAM band, was he. We don't use cell phone
frequencies, they don't use ours. If he did, in fact, receive a cell
phone transmission not intended for him, he broke the law. Period.

I have that radio and I like it a lot. Nice solid reception and
features.
After using a Pro-34 the scan speed of the BC3000 seems blazingly fast.
It's Amazing how much action you miss with a low scan speed.

I've seen it for $339 new on the web.

Date: 1997-07-12 00:00:00 UTC
From: "Gary W. Skett" <gskett@smartt.com>
Message-ID: <01bc8f0a$0214e520$991e66cf@gskett>
Source record: 191841

Hello;
Does anyone know the two or three button power on "reset" for the BC 200XLT scanner? I had it several years ago, but cannot find my notes.

This combination of buttons while depressed when you turn the scanner on will clear all your channels to zero.

There is also several other power-on combinations that program in some "test" frequencies and other options.

If you know, please e-mail to gskett@smartt.com

Thank you.

Hello JM,

There are three companies manufacturing these items. Two are very poor performance and not much more than toys. One is excellent, rugged and works very well.

I have owned all three.

The good one is manufactured by Atlantic Electronics and sold only by CSE Associates at http://www.cse-assoc.com look for part # SM-1071 or something similar, under their Atlantic Electronics section.

Same items also work on other ICOM receivers.

Hope this helps ..... Steve

This scanner is too good for someone who doesn't know what he's buying but is perectly willing to ask complete strangers to do his thinking for him. Why don't you look at the features and specs and decide what you're going to do with the scanner? If you get that far, and actually make an effort to learn a bit about what you seem to be willing to spend $400 for, maybe you'll get the answer on your own.

It's worth at least $150 and maybe upwards of $200 to the right buyer.

I wouldn't sell it unless you need the money or something. It's market value won't fall since it is a full 800mhz coverage scanner and you can't buy them anymore in the US retail market.

Let's not be so hasty.....

Cheap scanners have lousey image rejection. It IS VERY POSSIBLE that a
scanner tuned to a HAM freq will inadvertantly receive a cell phone Tx.

I don't know if they are a dealer... they are of other brands.. if not
perhaps they could give you one in your area. Try Lentini's in
Newington.

Well I know there is a tone board that can be bought & installed, but I
don't think this model is capable of being modified for cellular. I have
one myself, and kinda like it the way it is.

I will be going to the Philly area and the Eastern Shore in August for two weeks and had hoped to carry my scanner with me. In looking at the Scannermaster Pocket Guide for the Philly area, I read the Philadelphia anti-scanner law, which seems to make it illegal even to possess a scanner outside your own home. What I wondered about is whether they would be liable to cause trouble at the airport if they see it in your carry-on luggage. If not, I could carry it and just be certain not to use it in any public area. I would really hate to be kept from carrying it on my trip because of that stupid law.

[snipped a bunch]

The camel's nose is already under the tent. The creepiest part is that
a law can prohibit the reception of ANY sort of radio transmissions.
Of course this is de facto prohibition by controlling the manufacture
of receivers. The effects are the same.

It would make more sense to proscribe what a listener can do with
information or knowledge gained in this manner, as is the case now
with law enforcement and other emergency radio transmissions.

Unfortunately, 99.9% of the time, you will not be able to receive the
signals from Pathfinder. You will have to have a large antenna +.

Yes, you are able to receive the signals from NASA if you are lucky...

There are some rumors for the Pathfinder's frequency.

Here are some info that you also see on Usenet:

1. 1.9 GHz rannge
2. 12W 8427.22222 MHz (I doubt...)
3. 12W 8429.938271 MHz (I doubt...)
4. 1W 459.7 from Rover
5. 70m and 12m band
6. http://people.qualcomm.com/karn/

GOOD LUCK

From: chip <cfrigon@slip.net>
Message-ID: <33C97F70.2C3F@slip.net>
Source record: 191706
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Hi all,

I recently purchased the RS Pro-60 and quite like it in spite of its appetite for batteries. The problem I have with it is the "battery saving cicuit" that puts the scanner in standby mode after 5 seconds of no signal, then checks for a signal for half a second every second. I have been missing things (like call signs) when I'm monitoring SFO control tower or local PD during situations. Quite frustrating. Is there any way to turn this feature off? I can find nothing in the manual that came with the scanner.

Also, does anyone know of any mods for the Pro-23? (scan speed, keypad tricks, I'm not interested in cell...)

Thanks in advance,
--

There ARE times when you MAY legally listen to Cellular Phone transmissions, so don't say "he broke the law. Period."

He may have been investigating local interference, from or to, the Cellular frequncies or nearby Ham frequencies, or nearby public service frequencies. In which case, you ARE LEGALLY ALLOWED to listen to the Cellular Frequencies long enough to find the problem!

Unfortunatly, the arresting officer was probably as knowledgable of the laws as you are, and that is why so many cases are dissmissed by judges.

Cellular Phone Technicians MUST listen to Cellular Frequencies, or they would not know if the phones are working properly. There are MANY cases in which these frequencies MUST be listened to, and that is why the LAW allows for this. Trying to prove if someone was listening to them Legally, or illegally can NOT be done if the listener is SMART and PREPARED! Remember, the legal system is a great big GAME, and the person with the highest paid lawyer USUALLY in most cases wins.

You most certainly can talk about, and REPORT any interference out of
band caused by the Cellular System, and MAY LISTEN to the cellular band
directly to find the cause of the interference and it's source.

Here's the layout of what the extra numbers mean on a Type II system:
0 Group 1 Fleetwide/MultiGroup Announcement ATG (All Talk Group,
kind of like Type I fleetwide)
2 Emergency (activated emergency banner)
3 Patch (several TGs patched together, bidirectional)
4 Emergency Patch
5 Emergency MultiGroup
7 Multi-select (dispatcher simulcast)
8 DVP/DES (digital encryption)

They are on a SHARED basis, with priority given to the LICENSED Hams.
All consumer devices are classified under PART 15 RULES which state that
they MUST accept interference to the unit.

If you are recieving interference to your TV from your neighbors CB or
Ham radio (and the CB or Ham radio is operating legally) and you
complain to the FCC, guess what they will tell you? That it is the
fault of YOUR TV!

Before you try and argue this, call the FCC and ASK THEM! or ask for a
phamplet on this issue from the ARRL!

Anyone who thinks that written rights will protect you, should watch the
TV show "COPS" on the Fox network! The founders of this country would
be sick to thier stomachs if they watched that show! The Libertarian
Party had a cool poster that had a picture of the "Bill of Rights" on it

with big read letters across it that said: "VOID WHERE PROHIBITED BY LAW!" As far as I am concerned, the Bill of Rights became void as soon as the right to own and bear arms was infringed. Why should anyone believe that the OTHER rights won't be taken away TOO?!

Why do you make such a statement when you obviously have not read the law?! If I find a copy of it I will post it, but meanwhile you try and find it as well. I do not post what I BELIEVE... ONLY what I am 100% sure of!! NOT by hearing information second hand, or reading an article, or watching a tabloid news program, but by requesting a copy of the law and reading it! It is most likely here on the internet somewhere. But I am curious as to how you can just come on here and accuse me of being wrong when you SO OBVIOUSLY have not even READ the law we are disscussing???

WHY?!

I have also been along on "ride alongs" and I agree with everything you just said. They do have a scary job, and always assume you could pull a gun on them. That is why I (at night) put all of my interior lights on and keep both hands in view on the top of the steering wheel as the officer approches, to put him a little more at ease. Most appreciate this, but a few bad eggs STILL give me an attitude. I can't win.

1159. Antenna for Pro-26

The Volusia County ARES/RACES Page is back up and operational!

The New Address is:
http://www.netpass.com/varecs

This page was down for awhile at an older address. The old address is not operational. If you currently have a link to VARECS at the former address (dbeach.com) please change it to the above (netpass.com). If you have taken down the link please put the new one up at your earliest convience.

Some new features include:
+ Frames
+ Image Maps
+ Music
+ Updated Links
+ The Amateur Radio Ring
+ And Many More Great Improvements

I invite everyone to check out our new page. Please spread this message to any newsgroups, mailing lists, packet BBS or any other meathod you see fit. If you have a or know of any ham radio pages, newsgroups, or any other information, that isn't on our link list please send them to kf4bia@n-jcenter.com. Personal pages are welcome along with skywarn, ares, races, civil defence, and any other ham radio related pages.

Thanks,

Hello!

I've been monitoring these freqs all day(7/13/97) from the Seacoast of New Hampshire.
Have heard them from middle of June off and on.

42.58, 42.64, 42.42, 42.38, 42.60, 42.50, 42.14, 42.12, 42.06, 42.16, 39.46

All confirmed from Scan-l as Missouri, Michigan, Illinois, Kansas, Maine, and others. Try these from the north east and get the 'local' scene from these states.

:)

They are, after all, a cross section of society. And, in fact, a
cross section of generally more agressive society. An officer
afraid of a perp is a problem waiting to happen.

There will always be bad cops, but they are the exception, not the
rule.

So Long,

I have an old Bearcat 100 scanner that has a blank display. I understand that this is a problem common on many of the old Bearcats, particularly the 100. I'd like to hear from anyone who has successfully performed this repair, as I have the following questions about it:

Should I suspect a failed capacitor?
If so, which one did you find had failed?
Should I suspect only a failed LCD?
If so, where can I get a replacement?

Thanks in advance for any suggestions!
Patrick

What difference does THAT make? Who cares whether he's not in prison NOW.
The fact is that he was arrested for something he should not have been
arrested for.

> > After 2 months of hell; after having my name printed all over the local
> > paper; after paying out attorney fees; the case was thrown out--AFTER all
> > of this! So what if this is United States of America. DO YOU BELIEVE

Again, it makes absolutely no difference why he was pulled over. What matters
is why he was ARRESTED for carrying a scanner, when it was legal for him to do
so being a ham operator. Just as well, bringing the issue of the size of his
town into play is totally immaterial. He should be suing the agency and
officer which arrested him to recover all of the damages. This case is a
clear example of misuse of authority and ignorance on behalf of the department
which didn't immediately kick the arresting officer in the ass for what he did
and let the man go immediately. If you don't see anything wrong with what
happened to him (should all of this be true, of course), you are either one of
the bastards who WORK at that agency, or are a total butterbrained nincompoop.

I am looking for a program I believe was called 'chart.exe'. It is used for
printing a page of frequencies to use as a check-off when scanning. The
syntax was 'chart freq1 freq2'. An example, 'chart 460 461' would produce a
sheet with all frequencies between 460 and 461.

If anyone has seen this or another similar product, please drop me a line!

I use Probe without any difficulty under Win95. You must install the program under DOS, and it will modify the config.sys file (it adds two lines: files=40 and buffers=8), but once that's done, you can run it from Win95. I made a shortcut to Probe, and put it on my desktop. I changed the icon from the typical DOS icon to a better looking one that came with Win95 (right click on the icon, go to "properties and change icon and the settings for the window size while you're at it). When I want to run Probe, I double click the icon and voila, I'm scanning.

On this subject, does anyone know where I can get a nice looking icon of a scanner or something related to scanning that I can use for a desktop icon? Right now, I'm using a little picture of a satellite dish, which was the best pick of a poor lot.

>Jeff

It starts out and hears the Moto DVP as "white noise" for 1/4-1/2 second,
then "unlocks" (some sort of unlistenable signal detect?), then
locks again, etc.. sort of a thumping. Makes it hard to hit it
with the LO button.. Have to DLY first to LO a scrambled channel.

The "8" bit appears to be the scramble bit on the channel number.
TT decimal channels have 4 bits of extra info on the right
end of the chan addr. A channel being scrambled will appear as
CHAN+8 on the TT. (Type II)

I once saw our local (Laf IN, Tippecanoe county), ambulance dispatch
(normal CHAN 48), come up at "55" instead. This is 48 + 7
(all the xtra bits on except for the scramble bit) They may have
joined talk groups, etc?

>place?
>
>

It's getting deep here.....I also had scanner problems in michigan.
However, they only confiscated the radio, and wrote me an appearance
ticket. After two trips to court, (the judge appologized for having to
come back again, however only the prosecuting attorney could dismiss
charges), I had the case dismissed, and retrieved my scanner. Now, this
was back in the mid 80's...84 I think, and I was being an ass sticking my
nose in where it didn't belong.
I wonder just what you were doing in order to raise all this hell??
And, I believe the law is written that you may have a amateur rig capable
of reception of police, if thats the way it was made, But, you may not
posess a scanner without permission from the state police.

Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.swap

I have a BC-200XLT for trade. It is in near-mint condition & works perfectly. Has complete 800mhz coverage w/o any gaps. It comes with original box, manual, antenna, leather carry case. I am looking for several different scanners at present, here is a few of them:
Regency MX-7000
Uniden BC-760
Realistic Pro-2026
Realistic Pro-2004
Realistic Pro-2005
Realistic Pro-39
Relaistic Pro-43
Realistic Pro46
In the above listing, I need full coverage 800mhz w/o any gaps. I am only interested in swapping within the United States. Any interested parties, please e-mail me with complete details on your unit. Thanks for reading my post.
Regards,
Ray Miller N2NJK

Hi, I just moved to Shiawassee County, Michigan, and am looking for frequencies for Shiwassee and Livingston County Law Enforcement. Also, I understand the Michigan State Police are moving to 800 mhz? I am not finding their transmissions anywhere. Have they went to a scrambled system? I also need freqs for Fowlerville, Owosso, Perry, and surrounding areas.

Tnx,
Rich

Hello fellow scanner buffs,

I'm looking into buying the PRO-29 scanner, and I need to know how good of a scanner it is. It is currently on sale for $129.95, and the full catalog price is about $219.99. This scanner has Air Band, all the traditional VHF/UHF coverage, and 800 MHz up to 956 MHz. I'm currently using the old Bearcat 100 scanner which has 16 scannels and was made in 1983, and I'm obviosly looking to up-grade. The PRO-29 has 60 channels. If anyone knows anything about this radio, please e-mail me.

Thanks,
EugeneD@aol.com

Do NOT carry a "scanner"... carry a "ham radio" that is capable of
scanning. Also, carry a copy of the quotes of the federal law (or
state law ???) that allows you to have a "ham radio" in your vehicle.

Make sure you have your ham radio station license also. If you don't,
the police may become suspicious of you.

IN BC, Canada, we are allowed to carry a scanner...
I was carrying a handheld ham radio while I was riding the bicycle.
The lady officer stopped me if I carried a scanner or not....
(carrying a scanner while you are out... is saying to cops that you
are a thief (? just an example to illustrate) or someone who wants
to know where the cops are at all the time... or something...
remember... the cops can assume anything they want !! They can
assume that the ham radio is a scanner !! so watch out) I showed
my handheld + a copy of station license + ID and I got out from the
situation, but the officer could take me into the police custodity for
the suspicion....

I have never had a problem of this type. The one time I got pulled
over without good cause was at 02:25. I was not paying attention
to the road and crossed the center line, the officer probably grinned,
rubbed his hands together and thought "oh goody, another deuce".

He was cautious, but reasonably courteous.

After a brief interveiw he decided I was not under the influence,
admonished me to pay more attention to my driving, and let me go.

By the way, I regularly (six, eight times a month?) am required
to go into work in the middle of the night. The drive is about
a 70 mile round trip. The car has six antennas on it (HF, 11M, 6M,
2M, 70 cm, and 33 cm) and no Ham tags.

> I have to admit, since I got my Ham Radio License Plates a few years ago

> just watch the TV show "COPS" to see how cops REALLY behave! That show
> is frightening, especially since it is real! (also note how they behave
> more rudely during NIGHT sceans!)

The fact of the matter is this. The two most deadly scenarios for
a patrol officer are nighttime traffic stops and domestic disputes.

On a nightime stop your attention level MUST be very high. In the shadowy interior of a car (even with the interior lights on), small movements are hard to detect and objects are easy to hide. This is one reason officers hate tinted windows. Even lightly tinted windows make the job of observation that much more diffecult. If you have ever been stopped at night you will notice that the officer has his brights on and any spots are right in your back window. This is not a "Gustapo" tactic, but instead a "survival" tactic.

Also remember that, although you may be a "good" person, that same officer spends more than 90 percent of his time dealling with the less than 10 percent of the population who are "scumbags". The larger the town, the more likely he (or she) will encounter dangerous scumbags. And the officers number one goal is to go home at the end of the shift, in order to do that he must be alive.

And no, I am not a JBT or a police officer of any type. But I have taken a couple of "ride-alongs" that opened my eyes. The police department in your town probably has a ride-along program, look into it, it may give you a new veiw on those officers you see driving around town. Also, a college in your area may have "Administration of Justice" classes, these will let you know what an officers responsibilities are.

So Long,

> and let the man go immediately. If you don't see anything wrong with what
> happened to him (should all of this be true, of course), you are either one of
> the bastards who WORK at that agency, or are a total butterbrained nincompoop.

Yea, should all of this be true. It has enough holes in it to make swiss cheese look solid yet you seem to take every word as the gospel. Then you have the gall to call people bastards or total butterbrained nincompoops. Well butterbrain, step on up, you win you got duped.

Paul Racine is the original poster of this thread, you know the guy who started the post "Recently a friend of mine was arrested for listening to our HAM band 902-928 MHz." Now we have Willy who " was arrested on Christmas Eve, 1988 for possession of a scanner in the vehicle, AFTER I presented my license" The problem is Willy and Paul Racine are the same person!!!!!!!!!!
So tell me again who is a butterbrained nincompoop? It was all bogus and you are sitting there defending it. Jeez!

My local fire dept. uses the freq. 33.940. I've been able to hear the fire tones clearly, and the dispatcher. But I can't hear the fire trucks at all (even when they in a relatively close range). This is an old mobile phone antenna however. I have a CB antenna somewhere around here, would that be better for recieving this low freq? Should I just replace the mobile phone antenna, or use a splitter and have both antennas. (I don't quite have any money right now so I can't buy anything new).

Thanks for your help,
Aristotle

Message-ID: <19970713200700.QAA03358@ladder02.news.aol.com>
Source record: 191786

<<This stuff never goes away. Laws are complex and must be read in
context
and in light of legislative intent; this is why people go to law school.
In New York, the Vehicle and Traffic Law prohibits any device which allows
the user to listen in on frequencies used by the police. The "apparent"
exemption in the law applies to licensed hams using ham gear on
frequencies EXCLUSIVELY dedicated to ham bands. The intent of the
legislature apparently was to address concerns of hams that the police
would interfere with their use of ham gear on ham frequencies; it never
was intended to allow hams any privileges other scanner buffs would not
have. Read New York's statute slowly and carefully and this will be
evident. Now, having said that, there is some argument to be made that
the New York law cannot prohibit possession of modern ham gear with wide
band receive capabilities if the gear is FCC approved, because to allow
local law to do so would violate a principle of federal law known as
"preemption". Preemption is an expression of congressional intent that it
(the federal legislature) regulates or legislates in a given area to the
exclusion of any state or local regulation, and communications seems to
qualify. In other words, the FCC, a federal agency with jurisdiction to
act, says the gear is OK for licensed hams, and state and local laws
cannot impact in that area. This is DIFFERENT from saying that state and
local laws cannot prohibit SCANNERS, or that those laws cannot prohibit
hams from LISTENING to police frequencies on wide band ham gear (rather
than merely possessing the gear, a preemption problem). Complicated?
Sure; the law often is. All of this is my personal opinion, of course,
and IMHO, in New York its NO SCANNERS IN CARS and NO LISTENING ON PD FREQS
ON YOUR HAM GEAR WHILE IN YOUR CAR.
>>

Well stated. Its nice to hear a rational statement of the law for a
change rather than the ridiculous and easily disproven blatherings of
those with 8th grade educations who pretend to be Justices of the United
States Supreme Court. The only trustworthy means of understanding one's
right and responsibilities with respect to mobile scanner usage in a
particular state is to read the appropriate statute or code provision as
well as any federal statutes or regs which may supercede state law by
virtue of the supremecy clause. And even then, more than one reasonable
interpretation of the law may exist.
I have spoken. Gather ye near and give thanks.

1217. RS232 controlled FM receiver

Hello,

I am looking for a FM receiver/scanner that is controlled via standard RS232.
I would like to receive AM/FM comercial broadcasts by programming the receiver to
'listen' to diffrent things at diffrent times, like a VCR.

I need a RS232 controlled radio, not some internal PC card.

I posted this article in the scanner newsgroup because I think some scanners
have some sort of conputer controlled interface and/or programm functions....

Thank you in advance!
Andrei

1224. ARRESTED possession of HAM RADIO

Newsgroup: rec.radio.scanner
Date: 1997-07-13 00:00:00 UTC
From: Willy <racine@ibm.net>
Message-ID: <01bc8f21$f8f304a0$5fca2581@willy>
Source record: 191967

In response to the posting, "ARRESTED for 902 MHz"---
Yes, this really did happen....the state is Michigan; the county is Marquette, in the USA! I can get a case number for you if you would like, but please email me directly....I will even give you names...and if permitted to do so, I will give you the email address of the actual person this happened to so you can talk to him yourself....

Like I said, this is VERY difficult to believe, but if you can't believe and want specifics, contact me, and you will see for yourself; then YOU will be the doubted.

The law in the state of Michigan states that an amateur radio operator is allowed to carry a police scanner in the vehicle, lagally (MCL 750,508...look it up). Well, I was arrested on Christmas Eve, 1988 for possession of a scanner in the vehicle, AFTER I presented my license (to a federal deputy, of course, since it is a federally issued license) and the law was read to me. I was handcuffed and escorted to the police vehicle, after being searched! I was then BOOKED! Did the law protect ME? NO!! After 2 months of hell; after having my name printed all over the local paper; after paying out attorney fees; the case was thrown out--AFTER all of this! So what if this is United States of America. DO YOU BELIEVE THIS CASE? DO YOU WANT CASE NUMBERS? I WILL SUPPLY THEM IF YOU CAN'T BELIEVE!

It really pisses me off when people, who NEVER had to deal with such inconveniences, can get on the "net" and proclaim, "this is America, and we are protected by law and we have rights, and bla bla bla." Well, if you want to believe this, then test the system. Then, after spending a night in jail (just ONE night in jail is all it takes, and you will NOT get that night back), maybe you will start to understand that it ISN'T our right, it's a privilidge, and that isn't an absolute! TEST THE SYSTEM and let me know what happens, then write about your experience and POST IT here, and see if anyone BELIEVES you.

Ha ha, that can't happen--this is AMERICA and we have rights!

Sincerely
--WILLY in Michigan

For Sale Or Trade (looking for scanner)
Realistic HTX-202 2mtr HT in very nice condition, Comes with box, manual, nicad pak, strap, speaker mic, charger, manual. I will sell for reasonable offer, but I really prefer to trade for a scanner. Here are a few of the units that I am presently looking for:
Regency MX-7000
Uniden BC-760
Uniden BC-2500
Realistic 2004
Realistic 2026
Realistic Pro-39
Realistic Pro-43
Realistic Pro-46
Any of the above must be in likewise very good condition as well as be full 800mhz coverage (no gaps). Only interested in trades within the U.S.A. Interested parties please respond via e-mail. Thanks for reading my post.
Regards,
Ray Miller N2NJK

Tekbir,

I took a General Motors AM antenna, the kind that screws on the post on the fender of the car and tapped the hole out to the correct thread pattern for the top post of the RS Discone antenna. There are no mods at all to the discone for that addition

Mark.

they don't make a tribander that TRANSMITS on 902-928...but nobody said
anything about transmitting.....they do make a tribander that does receive
this range, however.

1251. FS: PRO-24 800mhz Handheld - $65 shipped

Newsgroup: rec.radio.scanner
Date: 1997-07-14 00:00:00 UTC
From: rubbertow@aol.com
Message-ID: <19970714024401.WAA01592@ladder01.news.aol.com>
Source record: 191495

I am selling my Radio Shack PRO-24 800mhz scanner for $75
includingshipping. This scanner picks up all the lower cordless phones,
and eventhe newer 900mhz phones that are supposed to be more secure. But
ofcourse, listening to them would technically be against the law. It has
16channels where you can save your favorite frequencies, and you can
alsodirect enter them to listen. It also has the National Weather
Servicefrequencies at the touch of a button so you can get the latest
forecast.

It has a power jack, a charging jack, and an earphone jack. It doesn't
have a belt clip, but it has a place for one. It has the nice short
"rubber duck" style antenna, which is very rugged. This scanner also
comes with the original instruction manual. This scanner is in GREAT
condition... no scuffs or scratches. Works perfectly.

Radio Shack Pro-24 (Model #20-503) Frequency
Coverage:VHF-Lo.....29-50 MHz (in 5 kHz
steps)
Amateur Radio.....50-54 MHz (in 5 kHz
steps)Government.....137-144 MHz (in 5 kHz
steps)
Amateur Radio.....144-148 MHz (in 5 kHz
steps)VHF-Hi.....148-174 MHz (in 5 kHz
steps)
Amateur Radio/Government.....406-450 MHz (in 12.5 kHz steps)
UHF Standard.....450-470 MHz (in 12.5 kHz steps)
UHF "T".....470-512 MHz (in 12.5 kHz steps)
UHF Public Service..... 806.0000-823.9375 MHz (in 12.5 kHz steps)
851.0000-868.9375 MHz (in 12.5 kHz steps)
896.1125-956 MHz (in 12.5 kHz steps)

If you would like to hear a WAV audio file captured from this scanner,
please go to this link... http://members.aol.com/rubbertow/scanner.wav

$65 (firm) including shipping in the US. Thanks, Rubbertow

Message-ID: <19970714040401.AAA06891@ladder01.news.aol.com>
Source record: 191497

For further clarification on Florida's mobile scanning law, the Attorney General's Office has ruled that for a scanner to be considered "installed" it must be connected to BOTH the vehicle's power system AND an external antenna. A handheld scanner in a car is just fine.

"T" Bear from Teaberry (mobile)
40 channel.
FEATURES::::
Gold face trim & knobs.
L.E.D. channel readout.
Analog S/RF meter.
Tone control, NB switch, Brite/Dim switch, PA/CB switch.
Radio uses an 858 PLL chip, so it can be easily modified
for extra channels.
Cosmetics of the radio (on a scale of 1-10) are a strong 7 1/2.
Radio is in excellent operating order.
Has been cleaned & tuned.
This is an over-all really nice radio.
Mic., power cord, mounting hardware with bracket are included.
A great buy at $55.00 (includes shipping in the USA)
Interested??? contact PANTH18251@aol.com
Thank you.....

The list of CB Shops is finally available for your shopping &
repair needs
all over the nation.
CB Shops listed from East to West and North to South are available
and
ready to address your needs. Some carry hard to find equipment, and

some carry wholesale parts & equipment.
Whether it's a brand new radio or an old tube type amplifier, your
chances
of finding what you need are much greater and faster with this
brochure.
Use this brochure to shop & compare to enable you to buy at the
best
prices, or to compare what ever prices on labor, etc.
Will save you time and hassles of trying to search the information
by
other means and in the end will more than likely save you some
green$$$$$.
This brochure is LOADED WITH OVER 60 names, addresses,
and telephone # 's of
different shops, shacks, and even, shops on wheels.

This brochure will pay for itself with the time it will save you
in searching
for that one shop that can accommodate your specific needs.
You won't want to miss out on the next great deal !!
Here's how to get your copy of this, fast selling ,
brochure..........

Send $2.00 cash, .32cent stamp , and of course, your snail mail
address
to.......
(please include your e-mail address)
TEAMWIN 01
P.O. Box 0583
Loveland, CO. 80539-0583

Thank you and 73's from Colorado..............

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1996 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14 of MC3357 (IC1)

but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

Service manuals for most Radio Shack scanners may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267.

Parts lists for recent models are available on line at: http://support.tandy.com/support_electronics/2849.html. Parts may be ordered through Tandy National Parts, telephone (800)442-2425 or (817)870-5600, or through your local Radio Shack store

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in

plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to

cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.

FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies. It's clear from the discussions posted on the Internet that Americans still listen to whatever they want in the privacy of their own homes despite the laws.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a

diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046,

allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The new RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000

channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are

unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer

than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend | reliable reception to 50 miles or more, depending on | terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but

carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (704)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove.net

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/ham-radio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (704)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain selected business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 704-837-9200, www.grove.net) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national

scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

The Scanner Club is the name of a bimonthly magazine published by Les Mattson. It is a successor to the Northeast Scanning News and is the official publication of The Scanner Club, a not-for-profit club organization. TSC's main strength is local frequency information, including CTCSS codes. Sample issues are $4 each. A yearly membership costs $24.95 and includes 6 issues. Write to The Scanner Club, PO Box 62, Gibbstown, NJ 08027 for more information.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities,

highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Peter Laws administers an electronic mail list read by over 700 hobbyists devoted to scanners and scanning. It's called "scan-l" and for more information, read:

http://www.wildstar.net/~plaws/scan/scan-l.txt

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

All Ohio Scanner Club

- 2 -

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 annual fee for the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (630)852-1292.

All meetings are held on Saturdays at locations announced in advance. Meetings are usually held at:

- the Destiny Restaurant, on Rand Road, in Des Plaines,

- Philly's in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook,

- The Great Escape, on Irving Park Road, Schiller Park

and at other restaurants.

HI Chip

This circuit only comes to play when your parked on a single channel.

One way to bypass it is to lockout the other channels in the bank and scan the single channel.
Not a slick solution but it will resolve your concern.

Sure wish the battery saver circuit would come to play only when it was running on the battery

I've been doing business with AES for the last couple years, and have had no problems at all. They almost always ship same day, and I usually have the product by the next day. I usually order from AES Wickliffe(OH). Outside a rare mistake (which happens with *ANY* human being based business!) they seem pretty good.

I actually visited their store, and there wasn't much out on the floor, and everything was kind of dusty. Their sales people always seem in a hurry to get me off the phone.

Overall, I still would recommend them to most people.

Keith

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner. The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.]

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores for under $13. Police Call Plus is

basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's 1992 book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It is certainly not complete, nor 100% accurate, but is a good

book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $100 instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a

frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are

really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using

call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. You can also get Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectrom SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

>because of that stupid law.

The only thing the State of Pennsylvania can regulate is the use of
this thing in your car. They can't tell you not to own one, they
can't tell you not to pack one, nor can they confiscate a scanner
which is packed in your luggage. Don't worry.

The last few years have been brutal for low-band skip in New-England.
I commonly hear the CHP in the 42Mhz range in the Boston area. Just
yesterday I was listening to a SIMPLEX transmission between a cruiser
and the station from Charlotte, NC! They were in the 39Mhz band.

It's neat to listen to, but it becomes a pain in the ass real quick
when you want to listen to your local stuff.

Like the quality of most Ramsey kits, they're pretty marginal. I did
build one out of curiosity, but frankly I was disappointed. The
"fiddle factor" is pretty high. The result is poor quality audio. I
don't recommend them.

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner. The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by Electra Company, a division of Masco Corp of Indiana. In the mid 1980s, Uniden, a Japanese company, bought out the Bearcat scanner line and Uniden's first Bearcat scanner was the BC800XLT model.

Most of the models discussed in this article are base/mobile units made by Electra during the 1970s and 1980s although some of the capacitor failures occur in the Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing date code on the rear of the cabinet. The code is comprised of a single character (C = Cumberland, Indiana, P = Puerto Rico), followed by four digits denoting year and week the radio was built. For example, "P8422" denotes the radio was made in the Puerto Rico factory during the 22nd week of 1984.

One way to roughly estimate a radio's age is to examine the 4 digit date codes often stamped on the integrated circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553.

Some schematic diagrams may be obtained from Uniden/Bearcat's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267.

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal

chassis. The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal

required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the

two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder
connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier
activated relay inside the BC890XLT wore out. Andy found
the identical relay sold at Radio Shack (part #275-232) and
says the BC9000XLT uses the same relay, too.

1289. XPLORER/SCOUT CASES

Newsgroup: rec.radio.scanner
Date: 1997-07-14 00:00:00 UTC
From: "James F. Boehner, MD" <jboehner@scescape.net>
Message-ID: <33CA513C.3A73@scescape.net>
Source record: 191533
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.amateur.equipment

To All!

I posted a message about a week or so ago about a local couple who have started a business making custom cases for radio equipment. I loaned them my XPLORER and SCOUT to allow them to produce their products. I just received my order, and I am VERY pleased.

Both cases are made out of ballistic nylon (the same stuff that the bulletproof vests are made of!), and have a sturdy metal commercial belt clip. For the XPLORER, I asked that they put a thick clear membrane on the front to allow access to the display and the buttons. The POWER button is covered by the fabric, so there should not be accidental turn-ons/turn-offs. There are holes in the fabric to allow the speaker audio through. For the Scout, they placed the clear membrane on the front, and opened part of that membrane to allow access to the switches on the front panel. The display, and the button are covered by the membrane, however. I decided to remove the supplied belt clip of the SCOUT so that the case can be a bit more snug. The stiff back and the metal commercial belt clip are part of the case also.
I believe they are charging $30 for the XPLORER case and $28 for the Scout case.
They do not have a web page up yet, but their email address is:

themarketwild@scescape.net

I don't receive any part of the money. These people are police officers who do this work on the side. I am trying to make their service known for three reasons; 1)that OPTO has made no effort to market cases in which you can carry around and use their products. They only have the zippered pouch case and 2)My thanks to this couple for working with me through several revisions of the cases to ensure my satisfaction and 3)There must be people out there like me who are worried about damaging the cases to the degree that they don't want to take them out of the house!

Two things: The couple is not geared to mass production, and must hand make these cases. Be patient. The total time for both cases for me was 2-3 weeks, but that was through several revisions and your milage may vary. The couple will be going out of town for vacation for one to two weeks, and you will probably not get a reply for a week or so if you e-mail them.

Two questions:

1. Was the BC800XLT ever sold by Radio Shack and if so what was the RS model number.

2. Anyone got a users manual they want to sell or know where I can download operating instructions.

Thanks.

>
> Any Advice?

The McDonalds here uses 154.570 as their drive through freq. We all know that the most common business radio freq is 154.570! Just get a radio from any radio dealer and order your food a couple of miles away! It's also great to chat with the attendents. I don't have a radio but I've heard plenty of fun chat over the freq on my scanner!

I can receive the local McDonalds drive thru over a mile away using an
HF wire antenna on 35 Mhz. A friend of mine once transmitted into their
system but he was just across the street.

Do you live in Norway and own a radio scanner?
Then why don't you consider joining our team ?

We can promise you a high level of activity and lots of hot news!

All our correspondence is based on exchange of E-mail. The whole team
participates in any scanner-related subject. New Scanner-frequencies
are shared, equipment evaluated and tested, discussed, traded,
bought,or
sold! We now have well in excess of 2200 Norwegian frequencies in our

tables to share!

You MUST own a radio scanner to join us, though.

Please visit our homepage at:
http://www.geocities.com/SiliconValley/4607/

Hmmm. Performs better than the Channel Master but according to the review in the American Scannergram posted on the NIL-JON site it is only better than a D130 discone on 800 mhz. The review says UHF reception was a toss up and VHF hi and VHF low band signals were equal and in some cases on VHF hi the discone was better. Having owned a number of antenna over the years including the Channel Master and a RS discone I find it hard to believe that the RS discone would ever out performs the Channel Master antenna. In reality the Channel Master antenna is far superior to any discone I have ever used. The NIL-JON antenna doesn't hold up well against the discone except on 800 Mhz. What gives? What is your connection with NIL-JON? Why recommend an antenna that even NIL-JON shows is inferior? Am I missing something?

Glenn

This guy seems to ALWAYS doubt the word of anyone who would dare
challenge the honor and truthfullness of an LEO. Well tell you what
John, if someone were to anonymously inform the feds, or local LEO
organizations about you trafficking in child pornography, or dealing
narcotics, or calling 911 and telling them you were seen brandishing
a handgun at another motorist.

Let's see then how strong a supporter you are of the 'cops are always
right' theory after they get thru assuming your a criminal, and
trampling the civil liberties you seem to feel all suspects are not
entitled too. The guilty until proven innocent school of thought..
Since it seems you always question the word of anyone complaining
about cops or 'JBT's

Also this is NOT to imply you are engaged in illegal activities, I'm
just saying it's prettty easy for someone to allege anything, and

the cops will treat you like scum. Which you don't seem to believe happens.

But from the sheer number of people in this group who get hassled over their scanners. That should be telling you something !

1304. Modifications for WinRadio

Ye Publique Notice:

Starting with V7N4, the monthly WORLD SCANNER REPORT will present a series of performance and feature modifications for WINRADIO. The first five articles will consist of the following titles or subject matter:

1. How to completely disassemble WinRadio
2. Reduce or eliminate crossover distortion
3. Reduce PLL phase noise by 12-13 dB
4. Prevent AM and NFM filter paths from loading each other. (Results in improved AM/NFM sensitivity by 3 dB)
5. Dramatically improve selectivity of shortwave reception.

Can anyone give me some pointers to what freq's might be used to talk between US Navy ships when they are in visual contact, no more than a couple of miles apart? On 7/21 I have a chance to get pretty close to USS Constitution when she is on her test sail. She will be accompanied by the USS Ramage, frigate and USS Halyburton, destroyer. I have the CG LANT freq's and they should be busy since there will be a substantial CG contingent. One report had over 100 CG surface and air units. I've one sugestion that the 38 mhz range is worth a listen for the Navy, but I've also heard that they use a lot of 450 gear when in close.

Subject: I. For Sale and Wanted To Buy

I am a ham hobbyist, NOT a dealer. I do this for fun, not an
investment! I have a few things to sell/trade these days:

I. For Sale and Wanted To Buy

A. For Sale:

1. FRG-9600 Yaesu 60-905 Mhz AM/FM/SSB scanner/receiver.
Original box, manual, etc. $325 obo

2. PK-232MBX, RTTY/AMTOR/Pactor/Packet/Fax latest firmware and
new in box. Purchased couple months ago and been in box since.
With receipt, box, manual, cables, etc. $175 obo

3. Gessy 12vdc 6a Bench Power Supply Offers?

B. Wanted to Buy:

1. ISA or VLB SCSI controller.

2. Collector of older RTTY terminal units looking
for more to add to collection, including:
IRL, Dovetron, Hal, Robot, Flesher, Frederick, etc

3. Looking for "select" older Yaesu "Fox Tango" equipment
and accessories for same, filters, boards, speakers, VFOs,
tuners, scopes, transverters, etc. Stations, estates, etc.
Working or not!

PLEASE REMEMBER THAT BECAUSE OF THE CRTC, FREQUENCIES IN CANADA DIFFER FROM THOSE IN THE USA... I am also looking for these frequencies, they are not to easy to find. I hope they use the same frequencies as last year's Toronto Indy. However, they might change because of that death last year... Who knows what will happen!!!

There is a great computer scanner recording program out there for your exact needs. It is called RecAll and can be found at http://www.sagebrush.com/~sells/recall.htm. I hope that this helps. I really enjoy it.

Wiggie

Most ships (US NAVY) use encrypted vhf for both line of sight and dx(home port comms via satellite). You will find them also on the standard marine VHF freqs for routine ship to ship stuff. stan US NAVY for 18 years!

Check out this website. I think you'll like it. It is a list of stuff that I find over the internet that you can get for free. It is updated daily with at least 10 new sites each day, and it is easy for you to use because it is put into catagories. Right now there are currently 87 free sites and it is growing each day. Here is the URL:
http://www.chez.com/rug/index.html

Even though the site doesn't do that much with scanners, I want you to visit my site because I WILL PUT A LINK TO YOUR WEBSITE ON MY WEBPAGE. What do you have to do to get a link on my page. First visit my website, then sign my guestbook, then email me with the link and the title of your page. I will check your page out, and if it has no adult content, I will put a link to it on my webpage.

You can email me at this address:
rug@chez.com

Thanks to everybody that visits my webpage,

SCANNER RADIO REVIEW BRIEFS

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Oct 1996 - Radio Shack PRO-2046 mobile
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable |

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW,

FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996.

ICOM

R-10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on

conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob

Parnass, in Monitoring Times, January 1997.

UNIDEN/Bearcat and Electra/Bearcat

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units.

DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a

quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor.

Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given

frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at www.grove.net.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

Regency

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88

-108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. For a quantitative test report, see "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997.

Radio Shack

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory

channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Cellular images throughout the 847.6 - 869 MHz range. Includes power saver circuit, odd for a base unit, which can clip the first part of a transmission. See September 1996 Monitoring Times for modifications.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually

unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50

frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," | by Bob Parnass, AJ9S, in Monitoring Times, August 1997.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

Craig (division of Pioneer)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker,

and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

Sonar

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no

FR2516 10 X yes yes
FR2517 10 X yes yes
FR2525 10 X yes yes
FR2526 10 X X yes yes
FR2527 10 X X yes yes
FR2528 10 X X yes yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

Tennelec

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and

wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including IBM's server:

I was carrying a Kenwood handheld transceiver...I had my original license and my RACES picture ID...also, I had a photocopy of MCL 750.508 in my glove box-- it did me no good...so it does not matter if you carry all of this stuff; if the cop is having a bad day, then you are doomed...

Since my arrest in late 1988, two other cases came up in ajoining counties; one in 1991 and the other just this past spring...and they too had all of this documentation with them ever since they learned of my case in December, 1988...it did them no good...

What really upsets me is that I had to pay court fees and attorney fees and then it was thrown out...and those fees are non-refundable....could I have sued for these fees? YES! However, I did not because I was going to college at the time and had no time and no money (and it would have cost more money...and who knows, the battle could still be going on if I pushed the issue) OH WELL.....live and learn.

Thanks for the reply,
WILLY

For anyone that is interested in Florida's rules on mobile scanners, here is the state statute. Title XLVI Crimes, Chapter 843 obstructing justice, Section 843.16 Unlawful to install radio equipment using assigned frequency of state or law enforcement officers: definitions: exceptions: penalties.
(1) No person, firm, or corporations shall install in any motor vehicle or business establishment, except an emergency vehicle or crime watch vehicle as herein defined or a place established by municipal, county, state, or federal authority for governmental purposes, any frequency modulation radio receiving equipment so adjusted or tuned as to receive messages of signals on frequencies assigned by the Federal Communications Commission to police or law enforcement officers of any city or county of the state or to the state or any of it agencies. Provided, nothing herein shall be construed to affect any radio station licensed by the Federal Communications System....
(3) This section shall not apply to any holder of a valid amateur radio operator or station license issued by the Federal Communications Commission or to any recognized newspaper or new publication engaged in covering the news on a full-time basis or any alarm system contractor certified pursuant to part II of ....

It looks like your relative needs to read up on Florida statue. Copied directly from the statue. Sorry,
Frank
PD Dispatcher in Orlando.

scanner??
> Really? Your town is so small that a scanner incident is all over the
local
> paper? WOW! OK, I give what did you do to get pulled over in the first
> place?
THIS WAS THE FIRST TIME AND THE ONLY TIME I WAS PULLED OVER. I WAS
TRAVELLING DOWN US HWY 41 AT 40 MPH AT 1 AM...AND I WAS THE ONLY CAR ON THE
HWY AT THE TIME, EXCEPT FOR THE SNOW PLOW THAT PASSED ME ONCE I WAS PULLED
OVER--THEY WERE OUT SCRAPING THE ROADS AND SANDING. THE COP CAR FOLLOWED
ME FOR 2 TO 3 MILES OUT OF TOWN BEFORE PULLING ME OVER. I WAS PULLED OVER
FOR OBSTRUCTED VISION DUE TO THE ICE ON MY WINDOWS...IT WAS RAINING
FREEZING RAIN THAT NIGHT AND THAT WAS THE REASON FOR DRIVING SLOW...I WAS
BEING CAREFUL. I WAS ISSUED A TICKET FOR THIS AND WHEN THE OFFICER (HE WAS
ALONE UNTIL I REQUESTED THE US MARSHALL AFTER I WAS PLACED IN THE BACK OF
THE CAR) RETURNED TO MY CAR WITH THE TICKET, HE SAW MY 2 METER HT SITTING
ON THE SEAT AND ASKED ME WHAT IT WAS...I POLITELY ANSWERED "AN AMATEUR
RADIO, AND I HAVE A FEDERAL LICENSE". HE ORDERED ME TO STEP OUT OF THE CAR
AND FRISKED ME AND CUFFED ME AND PLACED ME IN THE BACK OF HIS CAR. ONCE
THE MARSHALL ARRIVED, THEY ALLOWED ME TO PRESENT MY LICENSE AND RACES ID.
THEY THEN ALLOWED ME TO DRIVE TO THE DEPARTMENT WHILE THEY FOLLOWED ME...

I DID FIGHT THE TICKET, HOWEVER, AND I HAD A COPY OF THE WEATHER REPORT
WITH ME FROM THE LOCAL WEATHER BUREAU, BUT I LOST THAT AND PAID $35. THAT
WAS MY ONLY TICKET AND I MARKED IT DOWN AS EXPERIENCE...I WAS ONLY 19 AT
THE TIME...SO THEY DIDN'T TAKE ME SERIOUSLY.

thanks for the reply,
WILLY

I have a radio shack pro-2036. The problem that I have is that there is gaps in the frequencies for example: I type in the frequency 893.0000 and the screen says error. I know this happens on lots of scanners, but why does it happen? Is there a way to make it so you can go to all of the frequencies?

Any help is appreciated,
Thanks,
Kyle

I more or less did the same thing. Only I used a length of all-thread
screwed it into the top and it made quite a difference. I think the
cost was less than 3 dollars to do this. You might give it a try, if
it doesn't suit your needs you are not out much.

Stroking one's rubber ducky is no laughing matter to those of us afflicted with the dreaded lasticadonaldus disease! I resent your making fun of us. I can't help it that I was born with the urge to fondle, spindle, fold and mutilate rubber duckies. In fact, it is the only way that I can manage to take a bath. If you would but walk a mile in another person's shoes, you would see that this is a terrible, terrible curse.

>
> Best regards,
>
> Alex 73/18rdpl codes or as i know them dcs (digitaly coded squelch) uses around 250
codes but they can be reversed (ie inverted) repeaters can sometimes
invert the codes (an option in the setup alows to correct)
the codes are standard (compatable)
all i know they are an octal code at about 150 baud.
encoding is done straight at the vco,as it is a square wave and needs to
be modulated symetrically to work and to be inaudible.
i cant get dcs to work on phase modulated radios.

1346. Charging Li-Ion Batteries

Can the "new" Lithium Ion (Li-Ion) batteries be charged in a
conventional ni-cd or ni-mh charger? I was told NOT - that the
new Li-Ion batteries needed a specific/special charger for
all charging purposes?

F O R S A L E

(add shipping to prices...)

MOTOROLA MTX9000 fm handi-talkie radio,
model H01WCF4DB5AN NX type WCMA.
900mHz range. With charger and info.
Only $499.

..... FOR YOUR DRIVING PLEASURE .....
1929 Mercedes SSK kitcar on VW chassis. Just completed, never titled.
Yellow, with brown fenders and running board, tan convertible top, side
curtains, and tonneau cover. Gold trim instruments.

COBRA 18-ULTRA CB ---- 40 channel, pushbutton tuning, with 3
NOAA weather channels. Includes microphone, but no mounting
hardware. $ 35.

LEXMARK/IBM PORTABLE PRINTER 5183 ---- powered by rechargable
battery or AC wall adaptor (included), this printer is only
11.5" x 3.5" x 2", and weighs about 2.5 pounds with battery
in place. Using silent thermal print head, it will print on
either thermal fax paper or on regular paper using the enclosed
thermal transfer ribbons. Very quiet in operation, and because
it runs on a battery, it is completely portable, for use with
laptop computers anywhere. Includes parallel port cable. $89.
.

------------------- F L A S H L I G H T S ---------------------

4-D cell (2x2 style), krypton bulb. In box, never used.
$5 + shipping.

6-D cell multifunction lantern. Sleek tubular style with
bright incandescent light at end, 6W fluorescent bulb
along bottom, and flashing red and yellow on top. Also
has electronic sonic alarm that can be switched on with
the flashing lights. In box, never used. $12 + shipping

3-C cell Eveready worklight-style. Bright yellow with
hook for hanging, frosted bulb to diffuse light over area.
Unused, but no box. $5 + shipping

Batteries NOT included.....

COCA-COLA caps. Red cloth, white lettering. New.
$8 each + shipping. Only 9 available.

add shipping to all prices, only in US....
if interested, leave e-mail...

>Ham license, only an officer of the FCC can ask for it, and even THEY
>won't since you don't need to have it ON you anymore! All you need is
>an issued callsign.

I thought all FCC transmit licenses were supposed to be affixed to the
transmitter or a reasonable distance to it? Granted this is silly for
a ham operator because of the different amounts of equipment they may
have.....but you should still have it with you.

As for a cop not being able to ask for your ticket - this is not true.
You are saying a local cop (or state - whatever) has no authority to
enforce a Federal violation.

If the cop is investigating a situation that involves you transmitting
on, what he believes, a ham radio - he can certainly ask for proof
that you are authorized to do so. Because if you are not authorized,
there is a Federal law being violated.

In some states, you are allowed to carry a handgun concealed with the
proper paperwork. If the cop sees that you have a gun, do you think
he'll ask to see your handgun license?

A possible source for Lithium Ion batteries is:

Pro Battery Specialists
890 West 23rd Street
Hialeah, FL 33010
800-572-4888
305-884-3483 Fax

I just recieved a flyer from them and they seem to have a wide variety.
Not sure if they are wholesale, retail, or both.

Good Luck,
John

Well Ralph,
If you've really retired the PRO-43, I might be interested
in taking it off your hands. The 43, while not the modern and
feature-laden wonder that the BC3000 is, is MUCH more
sensitive overall and MUCH better at interference rejection
than the BC3000.
I think you might consider bringing the 43 out of
retirement for your own personal use if not at least to sell
it and make some good $ from it!
Happy monitoring!

It is in beautiful condition and works well. First, there is
r>a slight hum when a frequency is activated and there is a transmission
r>coming through the speaker. The hum is most noticed in the UHF band
r>and significantly less in the VHF-low band.

Ray, I seem to remember that these scanners did have a noticeable hum on the audio. Not tremendously annoying, but there none the less.

r>Secondly, being this is a nice heavy wood cabinet, it is really
r>attractive. Anyone know the going rate for such a unit on the open
r>market? (I presently don't look to part with it but would be nice to
r>know if I bought it right or paid too much!)

Unless someone really has to have one, probably not much since it is about 20 years old. However, you can look at the web site of G&G Communications for a possible answer. They have a lot of old scanner for sale, and might have one listed. Sorry, I don't have the URL, but you can find it pretty easily using any Internet Search Engine.

While the FCC has jurisdiction over Federal matters, a sworn law enforcement officer can request proof of any radio license if he/she doubts your claim. Poilice officers ask to see Federally issued firearms permits, what makes this so different?

The fact of the matter is that if what the gentlemen says is true, that he was arrested for simply being in posession of a radio he was licensed for, than he has one hell of a case for abuse of the criminal justice system, malicious prosecution, false arrest, false imprisionment under color of legal process, etc. If he/she was out chasing police/fire/ems calls, they get what they deserve. Most officers I know (and know very well in Fulton County, GA) don't get suspicious of people simply being in posession of ANY radio device, only when circumstances warrant it (i.e, someone driving a Crown Victoria or other police-like vehicle with police-type lights, sirens, radios, etc). And if this individual feels SO violated, why not post your real name, case number, accusing officer(s), agency name, etc ? If I were screwed over like that, I sure would!

There's always another side to every story. What's the case number so those like myself can request a copy of the paperwork (it is a matter of public record), or something other than a blanket story about simply being busted for having a radio/scanner/phone or whatever.

I found an undocumented Uniden Sportcat 150 feature (Great scanner by
the way). Before you turn it on press and hold the WX and L/O keys.
Turn it on and it shows the voltage left in the battery. When you are
in this mode pressing the number keys brings up numbers you can adjust.
Press the DC/Bank button does things too. If anyone knows what this is
please Email me at afowler@juno.com. I tried Uniden customer support.
It is always busy.

Strong Signals,
afowler@juno.com

http://www.potg.com/
See: Why everyone on the internet is talking about this progressive new website; why up until now, this site has grown simply by word-of-mouth.

Hear: The show that is breaking boundaries on the radio, making it an entertaining medium once more, and why certain sites have already heralded it as "the show that will redefine radio and will usher in a new style of comedy for the 21st century."

Taste: The difference between Planet of the Grapes' potent style of humor and the type of humor that makes you turn off your television or radio in disgust. The show's hosts guarantee that whether you like it or not, it is impossible to deny that it has a unique, fresh style.
The Hosts: Deaze Beans, Yahdderman, and U.B. Jackson
The Show : Planet of the Grapes
The Site: http://www.potg.com/
The Reason: Join the bandwagon that is headed into the future of comedy!

>page. I mostly wanted to look at the source code, to see what changes
>were there.

>NO SOURCE CODE!

First, *I* am NOT the author.

Second, *I* made no chages to program.

Third, NO source code was provided to me when I was sent the updated 2/17/97 aka V2.0 version of the Trunker program.

Lastly, I have and make NO claims as to being the author, requesting credit, or monies from this program. I am simply offering the program for download on my web site.

>I feel that's contrary to the spirit of the original author, who put
>in a lot of effort to produce something for everybody's benefit, and
>made it freely available to all in a form for anyone to modify and
>extend. You wouldn't even HAVE a "improved" version to distribute if

>file that you distribute. Please include the documentation written by
>the original author explaining how the program works. And, please
>give appropriate credit to the original author by leaving his
>pseudonym, arron5@geocities.com, in those files.

If your the author, and wish to send me the source code(s) for V1.0 & V2.0 I will gladly add these to the archive. I don't have them, so I can not include them. I can not include what I don't have.

Also, I have NO SOURCE for V3.0 of the program, as I was sent only an EXE file, and an HTML file which you see when you click to download V3.0.

I make NO CLAIMS, AND REQUEST NO MONIES for these programs. My page clearly states the source was posted on UseNet and "generous" persons

sent me compiled versions. I don't have a C++ compiler.

I am Geek Spice, and you're not! So, who do you wanna be? ?

Hi all~
I received a message today on my machine from Fed X notifying me that a scanner (AOR AR8000 ATR limited) I ordered from Durham Radio in Canada had been siezed last night by US Customs for violation of :
19USC 159a (L)
and
47USC 302 (or402?)
Also being held are 2 antenna's, 2 stands, and a leather case in the same package. Anyone have any experience with this sort of thing? Any help? Any ideas of what I can or should do? What's the worst that can happen? Will they destroy it? Will they send it back to Durham and can I get a refund? Please reply via email or here. Mucho Thanks in advance, need advice in a hurry.

I did reply to your email and I did tell you the real reason for being pulled over...it is posted here on the group.

Yes, I am innocent. I am a little more responsible than you give me credit for...I was listening to 146.760 MHz and my radio DID NOT transmit out of band. No, I did not fight back because the lacked the money and time.

Also, I generally go through life by following the general rule, forgive and forget....so that is why I did not sue them for what they did. However, I thought I would just write about it so others can see that things like this happen in the US.

I am sorry that you have so much doubt.

I appreciate to reply, tho...thanks you,

73 de WILLY

I have one. It is a very good scanner, however, there is no cellular mod available that I know of. It has a good search and save feature. But it saves every frequency it hits. This can mean duplicate frequencies being stored in a bank. I understand Radio Shack has a newer scanner that fixes this problem.
I have a pro34 and another old 10 channel scanner. This is my first base unit.

The F.C.C. says you (an amateur radio op) do not need in your posession
your lic. or copy. It is to remain at your operating residence.
period...what part don't u understand?
Futhermore, there is no way "any" local law enforcement officer would
ask to see your (or mine) Amateur radio lic. "He would have absolutely
no authority" in such matters! PERIOD...
THE carry permits your refer to are issued under "STATE" and local
authority, "NOT" federal. Just as a county sheriff from another county
would'nt attempt to enforce your county's civil laws, a local "cannot"
enforce federal laws. Break a federal law and get convicted in a fed.
court, you spend time in a fed. prison. Break a state law and spend time
in a state prison.

Back to the lic. thing, here in Mi. the state law reads that an amateur radio op my have a scanner in his car which obviously carries over to hand scanners. hope that clarifies your situation..73 KI8AG AL

Who gives a rat's for this ?

My scanner is good, but it can't pick up Norway !

Please keep it to the relevant groups (which aus.radio.scanner ain't !)

This works to defeat the power saver function for the PRO-43 and I am almost positive that the PRO-60 works in the same manner: Enter 'Direct' mode by pressing that key. If you do not hit the up or down arrow, the scanner will stay on the selected channel frequency and the power saver does not operate. I hope this helps.

Absolutely true!....However, why is it when someone posts an article about all the trouble the law enforcement community is causing him, We are never able to get any facts? I asked this gentleman (?) poitely and privately via e-mail to provide me with some info about this case. This was AFTER he offered to do so in a public post. As of yet, I still have not even received a response from him, either here or in e-mail.
You'll see in one of my posts that I had a similar incident happen to me, but I was MAN enough to admit I had some responsibility in the matter. According to this fellows post, he wants us to believe he was just minding his own business....which could be true.. I would believe him a tad more if he would provide me with any info ......that way I can look up the FACTS of the case.

Yes, I do support the majority of L.E.O.'s ...most are hardworking individuals who have a family to support, and are just doing the absolute neccessary to serve the public.
Do I believe their are no crooked cops?.....com'on now, even I'm not that naive. BUT..they are by far the exception, not the rule.

I will bet that with the sheer number of folks that get hassled because of their scanners....the majority are someplace they didn't need to be.
Face it, if there is a big brew-ha-ha going down, and you are 1 mile away listening to it, no-one is going to notice or care.

By the way, just because it's posted here, does not make it true. FACTS people JUST THE FACTS

1396. Need Reedy Creek FL (Disney) TT info

Newsgroup: rec.radio.scanner
Date: 1997-07-15 00:00:00 UTC
From: daveg126@aol.com
Message-ID: <19970715012100.VAA06255@ladder01.news.aol.com>
Source record: 191671

I am looking for reliable/verified info on the TT system used by Reedy Creek Improvement District for the Walt Disney World PD/FD/EMS. All rf frequency info I have seen published does not seem to work- there does not seem to be a data channel. Perhaps the published data lists an obsolete (or otherwise inactive) system. I am quite certain that WDW PD/FD/EMS is on a Trunked system, but it does not seem to be part of the large Trunked system used for park operations.

Any help appreciated.

FS: 2-month old Pro-2042 with OS-535 installed. $585 plus shipping
(preferred: fedex 2-day or 3-day COD). Comes with demo
versions of software, ready for plug & play
computer-controlled scanning. Physical condition is mint, comes
with original box, manuals, etc.

This is an excellent scanning combo...I'm selling because I
bought an Icom 7100...

Please respond via EMail.

Vinnie,
I would suspect that you don't find it odd that the original poster, Paul (my friend got busted listening to 902) Racine received support over a week later from Willy(I was busted for a scanner in my car Xmas eve 86). I am sure you can explain why Willy and Paul Racine are the same person. Odd isn't it? Makes you believe every single word of it doesn't it?

Sorry. Are you talking about the EL or the LCD display. These are
2 seperate components. The EL slides behind the LCD display. 2 wires
are soldered to a PCB. Tandy repair could do it pretty easily. Maybe
even your local radio or TV service shop or a qualified tech down the
street will do it for you. The LCD display itself is a bit tougher
and would best be left to Tandy, IMO.

A scanner IS a ham radio if you are using it to Recieve the person you are talking to. For dual band use on a single band radio, you need a scanner, it BECOMES part of your Ham radio.

>
> Make sure you have your ham radio station license also. If you don't,
> the police may become suspicious of you.

You no longer need to carry a copy of your ham license around with you for a couple of years allready. The cop has no business asking for your Ham license, only an officer of the FCC can ask for it, and even THEY won't since you don't need to have it ON you anymore! All you need is an issued callsign.

>Version 3.0 is available via my web page, URL below.

I took a look at the TRUNKER.ZIP you have for download on your web page. I mostly wanted to look at the source code, to see what changes were there.

NO SOURCE CODE!

I feel that's contrary to the spirit of the original author, who put in a lot of effort to produce something for everybody's benefit, and made it freely available to all in a form for anyone to modify and extend. You wouldn't even HAVE a "improved" version to distribute if the original author hadn't made it possible by posting the source code for the original trunker.

So, this is my request: please include the source code in the .ZIP file that you distribute. Please include the documentation written by the original author explaining how the program works. And, please give appropriate credit to the original author by leaving his pseudonym, arron5@geocities.com, in those files.

It's only right. Thanks.

1412. Aluminum Siding - Effects on Antennea

Newsgroup: rec.radio.scanner
Date: 1997-07-15 00:00:00 UTC
From: bluness@juno.com
Message-ID: <33cd1da6.18781669@news.one.net>
Source record: 191687
Cross-posted to: rec.radio.amateur.antenna,rec.radio.scanner,alt.radio.scanner

I have aluminum siding on my house, and I was wondering how
this affects reception of the following frequency ranges:
31 meter
43-49 mhz
150 mhz
400 mhz
800 mhz

Would the aluminum block the radio waves' full strength, would
mounting a dipole on the OUTSIDE of the house's aluminum siding affect
the reception at all?

Easy, Use the methiod I used to use years ago to decode a DTMF string.
Record them and play them into back into a digital pager. Easier cheap
ways to do it now-a-days, but it still works well.

jamoran@mail.goodnet.com (John Moran) wrote:
> divide 300/frequency for wavelength in meters!

Small problem - the value of 300 x 10 meters/sec is the velocity of electromagnetic radiation in free space. In an antenna element the velocity is reduced by a propagation factor dependent on the ratio of the wavelength to the diameter of the conductor. A usual rule-of-thumb is to multiply the free space wavelength by .95 to get the length for a wire antenna.

For frequencies in MHz, this gives:
1/2 wave = 468/freq (ft) = 142.5/freq (m)
1/4 wave = 234/freq = 71/freq

For a 1/4 wave element at 46 MHz, the length would be 61 inches. (Actually, using 1/8" rod, the factor would be .97 and the length 62"). As the diameter of the element approaches the wavelength (rod or tubing at microwave freqs), the factor decreases.

Hardly a scam but certainly aimed at those with little technical knowledge.

Actually I was surprised that they actually send you a scanner. I was expecting $150.00 for a sheet of paper with freqs.. hahaha. ;) I actually got something similar but you had to provide the scanner. Then again it was reasonably priced at $10.00. Although the information is free on the web and elsewhere.

The liability issue is one that is more interesting. Oh well, leave that up to the legal department.

Thanks for the laugh,

One more time for the newbies:

The FCC does not enforce Federal criminal statutes. The FCC does not have jurisdiction over ECPA. The FCC is responsible for those communication-related regulations that it passes as directed by Congress (and a few other things). Law enforcement is conducted by the Department of Justice (ever heard of Janet Reno), and Title 18 is enforced by the FBI.

Greetings Steve,

It's the same in USA -- may even be the same protocol as AMPS and NAMPS phones frequently cross the border in both directions. I have the list of channel frequencies at home, and they range from 840 to 890 or thereabouts, with more or less standard offsets for input and output frequencies. (Sort of like a very fancy repeater that controls your radio's tuner and power level..)

Incidentally, completely off the subject, I heard a VE call here in TX the other day. Got pretty excited about the E-layer skip till I found out he was visiting Austin and working the local repeaters.. ;-) did work Gonzales and hear Houston though..

>
>This is bullshit. The FCC doesn't issue traffic tickets, and police
>don't enforce radio violations.

No, but the police do enforce nuisance ordinances. What about your neighbor's complaint that your radio is interfering with their audio equipment where there is a nuisance ordinance that appears to cover such situations? The police can enforce the ordinance as written, whether it is ultimately found to be a "good" law or not. The point at which things get nasty is a long time before you get your say in court.

Now, in a situation like that, why not do the officer the courtesy of showing him your Federally-issued ham radio license? The department or municipality may already have some guidelines on dealing with properly licensed radio stations which do not involve issuing appearance tickets to their operators or (perhaps illegally) confiscating their radio equipment.

The same argument goes for the mobile scanner debate. If your state V&T regulations exempt licensed hams, are you going to politely produce your ham license for the officer, or are you going to be a jerk and tell him he lacks jurisdiction? The second choice is the surest way to have your radio (if not your car) impounded until you can appear in court - and win your case. There are also other annoying little charges that can be made, like Obstruction of Governmental Administration, etc.

A little courtesy to the police up front is much cheaper than hiring a lawyer to get you out of the hole you buried yourself in when you got pulled over.

I missed the original message to which you were replying, but it is
not illegal to possess cell-capable scanner anyway. Doesn't matter
when it was made or imported. The manufacture, sale, and importation
of NEW cell-capable scanner models is illegal, not possession or use.

Huh? Let's say his freq is 46.61.

300/46.61= 6.436387041407

So, he needs a vertical element 6.4 meters long for that freq?
That CAN'T be right?

Where's the remaining conversion?

Check the ebay listings and see what old Radio Shack and Lafayette
catalogs are selling for. These are a lot of fun to look through, and
also to research and identify old equipment. You reallly should look
through your stuff, because I've discovered that most any old
radio-related paper sells, and it's easy to ship.

Hi, Jim:

I'm not sure about Temecula, but I assume their Riverside County system is the same as the rest of the County and that is a GE trunking system.

I do know that the system out in the Coachella Valley is GE...I've taken my scanner with me when we visit my mom and I can recall hearing those damned GE tones after each transmission.

I don't know much about the new Uniden Trunktracker, but I think I have read it only follows Motorola systems.

19 USC Sec. 154 to 159 (01/16/96)

154 to 159. Repealed. June 17, 1930, ch. 497, title IV, Sec.
651(a)(1), 46 Stat. 762, eff. June 18, 1930

47 USC Sec. 302 (01/16/96)

302. Repealed. June 5, 1936, ch. 511, Sec. 1, 49 Stat. 1475

47 USC Sec. 402 (01/16/96)

402. Judicial review of Commission's orders and decisions
(a) Procedure Any proceeding to enjoin, set aside, annul, or
suspend any order of the
Commission under this chapter (except those appealable under
subsection (b) of this section) shall be brought as provided by and in
the manner prescribed in chapter 158 of title 28. (b) Right to appeal
Appeals may be taken from decisions and orders of the Commission to
the United States Court of Appeals for the District of Columbia in any
of the following cases:

(1) By any applicant for a construction permit or station license,
whose application is denied by the Commission.

(2) By any applicant for the renewal or modification of any such
instrument of authorization whose application is denied by the
Commission.

(3) By any party to an application for authority to transfer, assign,
or dispose of any such instrument of authorization, or any rights
thereunder, whose application is denied by the Commission.

(4) By any applicant for the permit required by section 325 of this title whose application has been denied by the Commission, or by any permittee under said section whose permit has been revoked by the Commission.

(5) By the holder of any construction permit or station license which has been modified or revoked by the Commission.

(6) By any other person who is aggrieved or whose interests are adversely affected by any order of the Commission granting or denying any application described in paragraphs (1) to (4) of this subsection.

(7) By any person upon whom an order to cease and desist has been served under section 312 of this title.

(8) By any radio operator whose license has been suspended by the Commission.

(c) Filing notice of appeal; contents; jurisdiction; temporary orders Such appeal shall be taken by filing a notice of appeal with the court within thirty days from the date upon which public notice is given of the decision or order complained of. Such notice of appeal shall contain a concise statement of the nature of the proceedings as to which the appeal is taken; a concise statement of the reasons on which the appellant intends to rely, separately stated and numbered; and proof of service of a true copy of said notice and statement upon the Commission. Upon filing of such notice, the court shall have jurisdiction of the proceedings and of the questions determined therein and shall have power, by order, directed to the Commission or any other party to the appeal, to grant such temporary relief as it may deem just and proper. Orders granting temporary relief may be either affirmative or negative in their scope and application so as to permit either the maintenance of the status quo in the matter in which the appeal is taken or the restoration of a position or status terminated or adversely affected by the order appealed from and shall, unless otherwise ordered by the court, be effective pending hearing and determination of said appeal and compliance by the Commission with the final judgment of the court rendered in said appeal.

(d) Notice to interested parties; filing of record Upon the filing of any such notice of appeal the appellant shall, not later than five days after the filing of such notice, notify each person shown by the records of the Commission to be interested in said appeal of the filing and pendency of the same. The Commission shall file with the court the record upon which the order complained of was entered, as provided in section 2112 of title 28.

(e) Intervention Within thirty days after the filing of any such appeal any interested person may intervene and participate in the proceedings had upon said appeal by filing with the court a notice of intention to intervene and a verified statement showing the nature of the interest of such party, together with proof of service of true copies of said notice and statement, both upon appellant and upon the

Commission. Any person who would be aggrieved or whose interest would be adversely affected by a reversal or modification of the order of the Commission complained of shall be considered an interested party.

(f) Records and briefs The record and briefs upon which any such appeal shall be heard and determined by the court shall contain such information and material, and shall be prepared within such time and in such manner as the court may by rule prescribe.

(g) Time of hearing; procedure The court shall hear and determine the appeal upon the record before it in the manner prescribed by section 706 of title 5.

(h) Remand In the event that the court shall render a decision and enter an order reversing the order of the Commission, it shall remand the case to the Commission to carry out the judgment of the court and it shall be the duty of the Commission, in the absence of the proceedings to review such judgment, to forthwith give effect thereto, and unless otherwise ordered by the court, to do so upon the basis of the proceedings already had and the record upon which said appeal was heard and determined.

(i) Judgment for costs The court may, in its discretion, enter judgment for costs in favor of or against an appellant, or other interested parties intervening in said appeal, but not against the Commission, depending upon the nature of the issues involved upon said appeal and the outcome thereof.

(j) Finality of decision; review by Supreme Court The court's judgment shall be final, subject, however, to review by the Supreme Court of the United States upon writ of certiorari on petition therefor under section 1254 of title 28, by the appellant, by the Commission, or by any interested party intervening in the appeal, or by certification by the court pursuant to the provisions of that section.

I think you misquoted the laws, 19 USC 1595a is a seizure statute which
says an article is subject to seizure if it is importerd contrary to law.

The law in this case says scanner radios which can receive cellular
transmissions are illegal to import.

Sorry,

The rules were changed for "commercial" radio as well. Private land
mobile and private fixed microwave stations are not required to have a
license "affixed on or near the radio anymore". You do have to post
where the license can be located. This was nice reduction in paperwork
for people like me that maintain several radio sites with several radios
each - we now only have to post a note saying something like "FCC
authorization for this station is available for inspection at [insert
main office address here]".

> arrest the DJ for not giving legal ID on the hour? Radio is enforced
> only by the FCC, Airplanes and laws are enforced by the FAA. A police
> officer has NO AUTHORITY to demand to see your Amateur Radio License.

That all depends... For example - some states prohibit the
possession/use of radios "capable of receiving" police communications

from being used in a vehicle. All such state laws now have an exemption
for licensed amateurs. If you are stopped and claim to be "exempt" it
is within the police officer's authority to ask you for your license.
Not becasue he is enforcing a FCC rule or reg, but because the local law
requires you to have the license if you want the cop to leave you alone.

> > If the cop is investigating a situation that involves you transmitting
> > on, what he believes, a ham radio - he can certainly ask for proof

> > there is a Federal law being violated.
>
> This is bullshit. The FCC doesn't issue traffic tickets, and police
> don't enforce radio violations.

Depends on what the cop is investigating.

Again - they don't enforce FCC rules, but they can enforce local law.
If you claim to be exempt from the provisions of a "local law" because
you are a licensed amateur (or licnesed anything depending on the law),
the the local enforcement authorities are within their jurisdiction to
ask for your "instrument of authorization from the FCC".

Of course since you can now operate without your actual license in your
possession (you found your call in the FCC database) any local
enforcement should give you reasonable time to produce proof that you
are licensed. However this is probably a good example of why having at
least a copy of your license is a good idea - could make things go
quicker - cop just says, "Thank you. Here's your speeding ticket.
Drive safely... and 73 <grin>." I keep a copy of my "little license" in
my car and my wallet in case I am ever travelling in a state where
Deputy Dawg might say "wot you doin wit all 'em radidios in your car,
boy?"

Here in California we are allowed to carry scanners, radar detectors,
etc. in passenger cars. So no cop here is going to ask you for a radio
license on a routine traffic stop.

Florida and Georgia have a reciprocity agreement. CCW permits issued in
either state are valid in both states.

Lucky for you, there was only a representative from the FCC there. As we all know, the FCC has no jurisdiction in murder - that is a STATE violation.

I appreciate the humor on this topic which has really gone on too long.

You should mention that it has full coverage of 40-50 Mhz. That makes it capable of receiving most handheld phones. It's this models best feature.

:>>
:>> Steve Carlisle VE7AHL
:>
:>*IF* and I emphasize the word *IF* the above story is anywhere near
:>true , I would suspect what the person in question was listening to
:>was an image frequency of a cell phone conversation that was taking
:>place in the authorized cell phone band. I was at Radio Shack once and
:>the salesman was demonstrating the frequency range of a scanner to a
:>customer when we started hearing a quite titillating (guy-gal ;))
:>conversation on cell phone. Neither the customer nor the salesman
:>could explain it until I butted in and told them it was an image
:>frequency from the cellular phone band. FWIW if you'll check the
:>newsgroups alt.radio.scanner and rec.radio.scanner you'll see that
:>some who like to listen to cell phone conversations have made a
:>science out of determining their scanners IF(s) and listening to the
:>image frequency which is the cell freq + the IF.
:
:An image will always be spaced 2*IF from the frequency indicated
:on the tuning display of the radio. Whether that's 2*IF above or
:below the indicated frequency depends on whether the receiver
:uses low side or high side injection.
:
: So if you were listening at an indicated 909 MHz, the scanner has a
:10.7 MHz IF, and the scanner uses low side injection, then the cell
:frequency being imaged will be 887.6 MHz. If the scanner uses high
:side injection, indicated frequency will be cell frequency - 2*IF. In this
:example, it would be 866.2 MHz. That's locked out too, so in this case

866.2 should not be locked out since it is not in the cellular range.

Barry

Source record: 191442

Hi there,

I'm living here in Canada, and I'm thinking about buying a new scanner. I want to make sure that the scanner I can buy is modifiable to recieve the 800Mhz channels. I would like a base model, and from the information I have found, it looks like these models are able to be modded:

PRO-2004
PRO-2005
PRO-2006
PRO-2022
PRO-2026
PRO-2030
PRO-2032
Uniden 890XLT

Can someone confirm this for me? I've heard that most scanners built after April of 1994 are not able to be modified. Remember, I'm buying a NEW scanner, so what direction shuold I go?

Thanks for the help

Actually, it's spelled Anne Arundel and it should be mentioned that it borders Baltimore City and Baltimore County both of which are hotbeds of activity.

The "CI-V Icom Communication Interface - V Reference Manual"
contains the format for all messages to-from computer and radio.
I've got an early (original) version and a later one- about 50 pages -
fairly comprehensive.

Icom will send it to you (for a charge - can't remember how much)

Unless I misread your post, you infer that you deliberetly withheld
your ham license until a "Federal Deputy" was present. If that's the
case, regardless of the foolishness of Michigan's laws, you seem to
have screwed yourself.

Geez,
I guess I will spill the BIG secret since everyone else is too....I have 9
rubber duckies and I can't help stroking them....I know I should be
ashamed...But the
Telescoping whip on my AOR 8K is JUST too inviting to not extend it
out....
I have had trouble with my BC235xlt "TrunkTracker" Rubber Ducky....I just
can't
get the Center Pin on the Rubber Duck up....I guess I will have to get an
implant..
Anyway, The Truth is out and now I will NOT get help but continue to Buy
Rubber Ducks and the radios they come with!!! Are you with me, Fellow
Scanner Buffs??
Take Care :^)

Neither ownership of a firearm or of a two-way radio require a Federal permit. Possession of a two-way radio in public does not require a Federal permit. Operation of said radio does.

1499. FS: Pro-24 Handheld 800mhz Scanner - $65 shipped

Newsgroup: rec.radio.scanner
Date: 1997-07-16 00:00:00 UTC
From: rbatina@infinet.com
Message-ID: <5qh2uc$4k7@news1.infinet.com>
Source record: 191617
Cross-posted to: misc.forsale,misc.forsale.non-computer,alt.forsale,rec.radio.scanner,oh.forsale,cmh.forsale,osu.for-sale

I am selling my Radio Shack PRO-24 800mhz scanner for $65 including shipping. This scanner picks up all the lower cordless phones, and even the newer 900mhz phones that are supposed to be more secure. But of course, listening to them would technically be against the law. It has 16 channels where you can save your favorite frequencies, but you can also direct enter them to listen. It also has the National Weather Service frequencies at the touch of a button so you can get the latest forecast.

It has a power jack, a charging jack, and an earphone jack. It doesn't have a belt clip, but it has a place for one. It has the nice short "rubber duck" style antenna, which is very rugged. This scanner also comes with the original instruction manual. This scanner is in GREAT condition... no scuffs or scratches. Works perfectly.

Radio Shack Pro-24 (Model #20-503) Frequency Coverage:

VHF-Lo.....29-50 MHz (in 5 kHz steps)
Amateur Radio.....50-54 MHz (in 5 kHz steps)
Government.....137-144 MHz (in 5 kHz steps)
Amateur Radio.....144-148 MHz (in 5 kHz steps)
VHF-Hi.....148-174 MHz (in 5 kHz steps)
Amateur Radio/Government.....406-450 MHz (in 12.5 kHz steps)
UHF Standard.....450-470 MHz (in 12.5 kHz steps)
UHF "T".....470-512 MHz (in 12.5 kHz steps)
UHF Public Service..... 806.0000-823.9375 MHz (in 12.5 kHz steps)
851.0000-868.9375 MHz (in 12.5 kHz steps)
896.1125-956 MHz (in 12.5 kHz steps)

If you would like to hear a WAV audio file captured from this scanner, please go to this link... http://members.aol.com/rubbertow/scanner.wav

$65 including shipping in the US. Thanks, Rob - rbatina@infinet.com

1501. West Coast Listenin

Newsgroup: rec.radio.scanner
Date: 1997-07-16 00:00:00 UTC
From: spell189@aol.com
Message-ID: <19970716061401.CAA06362@ladder02.news.aol.com>
Source record: 191619

I posted this question to another group but did not get much response.

I work for a law enforcement agnecy on the west coast which still dispatches on 42 mhz radios (the radio head has practically every police channel in the 42 mhz band programmed in it). Several times on graveyard shift I have set the CTCSS tones to "off" and the radio head on scan so that I might pick up skip from the east coast. I figured th expensive radio and the full size antenna would pick up alot. So far nothing. I used to pick up skip from the very agency I work for now all the time when I lived in Pennsylvania.

Does the skip travel better east than west?
Is the GE radio in the car less sensitive than a scanner? (I adjusted the squelch to the point just prior to static)

One person suggested that we are at a low point in skip all around, maybe I am just trying at the wrong time.

Please e-mail any responses.

Thanks Steve

the gov. is getting strict on what thay let across the iron curtain. our Iron curtain.
we are more and more an Iron curtain country, as you know it's to protect you as a citizen. some one in our gov. dont wnat you to hear what thay have in mind for your future. the days of fredom of monitoring is over!!!! the natural resource known as the air waves is gone. soon it will be ILLEGAL to monotor above 30 Mhz. by the year 2010, people will be locked up if thay own a scanner. unless you have some type of license or legal permission to monitor.
You will be protected from the people with scanners. as you know scannrs will be as ILLEGAL as a gun in your car. if you have a scanner keep it hidden under the bed out of reach of yong children.
its time for all scanners to burn in the public square.. kinda like books
The goverment sold the natural resorse like the 220Mhz to motorola and the phone compays. I guess thay will sell the Grand Canyon next...
For years the FCC allocated and assign freq. but NO more the govermet sold them for a one time fee........
in one hundred years from now you will still have to pay companies and corporations for the right to use the natural resores our farthers fought for way back in 1934. when fredom was king......
I guess I am crazy but did we just lose some of out fredom in the last 20 years???????????????
no one is burning the constitution in DC. I guess no one cares if it gets lost some where in washington.... not much left of it any way...
I am sorry to be so grim.......

use the formula for antennas/wave length found in any physics book or
book on radio propigation....same wavelength/frequency relationship holds
for light as it does for RF.

divide 300/frequency for wavelength in meters!

tw (twine@intrex.net) wrote:
: To all,
:
: I've read a couple recent posts that boast the RS #20-014 six foot
: antenna pulls in cordless calls up to 2 miles away. If others have had
: this success please let me know! I'm using the RS #20-013 discone on the
: roof and have never been that happy.
:
: I bought it as a newbie to scanning and then months later talked to a
: knowledgeble RS manager (I know, it sounds impossible) that told me the
: problem. I had carried in a copy of Grove's catalog and he pointed out
: the difference in the one they sold. RS discones have no vertical
: element! We spent half an hour trying to calculate the length needed for
: the 46 MHz range and I'm not so sure we got it right. We used a formula
: I don't remember that divided the freq by some constant?!
:
: Anyway, I added the verticle element with my best calculations.
:
:
:
: My questions to all are:
:
: 1: What IS the exact length needed?
:
: 2: Should I just replace the whole thing with the six footer?

Laws change every year. All you need now, is to know your callsign.
You can broadcast even before your license comes in the mail, you can
now find your callsign on the FCC database.

>
> As for a cop not being able to ask for your ticket - this is not true.
> You are saying a local cop (or state - whatever) has no authority to
> enforce a Federal violation.

That is correct. When did you ever see a cop go to a radio station and
arrest the DJ for not giving legal ID on the hour? Radio is enforced
only by the FCC, Airplanes and laws are enforced by the FAA. A police
officer has NO AUTHORITY to demand to see your Amateur Radio License.

>
> If the cop is investigating a situation that involves you transmitting
> on, what he believes, a ham radio - he can certainly ask for proof

This is bullshit. The FCC doesn't issue traffic tickets, and police
don't enforce radio violations.

>
> In some states, you are allowed to carry a handgun concealed with the
> proper paperwork. If the cop sees that you have a gun, do you think

> he'll ask to see your handgun license?

This is such a stupid statement. Of course! Would you see an FCC officer ask for your handgun license? Of course NOT! What is your point?!

I'm interested in buying the Trunk Tracker. Is this scanner any
good at what it does ? Does it have a lot of intermod or birdies,
like Unidens scanners of the past?

Rich

Look, I am tired of arguing and teaching everyone law. My state laws
say it is illegal to wear a headset in a vehicle UNLESS you are a
license Ham Operator. I don't give a shit whether you choose to believe
in this law or not. This is not something you and I can DEBATE! The
law is written very clearly. If you hit a car with your truck, then YOU
are breaking the law! Blowing a horn before you ram into someone does
not put the blame on the victim! Do you even have a drivers license?

Lord Nymon <soldeed@scarlan.com> wrote:

>Radio is enforced
>only by the FCC, Airplanes and laws are enforced by the FAA. A police
>officer has NO AUTHORITY to demand to see your Amateur Radio License.

In the case of the FAA, under current rules. As a licensed pilot you
are required to produce your relevant certificates (FAA medical
certificate, aircraft registration, etc), to any of the following:
1. the director of the FAA or his/her representative.
2. the NTSB (or any representative of)
3. ANY federal, state or local law enforcement officer.

If they request to see it, they are entitled to it, under the present
law. Granted, unless you crash your airplane into the local farm field,
a local pig has no business being at an airport hassling you to see
copies of your certificates any more then the NTSB would if there has
been no accident or incident involving your aircraft.

Just setting the record straight...so like it or not, when it comes
to the FAA example. Yes, a local LEO does have the authority to ask to
see your paper work....

Now as far as the FCC thing goes ... you got me ... is there anything
in the regs that say a licensee is *required* to produce station and/or
operator licenses on demand to anyone ? (if so, who ?)

To Whom it may concern at NorScan

Myself and all the scanner users of Australia would greatly appreciate it if you would stop posting advertisements in aus.radio.scanner.

None of us live in Norway, none of us can pick up radio transmissions from Norway (except maybe HF) and I'd guess that not many of us can read Norwegian.

So for these reasons, I do not think many of us are interested in your pages, or your group.

I ask you again, politely, to please stop posting to aus.radio.scanner.

Surely common sense would tell you that Australians are not really your target audience.

Thank you.

Hello,

These things are well known vaporware packages, offered all over the
world for all sorts of prices.

While theoretically they could work in the remotest desert with no
co-channel users to limit your range, you would need substantial
outdoor antennas on the base and antennas and power on the mobile.

Not practical. And certainly not legal in the U.S.

Money better spent on cellular, understanding the limitations of that
technology.

While this has been a fun little chat... the bottom line is..

Inside antennas suck... antennas inside metal buildings
suck real hard.

For joy, happiness and harmony in receiver antennas
1. outside
2. up high (watch for wires and lighting)
3. wide-band pre-amp at the antenna

I ordered Radio from canada. It not come in mail. Company sent message that "USA authorities" did take radio because it is not legal to mail to US. They have come to my home and asked myself and wife question about radio, and if I own more radio. I say no but they want to look around. I am pissed.

Most people don't post a controversial story and then some time later post under another name with the same "look what is happening in this country" story as if they were somebody new. No don't ask but when you ignore a number of requests questioning it don't whine because it makes you look like anything but up front.

> What is it with you constipated people? I related my 2 stories just to

like
> you....

I never sent you E-mail Paul or Willy or whoever you are. I am sure you got lots when you made the offer to come up with case numbers and such if people E-mailed you. I am sure you got even more when you failed to come up with them.

>I don't need to be harrassed just because you have a hair up your ass..

Seems that you are the one with a problem Willy or Paul or whatever your name is. I guess you call questioning your tale harassment ehh? What do you expect when you only post the facts you care to reveal and ignore those that want to verify your claim. Come now, get real there Willy or Paul or whatever.

Very nice post and find! Thanks.

They are missing a few commands:

CMD SUB Operation
07 many Select VFO
08 -- Select Memory Mode
08 mc Selects Memory channel
09 -- Memory write
0A -- Memory channel -> VFO
0B -- Memory Clear
0C -- Reasds offset freq.
0D -- Writes offset freq
0E ** a bizillion sub commands for IC-781, IC-R900 IC- R7100

Probably not on their list 'cause they are not implemented.

cheers

I'm wondering if there's way to wriggle out of this: Assuming you paid for the scanner with a credit card, you could say to the card issuer that the merchant never delivered the item to you and therefore, you want the bill removed from your account. Simply say to Durham that you don't intend to pay for something that you did not receive and they wil have to work it out with Customs to get their scanner back. Usually, when there is a dispute between the customer and the merchant, the card issuer will go to bat for the card holder (i.e. the customer).

An unblocked, new AOR8000 for $410? What's the catch? I've seen them selling for $600 and higher new (at least from stateside vendors). Also, I was under the impression that you couldn't find a new scanner at the moment. I'm unsure of the precise reason for that but I suspect it has something to do with the fact that the scanner is easily reprogrammed to receive cell...

Durham merely has to tell the card company that the buyer was trying to circumvent the U.S. law so he did it at his own risk.

WRONG! A police officer can ask to see a ham license if he/she is enforcing state/local ordinances/law. He is not enforcing FCC law, just verifying that when one says they qualify for exemption from such law/ordinances (in the case of a ham in posession of such equipment in vehicle where deemed unlawful by state/county/city law/ordinance).

I think a criminal justice freak would have figured that out. You are telling me that a law officer doesn't have the right to ask you proof of license to verify you are what you say you are? Get real. Think logically before you start to flame.

Again, same thing goes for someone who gets stopped with a "banned automatic weapon". If the suspect says he is a Federally licensed firearm dealer, you are telling me the cop is enforcing Federal law? Get twisted. He is merely verifying the guys story that he is a Fed licensed firearm dealer.

How will he enforce it? Probably by suggesting that the neighbor call the FCC! The police department doesn't have the equipment or knowledge of how to prove that the interference is actually coming from your radio. How could they just assume that the interference is from one house, and not another?!

>
> Now, in a situation like that, why not do the officer the courtesy of

What if you don't HAVE the license?! You are not required to carry your Ham license with you anymore!!! I don't carry mine!! I don't HAVE to! The FCC can tell if I am licensed or not by my Call sign, and a police officer has no LEGAL RIGHT to ask to see it.

>
> The same argument goes for the mobile scanner debate. If your state

16-jul-97

Hi..

I just got a Trunktracker and have a question on using it for conventional scanning. Is it possible to restrict it to selected banks? or does one have to scan all 300 (10 banks of 30 channels) and lock-out the frequencies you wish to skip??

It works well in trunktracking mode, but it's a bit of a pain to use for conventional scanning. I'd like to have a bank dedicated for RR scanning freqs, one for aviation, etc...

Any help would be appreciated. Thanks in advance.

Doug

>You are a HAM?! And you are arguing the laws (that you are supposed to
>know) with me?! You are required to KEEP UP with changes in the law
>pertaining to Amateur Radio! How else can you operate LEGALY?!

The point you're missing is he was telling you a real world scenario.
If you think you can snub your nose at a police officer who asks for your
ham license, you are right. However, since you cannot PROVE at that moment
you are legally allowed to operate that in your vehicle, the officer has
the ability to confiscate it until you provide proof. This is his
responsibility, to prevent a possible crime for continuing to occur.
Sure, you'd be right......but very inconvieneced, and legally at that.

The list of CB Shops is finally available for your shopping &
repair needs
all over the nation.
CB Shops listed from East to West and North to South are available
and
ready to address your needs. Some carry hard to find equipment, and

some carry wholesale parts & equipment.
Whether it's a brand new radio or an old tube type amplifier, your
chances
of finding what you need are much greater and faster with this
brochure.
Use this brochure to shop & compare to enable you to buy at the
best
prices, or to compare what ever prices on labor, etc.
Will save you time and hassles of trying to search the information
by
other means and in the end will more than likely save you some
green$$$$$.
This brochure is LOADED WITH OVER 60 names, addresses,
and telephone # 's of
different shops, shacks, and even, shops on wheels.

This brochure will pay for itself with the time it will save you
in searching
for that one shop that can accommodate your specific needs.
You won't want to miss out on the next great deal !!
Here's how to get your copy of this, fast selling ,
brochure..........

Send $2.00 cash, .32cent stamp , and of course, your snail mail
address
to.......

Hi folks

I am well satisfied with my broad band receiver MVT 7100 which I intend
also to use for shortwave. I have two questions:

1. Is there a possibility to get and build in better
filters? The receiver has a bad selectivity.

2. Has anyone a circuit drawing of this receiver?

Please Netmail

Thank you very much in anticipation

Roland HB9BQR

1571. Re: Dayton Airshow Freqs

Newsgroup: rec.radio.scanner
Date: 1997-07-17 00:00:00 UTC
From: jtward01@aol.com
Message-ID: <19970717125000.IAA02656@ladder01.news.aol.com>
Source record: 191393

Jed,

Here are your Dayton Air Show frequencies. Btw, about a dozen or so scanner users from across the country are meeting for dinner after Saturday's air show. You're welcome to join us. We'll be at the Ryans Family Steak House on Little York Road between 5:30 p.m. and 6:30 p.m., depending upon when the show is over and the traffic congestion. None of us have ever met except over the Internet, so you won't feel out of place. Of course, your family is invited as well. This invitation goes out to any other interested scanner buffs attending the air show as well.

Airshow officials (KB31054) 461.1625/466.1625; 461.0875/466.0875; 461.4625/466.4625; 461.8875/466.8875; and 462.1125/467.1125.
Twenty mobile units are licensed to each frequency pair, although a recent change in FCC regulations allows additional units to be added without notification. The lower frequency of each pair is likely to be the base station or repeater frequency.
Most fire and EMS communications during the USATS are on the Ohio statewide mutual aid frequency of 154.280 with 155.160 used as back-up.
Law enforcement during the airshow is the responsibility of the airport police department, with assistance from Wright-Patterson Air Force Base security forces, the Montgomery County Sheriff's Office, the Ohio State Highway Patrol and several commercial security firms.
Airport police & fire units use the city's 800 mHz trunked system.
Other agencies that can be monitored include Wright Patterson AFB security on 173.4735 or 173.5375; the Montgomery County Sheriff; the Ohio State Highway Patrol on 44.74 or 45.01; and the Vandalia Police Department on 854.9875.
Although exact frequencies for the U.S. Air & Trade Show won't be assigned until mid-July, the following are frequencies commonly used across the country for air show control.
Common air show control frequencies are: 123.4, 122.9, 123.45, 122.85 and 122.775.
Other aviation frequencies in use in Dayton include:
Dayton International Airport - tower 119.90/257.80; approach control 118.00/327.10, 126.50/324.50, 118.85/294.50, 124.65/316.70 and 134.45.
Wright-Patterson AFB - tower 236.60, 289.60, 115.20 and 126.90; weather station 344.60; pilot to dispatcher 372.20/122.85; and the command post on 397.00.

Dayton International Airport
FREQUENCIES: Dayton 800 MHz. trunk system plus 852.0125/807.0125R (WNLN241).
Also uses 453.275/458.275R (KSV843) for special events, etc.
SECURITY

UNIT NUMBERS: Base I.D.'s as "Base 10" with officer numbers unknown.
FIRE DEPT.:
UNIT NUMBERS:
901 - crash/fire truck (also I.D.'s as C-23)
902 - crash/fire truck (C-22)
903 - Fire Chief (C-15)
905 - crash/fire truck (C-20)
906 - telesqurt (C-21).
Base I.D.'s as "Base 20."
EMS: Airport FD provides first aid/first responder with transport by
Butler Twp. or Vandalia paramedics.
MAINTENANCE: Uses same frequencies and callsigns. Believe names used in
place of unit numbers
Dayton Airport Subfleets on the Dayton TRS:
856-860.2125
856-860.4624
856-860.7125
856-860.9625
400-1 Airport Maintenance
400-2 Airport (use unknown)
400-3 Airport Security
400-0 Airport (use unknown)

Quarter wavelength vertical would be 6.4 inches. Try 234/wavelength
to compensate for end effects.
Good Luck,
Jeff J.

Just go to Radio Shack and get a cigarette lighter adapter with the converter on it (about $7 or $8 I'm not sure). I have one in my truck. As far as the neg. polarity, the one I have has a plug on the end that can be turned around to work properly.

If you like to build stuff, you could allways build your own
regulator...you need a cigarette lighter plug, a 100 uF cap, a 1000 uF
cap and a 7909 regulator (you could use an old 7908 if you have one
laying arround).....

I thought the cell restriction was only for models being shipped in the US. You
may be able to buy any new scanner in Canada and not have to do anything.

Anyone else know?

I work at McDonalds. Our transmitter is also located on a Business band. We have people from the car dealership coming through w/ their radios and they always listen to us and sometimes cause interference. I also question them if they caused the interference that just happened and it never happens again. Try a Radio Shack business radio.

>pertaining to Amateur Radio! How else can you operate LEGALY?!

By also keeping up with the other laws that affect you as a citizen of
or resident in or visitor to the USA and to whatever jurisdiction you
happen to be in. Your ham license does not override your obligation
to obey the Vehicle and Traffic Law wherever you happen to be driving,
or nuisance ordinances wherever you happen to be at the moment, or any
other Federal, State or local law that applies to your activities.

If a local law conflicts with Federal law, it may be invalid, but it
is still enforceable until a higher court overturns it.

: Just go to Radio Shack and get a cigarette lighter adapter with the
: converter on it (about $7 or $8 I'm not sure). I have one in my truck. As
: far as the neg. polarity, the one I have has a plug on the end that can
: be turned around to work properly.

: Don Baker

I already have the coverter - but - for my Uniden scanners I "hard
wired" a cord to the fuse panel so I could power the scanners directly.
Nice clean way to run the scanners without anything dangling from the
cigarette lighter. What I would like to do is build some kind of voltage
regulator to plug into the 12v cord to power the scanners.
As far as the polarity goes, the Uniden have the ground on the barrel
of the plug. With the + on the barrel (outside) it is very easy to
blow fuses if the cord comes in contact with the car frame (ground).

Although - from the previous post - would it "kill" the scanners to
power them right off the car batt. Only problem is I believe it
sometimes can be more like 13+ volts than 12.

Any other thoughts/comments would be appreciated.
thanks
bill

Hi, Barry:

Naw, keep the Bearcat 210! Its a old work horse!

I still have my 210-XL, which I bought in 1982. Its right here in my office and works great. Of course, it only stores 18 channels and the scan speed is slow, but it works great. Though its no comparison to my main scanner (Pro-2006), its still fun to have around.

As for a manual...contact Uniden in Indianapolis as they might still have them for sale..But if not, try contacting Grove http://www.grove.net/ or G&G Communications: http://www.iinc.com/ggcomm
The might be able to sell you an old manual.

I can't give you any advice on the Pro-2021, as I'm not familiar with that radio.

Probably not. I don't wear hearing aids, so that part of the law doesn't pertain to me. Why don't you look it up for yourself? Then you can't argue with whatever answer I may give. Of course, that will probably take all the fun out of the discussion.... :-)

In 1991 or 1992, I was convicted of posession of a scanner in MN. It was a great incentive to get a Ham License. On the advice of my uncle* I told the judge that given the circumstances, he should only fine me $35. Amazingly enough, that worked. I was able to get the scanner back, but it was a pain.

I had to pay $25 to get a copy of the police report. The officer noted the fact that I also a had a shortwave radio, and claimed it could be used as a tramsmitter. What an idiot. *sigh*

I now live in WI :)

Question - if it is illegal to have a radio, capable "of recieving police emergency frequencies"(or somehting like that), in a motor vehicle, how do you get it home from the store :)

* My uncle is a St. Paul lawyer dealing in Civil law.

Two problems with your statement YOOPER.

1. He said he would E-mail the details.
2. He related 2 experiences under two different names. It was his choice to post these stories so if people pry into his personal business then he has only himself to blame.

I have copies availible of the MDTSTUFF, TRUNKER, and MOBITEX programs as originaly anonymously posted here on this newsgroup. In the past five months or so, over 1300 copies of trunker.zip have been downloaded, all including the original source code. Point your web browser at ftp://ftp.netcom.com/pub/so/source/index.html

>Also, I have NO SOURCE for V3.0 of the program, as I was sent only an
>EXE file, and an HTML file which you see when you click to download
>V3.0.

I'm sorry to hear that. I thought maybe you had some way to contact whoever it was who did the updated version. I can only hope that they will see this exchange, and see fit to make the source code available as did the original author. Otherwise the anonymous updates, although nice, are pretty much of a dead end for users, who have nowhere to go if they have problems with it or want to make further improvements.

When lord@heaven.com posted the mdt stuff code, he explicitly requested that modified versions always include the source code so that others might also learn and add improvements. Too bad the trunker code did not include the same request, or better yet, incorporate the GNU Public License. But, since he did prohibit making money off it, I see no real reason that someone would want to withhold the sources for their updates. Of course, since the author is anonymous, that's all on the honor system and unenforcable.
Anyway, that's my $.02 worth.

Leave the poor guy alone...all he was doing was relating an experience. I
can understand why he didn't give detailed information, I wouldn't want
people prying into my personal business.

WRONG!

97.9 Operator license.
- (a) There are 5 classes of operator licenses: Novice, Technician,
General, Advanced and Amateur Extra. An operator license authorizes
the holder to be the control operator of a station with the
privileges of the operator class specified on the license. The
license document or a photocopy thereof must be in the personal
possession of the licensee at all times when the person is the
control operator of a station.

Pretty clear to me. What you are referring to is that you may begin
operations as soon as you know your callsign. You MUST retain, in
your possession, your CSCE - proof that you passed your test(s).

- (b) A person holding a Novice, Technician, General or Advanced
Class operator license who has properly filed with the FCC an
application for a higher operator class which has not yet been
acted upon, and who holds a CSCE indicating that the person
completed the necessary examinations within the previous 365
days is authorized to exercise the rights and privileges of the
higher operator class.

The same applies to a person who has upgraded. He must retain, in
his possession, his old license as well as his proof of passing his
upgrade test(s).

You would do good to get your own copy of Part 97 or visit one of
these web sites.

Pro-2004 scanner in excellent condition with operating manual and service manual. Backlight works great.
Has the 400 channel mod, fast scan mod, and receives cellular. Full coverage from 25 to 1300 Mhz.

Asking $225 obo.

For more info email me at: philipc@erinet.com

1615. ARRESTED for reading ARRESTED FOR 902 MHz!

Newsgroup: rec.radio.scanner
Date: 1997-07-17 00:00:00 UTC
From: Mindless Mass <mindless@mindsprung.com>
Message-ID: <33CEE627.7E8B@mindsprung.com>
Source record: 191487
Cross-posted to: alt.radio.scanner,rec.radio.scanner

This is INDESCRIBABLE. While peacefully minding my own business and reading messages here on the newsgroup last week at about 11:02 PM, my DTMF decoder box suddenly sounded an alert tone. It seems that Win'95 detected that I had reached an anti-government usenet article entitled "ARRESTED for 902 MHz!", snatched up my other data line and quickly dialed a "snitch" line of sorts. Because my DTMF decoder has a built-in two minute delay before beeping at me over a dialed number, I was unfortunately not able to see what had happened until it was too late.

By the time I had completely formatted my hard drive and packed my bags in a hurried effort to escape, the screeching of sedan tires outside my apartment complex was audible. Within seconds, 15 federal agents broke down my door without a warrent, confiscated my computer, and then demanded anal sex. I was thereafter cuffed and taken to pellican island without a trial. It turns out that Win'95 had fabricated a secret microscopic hard drive within the plastic casing of my computer via technology made available through Area 51 research and transferred the entire content of my hard drive to it before I had a chance to format.

The feds found everything; my love letters to the easter bunny, my pickel brine sandwitch recepies, and of course, a Forte Free Agent-cached copy of "ARRESTED for 902 MHz." According to the senior arresting officer, it was this infraction of the law (spying on law operations or what not thru usenet hackers) that was responsible for my incarceration.

Well fortunately one of the prison wardens decided to let me go, and I ended up getting my computer back because the feds' warehouse was already packed full of other people's confiscated computers and scanners. They just didn't have any room for mine. But, it has been a terrible experiance. Ever since I told my boss about this, he's called me every day to remind me that I've been fired. My wife left me, my kids think I'm gay, and my dog throws up every time it looks at me from within its hideyhole. This is a lesson to be learned. Don't read "ARRESTED for..." messages, as it might just spell the end of your happyness and ... life!!

No... YOU need to get an UPDATED version of the rules!!! Take a look at
the date on this set of rules you have!! They change EVERY year!!

The above is OUTDATED!! You do NOT need to have a copy of your license "at all times" as stated above!!

I have a copy of a law that doesn't allow blacks to vote. Should I post that on a newsgroup too, and tell every one that it is illegal for Blacks to vote? Get a CURRENT set of rules, or better yet, just subscribe to QST magazine, they publish the new laws and changes EVERY MONTH! It is the responsibility for all Ham operators to keep up with law changes, or end up breaking some law down the road.

Some Hams still beleive it is illegal to order a pizza over the repeater's autopatch. That law has been relaxed. You can now do this.

KEEP UP TO DATE!! DON'T QUOTE OLD EXPIRED LAWS!!!!!

Why don't you give it up! No one talks to you except for me anyway!
Most Hams know that you are NO LONGER required to carry your license
with you anymore!! (for a few years now)

Explain why a police officer would ask to see your Ham license if the
law states you don't need to carry it, and explain how you are supposed
to show it to him when you DON'T HAVE IT ON YOU?!?!?! This is the last
time I correct your mis-information.

Everyone ELSE ignores you, and now I will too. I heard someone else
say they were going to put your personal information to good use!! So
you better stop harrasing people!!

The whole point of the Federal law (the reason it was WRITTEN) was to
overrule all the stupid state and local laws that were affecting Hams.
A local law (such as in California) that allows you to buy and smoke
pot, does no good as the federal law will not allow it, and over rides
it. This is unfair, but we are not speaking of fairness, we are talking
about the LAW.

A DEMOCRACY IS 3 WOLVES AND A SHEEP VOTING ON WHAT TO HAVE FOR LUNCH.

An amateur license does not authorize you to import unapproved radio equipment. Even commercially manufactured amateur equipment (Yaesu, Icom, Kenwood, etc.) has to be approved by the FCC for import to the U.S.

Sounds like you were being lawfully detained by police. If you had just
handed your licnese over to Officer Wiley and not insisted on him
finding a Federal Marshall you would have probably been better off, and
on your way a lot sooner.

> Like I said before, I treated the officers with respect and not only that,

Cops should not be concerned people dressed in young republican
costumes?

I would say that your respect for the officers was marginal. Perhaps
you didn't call them names but you could have been more cooperative.
What does your clothing have to do with whether or not they have a right
to ask you about your radios?

It seems to me a standard VHF TV antenna should work well for 46Hhz.

The low end frequency range of the TV VHF band is channel 2 or 52Mhz and
46Mhz is just below this.

Just a thought........

Source record: 191253

April 18, 1997 while band scanning from 902-928 MHz, a Amateur Band that I am Licensed to Transmit and Receive on.

A conversation was taking place on 902.517 MHz, didn't pay to much attention to it because the signal was very weak. On the second band scan the frequency locked in on 902.517MHz, the two individuals talking I knew personally, the Sheriff & Undersheriff of the County that I live. Oh-by the way I am a Deputy Sheriff (past tense) in the same County. Assuming they were transmitting on a Radio with the short length of the conversation, unclarity, signal strength near nill, and the contents of the conversation being a very unprofessional and degrading regarding my coworkers I proceeding to question the conversation with another Deputy.

Later on that evening at approx. 2:20 am (12) Police Officers, State Police, Sheriff, Local Police, (NO FCC AGENTS) came to my residence with a Search Warrant for Wiretapping Equipment. When I questioned them, low and behold what I was monitoring was a piece of a CELLULAR PHONE CONVERSATION. They left my residence with my Computr., Disks (presuming I had hidden waves files or Telephone tapping capabilities throught the Computr) and a Scanner (which by the way is pre 1994). Just before they left my residence I did question who had the authority to enforce FCC Laws they all replied they did. Which of course we all know is untrue. But the HEAD HUNT WAS BEGINNG!

Several days later I received a call from the State Police requesting my presents regarding a Warrant for my Arrest.

Charge #1. EAVESDROPPING on a Common Carrier and did wilfully use a device to eavesdrop upon a private conversation, without the consent of both parties; contrary to MCL 750.539c; MSA 28.807(3).
Felony: 2 years and/or $2000.00 fine.

Charge #2. EAVESDROPPING-DIVULGING INFORMATION obtained from a Common Carrier did use or divulge information that he or she knew, or should reasonably have known, was obtained by eavesdropping in violation of MCL 750.539c; contrary to MCl 750.539c; MSA 28.807(5). 750.539E
Felony: 2 years and/or $2000.00 fine.

Contacted the ARRL regarding the above matter-NO HELP WHAT SO EVER. They state that I could not be charged with what I was charged with and GOOD LUCK.

HELLO! ARRL I was charged! Have been Arrested!

I thank the ARRL for all the Legal Help they brag about-which by the way is NONE!

They will not receive any further monies from this dude.

Contacted the FCC dozens of times via e-mail, certified mailings and telephone.

Everytime you contact the FCC by phone they state I can not be charged but when request them to put it writting for the case at hand you receive NOTHING!
Sent (3) Certified letters to the FCC Office of General Councel-up to this date NOTHING! Typical Government Agency!

Now you may ask fight this out in Court-yes I would probably win hands down.
But do I have $30,000 dollars to prove a point that nobody believes can happen or will never happen to. I think not. Already have half that amount tied up in this BULLSHIT!

Getting off the subject for a moment-Contact that FCC and question them if the Standard Tri Band 5900 or the Yaesu 50 or 51 HT are legal to have in a mobile or to monitor the frequencies that have been APPROVED BY THE FCC in the first place for the Radios. You know what you will receive from them? either they do not know or NO. Good luck to all the Amateurs in the Country.

Now back to the subject-end result I accepted a Plea Bargain, Forced Resignation from my work place, No record. Total costs to date-well lets just say enough to purchase a home in some areas.

If anyone thinks the above is enough and really wants to stand behind me on this issue I will be more than glad to forward the addresses of my local Judge and Prosecutor and have them flooded with mail and protests.

This just about raps it up folks, just remember the burden has been placed on you to distinquish what you are listening to, and all the FCC Laws, ARRL hype, permits and etc. are out the window. Sure you can win the cases but is it worth the money?

Remember the FCC is putting there stamp of approval on Scanners and Amateur Radios on what Frequencies they can have in them for receive, but in turn are passing Laws making it Illegal to Monitor them. Just like in this case - You are banded by law to monitor Cellular Phones, Cellular Phone Bands are 860-896Mhz that is what the Law covers. Go Figure!!!!!!!

Please excuse any spelling errors or whatever, middle of the night you know!

Bye
The Eavesdropper :)

1626. ARRESTED for ham CASE NUMBERS!

Newsgroup: rec.radio.scanner
Date: 1997-07-18 00:00:00 UTC
From: "Paul \"Willy\" Racine" <racine@ibm.net>
Message-ID: <01bc9329$eb0ef720$9bca2581@willy>
Source record: 191254

Well, I finally found my case folder and wiped the dust off the papers.
No, like I promised, I will post the case numbers and pertinent information
that all of you are dying for. The reason fo rthe delay is that I have a
job, and my life does not revolve around the computer, so I can't jump the
second I am requested to...wish some of oyu guys had more patients.

Here is the case as it actually happened, now that I refreshed my memory
(it's been almost 9 years already!):

This is quoted directly from the POLICE REPORT:
"On 12-23-88 at 1:50 AM, I observed a vehicle whose side and rear windows
were completely covered with snow and ice [aside: it was raining freezing
rain that night and my windows iced almost immediately after scraping them.
The roads were also very icey and I was driving slowly (about 35 MPH) in a
55 zone. I have a copy of the weather report from NOAA verify the fact.
Send a SASE and I will mail you a copy]. I stopped it on US 41 near Cooper
Lake Road and issued the driver ticket #9287 for obstructed vision. Upon
handing the driver the ticket, I heard a scanner in the vehicle that was
picking up the primary police channel [aside: Sorry, I was mistaken
before...I was infact scanning the 10 memories on my Kenwood TR-2600
handheld transceiver. One of the memories was programmed with Central
Dispatch. However, I have not broken any law at this point]. I then keyed
my microphone on my portable radio a few times and heard the scanner pick
up the transmission. I then asked the driver to step out of the vehicle.
I then observed a scanner lying on the seat. It was connected to an
antenna on the car. I asked the driver to show me the proper paperwork for
the scanner. He said that he had a General Amateur Radio License and that
he was authorized to have the scanner in his car. I asked the driver to
show me the license and stated that the only law enforcement officer he had
to show it to is a US Marshall [aside: so far so good. No problem, yet.
I requested a Federal US Marshall to the seen, because I WAS NOT about to
surrender my FEDERAL license to the officer, however I did show it to him
as I held it, but did not give it up until the Marshall arrived]. I then
placed the suspect in my patrol vehicle after patting him down for weapons.
I then had OFFICER LOVELACE come to the scene [aside: LOVELACE was the
FEDERAL US MARSHALL at the time]. He is also a Deputy US Marshall. The
suspect then showed Officer Lovelace the license. Lovelace then went back
to the station and read the statute concerning scanners in the motor
vehicle [over the radio]. After reveiwing the statute both Officer
Lovelace and I felt that the suspect was in violation of the statute [this
is where personal opinion starts to play a factor...both officers DID NOT
understand the wording of the law and it was up to me to convince them
otherwise...one-on-one]. I then removed the scanner from the vehicle and
had the suspect go to the station. At the station the suspect showed us a
card that stated he was a emeber of the Civil Defense Radio Amateur Civil

Emergency Service, State of Michigan (RACES). The card was blue and was a Michigan Department of State POlice form EMD-9 (REV. 5-84).'

"The suspect stated that he did not know that he had to have permission from the Commission of Michigan State Police to have a scanner in his vehicle [I didn't know I had to have a permit, because in fact it WAS NOT require because I held a current Amateur Radio License which, according to the law, satisfied the law...so far I did not break any laws]. He did not know whether the RACES card was the proper form [because in fact the license was the proper form, not the RACES card...but I presented the RACES card to further convince the officers that I was legal!]. We then called DEPUTIES ZUBA and BELISLE to the station to see if they knew what the form looked like. They in turn called LT. ZORZA [who, BTW, heads our RACES group] from the Sheriff's Department and he stated he believed that the RACES card was the proper form. I then gave the scanner back and released the suspect [by now it was about 7AM--they held me in the holding-room for the entire evening, against my will]." Signed Officer D. Willey.

Like I said before, I treated the officers with respect and not only that, I was wearing I shirt and tie that evening, and I am well groomed with very short hair, so I did not LOOK like a punk. So there was no reason for them to be suspious of me.

The POLICE REPORT continues:

"12-29-88, 11:00 AM Mr. Racine was arrested on a valid misdemeanor warrant for possess police radio, receivers, scanners. He posted the $50:00 cash bond and was released after being printed [and photographed]." Signed Officer G. Sibley.

So, you see, this IS the truth! My charges were dropped during the first week of February (I thought it to be closer to the end of the month, but I was wrong). This is AFTER my attorney send correspondence to the courts asking what validated my arrest. I paid for the attorney.

Okay, now, if you would like to look this up yourself, here are the CASE NUMBERS, etc:

CASE NO: I 88 700 SM
AGENCY: Ishpeming PD
COMPLAINT NO: 1708-88
DATE: 12-23-88
STATUTE: MCL 750.508
STATE: Michigan Judical District 96th Judicial Circuit Court
COUNTY: Marquette

Do you need more information? I believe I gave you all that I have. Thank you for BELIEVING IN ME!

Sincerely,
Will

It is a choice of the veiwer not to read ARRESTED postings, but some of us are VERY interested in hearing what I and Mike have to say about their case.

[this is directed to all readers] The case information is currently being posted on the net for those of you with little faith (this information takes time...we have to get our paper work in order).

Thanks for your patients, people.

Some antenna's have whats called reflecting elements or tuned elements
that relect the signal back and in the correct phase on to the main
element. As a result there is gain. That's how it works.

Can someone give me a good idea on a decent whip antenna for my Uniden Trunk/Tracker ? I really think there is an Atenna out there that would out-perform the standard Whip that comes with the T/T.

Let me know what you think, and where I could get one!

Thanks!

No, listening to cordless phones is NOT illegal. Cordless phones are a part 15 device, which means they must deal with the woes of being a piddly-milliwatt no-license required device.

This goes for 900MHz models too. Despite the fact there are laws pertaining to CELLULAR mobile phone monitoring, listening to home cordless phones on 46/49 and 900MHz is perfectly legal in the US.

They updated ECPA to include cordless phones as well as cellular. They
didn't add the requirement to block cordless reception on scanner (
would have been ludicrous, considering how easy it is to hear most
cordless phones with another similar phone, or a baby monitor.) Your
buddy is right.

Source record: 191273

Andy,
So in other words: Don't reapeat what you hear on your assigned frequency! Give me a break-it is a Amateur Band..I could have taped and rebrocasted it.. The Moral of the story is the government has put the burden on the general public to distinquish what you are monitoring, which by the way there is not a expert in the world that can distinquish by listening to a transmission and tell you what they are transmitting on..
KEEP THE CELLULAR PHONES ON THERE ASSIGNED FREQUNCIES-PERIOD or BETTER YET FORCE THE CELLULAR COMPANIES TO SCRAMBLE..
Think about it Andy the FCC approved the 900MHz band for Monitoring-correct! And banded the Cellular Band-Correct!
Then in turn after approving the band for monitoring in all actuality your not to monitor it! Ya OKAY! If you stop living in a shell and start sticking up for your RIGHTS in this country you wouldn't have these problems.

Other issues: A Amateur radio operator arrested for RF on Cordless phones, arrested and sentenced to 30 days in jail. ARRL was no help, neither was the FCC.

Another Amateur Radio operator arrested for the same as above but fought it to the Supreme Court in New Jersey. He won BUT HOW MUCH DID IT COST THE INDIVIDUAL?

Enough is enough-period!!!

Gee, someone needs to take these types of law to the supreme court. Police/fire/EMS radios are paid for with PUBLIC money, why do the yankee commies in MN think that they can violate the civil rights of it's people by making it illegal to access public information? Only in a country where we have a dope smoking, draft dodging, faggot loving crook for a president like Willie Boy Clinton.

Um, Kevin, we are talking about LOCAL/STATE laws/ordinances, not FCC law. A police officer has the right to request verification of license on someone he/she suspects of violating a local or state law that the officer has been sworn to enforce. The officer is not "playing FCC", they are simply doing the job they get paid to do by verifying one's story when they claim exemption to (what I think are Communist) scanner laws.

How else is a cop supposed to verify the status? Or would you be the holier than thou type to say "no, you can call the FCC and give them my call sign and check it out"- about that time, you are en route to jail.

I don't like this new world legislation either, but until it gets thrown out, we must obey it- FCC hasn't a damn thing to do with it.

The story Paul "Willy" Racine related is TRUE. As of Friday, July 18, 1997, the case will be closed, so all the information will be public domain.

STAY TUNED! I will post ALL the pertinent information relating to the case.

Boy, Paul sure took a beating from you guys over this story. Paul "Willy" (Willy is Paul's nickname, so there is no secret in his identity, so I couldn't see what the big deal was!) Paul is a honest and fair guy and he had no reason to lie about what happened to me. Paul was UNABLE to supply the specifics because the case was still active, and he was protecting my identity until this case was settled. Paul posted the message just to make a point and let you people know that things like this happen in this "free" country of ours.

73,
Mike

knock, knock....anyone home?

are you serious....no funds, no brains to decipher who to help you?

hey, have you ever heard of the National Enquirer?

hey, have you ever heard of all the other investigative units of television stations looking for news to go for dealing with corruption of our government by the idiots they hire to do work called: we get paid to do nuttin.

here you have people working for the citizens of the USA and when you ask them to do what they are paid to do they go out to lunch....

Gee...you have a story here. You have a movie here.

A novel even should the plot involve the Arabs....

gosh, get yourself someone with journalistic contacts and go for the jugular and get paid for your "upset" and some lawyer out there may even be "smitten" with your plight and risk his fee against winning...then he will collect big-time.

The story is there. Now just tell it and get the public aware of how their rights are imaginary and the people who are there to protect those rights too scared to fight because it may upset the big guy.

bill conduit
etc.

No need to have a HAM license to own any kind of scanner, ownership
is completely and totally legal, regardless of HAM license.

Now, to import....That is another story. Again here, your HAM
license gives you absolutly no leg up on anyone else, importing
of the scanner that will scan or easily be modified to scan the
cellular bands is illegal, in all but a few cases. (IE govt, cellular
company, etc)

All handguns are capable of killing people too, but a certain amount of discretion must be assumed by the owners.

You could have skated very well by not repeating the coversations you overheard, thus placing the "figurative gun" to your head and pulling the trigger yourself.

Education costs, and you just paid...

The moral of the story: When all else fails, keep your mouth shut.

1658. OPTO "SCOUT"....is it really any good? What about radio shacks freq. counter?

Newsgroup: rec.radio.scanner

Looking for the FMP frequency for Pinellas Co. Fl. I know that Manatee/
North Sarasota operate on 45.400mhz (Skyway/DeSoto), but I haven't had
any luck with picking up any Pinellas units. Also, looking for G&F Comm.
out of Pinellas (all of the two units they have) + their freq's.
++++ What channel do Manatee Troopers use (FHP #3 out of Venice does not
dispatch to that county I don't think.

Please respond to the News Group.

Thanx in advance for any assistance.

Also, his story is an impossibility because to have a face to shoot would intail that the police officer had a head which inturn would lead one to believe this same police officer had brains, now we all know that police officers eat doughnuts and drink coffee both are well known to be neurologicaly toxic. ha ha Al

1661. Confiscated AOR8000 UPDATE

Newsgroup: rec.radio.scanner
Date: 1997-07-18 00:00:00 UTC
From: kubla@mindspring.com
Message-ID: <33d12002.43054021@nntp.mindspring.com>
Source record: 191289

Hi again, all!
To bring those of you who may be interested up to date,
shortly after I posted yesterday, Alma at Durham called and spoke to
my girlfriend. She told her Fed Ex had notified them of the seizure.
She offered to refund my $ as an option, and they are going out of
their way to make it right on their end. I haven't heard from customs
at all, don't know if I will... I guess they sent it back to
Durham????
To those who have kindly responded to me via email, much
thanks. In order to clear a few things up, I do know WHY it was
confiscated (it is illegal for AR8k's to be sold or imported into the
US), I just don't know what the legal repercussions could be. I have
gotten email mentioning a potential trial (conspiracy to commit fed.
smuggling violations resulting in long prison terms, etc) but no one
has named names, sources, or examples at all, so I don't put much
stock in it, and find it difficult to believe anyway (but then so much
the gov does is difficult to believe - just ask Kevin Mitnik). They
seized it and it's over, so far as I know. I could be wrong, however,
so cross your fingers for me and be careful yourselves.
* * * I do not know what "ATR limited" means, I was quoting the
message left on my machine by the Fed Ex guy, who I assume was quoting
customs. * * *
I was aware of the AR8000's status in the US, but the research
I did on scanners led me to believe this scanner is the best there is
(I really don't care about cell capability, but I don't want a
castrated I mean regulated piece of electronic equipment). I
wanted one before they stopped making this particular model,
and its particular features were lost forever to the
cell-industry-funded-stampede-of-scanner-paranoia through congress
(Hiya Newt!). I researched purchasing Canadian (thoroughly, I
thought), and the worst I heard were merely "rumors" that the
possibility for the potential of confiscation might exist, but could
not find any particular case of this happening at all - not one name
of anybody who even knew of anybody who had ordered Canadian and run
into customs seizure. Of course, this would happen to me. Anyway, now
you all know someone this has happened to (aintcha special?!?)
Sorry if this seems like a newbie rant, but as a
journalist, I get paid to be paranoid, and I am well aware of the US
gov's (you know, tha MAN's :)) continued rabid invasion into its
citizens rights - i.e. encryption laws, phone scrambling laws,
continued attempts at regulating the net, scanner laws, etc. etc. etc.
(please no debate on rights to privacy versus rights to listen to
broadly transmitted radio waves, etc. - if you want privacy,
scramble/pgp/etc. - don't rely on the gov to protect your very rights

to privacy it constantly infringes on). I realize I missed the boat on getting an AR8000 before it was banned, and I didn't want to miss out on getting one before they didn't exist. That's why I bought a 235xlt 2 weeks ago - just in case TT'ing gets on motorola's big $ hit list. Besides, doesn't banning or outlawing a product automatically increase its coolness factor by 100?
You BETCHA! - not that I wouldn't rather have it be legal, tho~
Thanks again all, and keep any relevant info comin'. I'll keep this news group updated as to any further developments. BTW, I just (30 minutes ago) nailed my first fire call due to my new scanner (the 235xlt) - be in the paper tomorrow. I've had fun with it, and am looking forward to playing with my new AR8k :)
Well, gotta run, I just heard a 10-64.

I E-mailed Uniden about the Undoc'd features I mentioned earlier, this is what I recieved:

Mr. Fowler,
The procedure you mentioned is undocumented for a reason. What you have found is a test mode for service tech's. It is not for consumers. If you adjust anything in this mode you run the chance of locking up your main process. If it is locked up then the unit will have to be sent to us for repair, which will not be covered under warranty.
Thank you,
Mike Hammond

Best software for the OS456/535 at the moment happens to be Probe 3.0.

Whether or not it is "proper" to buy used software, I can't say, but if someone wants to sell it to you and you want to buy it, that's your business. Software publishers, who invariably think they have the right to tell you want to do with the products that you purchase from them, can jump in the lake. If they were as zealous about giving your money's worth--including reasonable tech support in a timely manner--as they were as protecting their copyrights, I would be more sympathetic.

Yeah, right, come to the Netherlands, the land of the free, home of the
brave. Back in WWII, you folks gave up your Jewish citizens to the Nazis,
and even had a camp on your own soil where Jews were held being being
shipped off those those vacation resorts called Bergen Belsen (which is
where Anne Frank and her family was sent to be exterminated).

Your biggest mistake was having the scanner shipped Fed X (or UPS for that matter). I wound up paying customs fees on a scanner shipped via UPS but did not pay anything for a scanner shipped by mail. No doubt the volume of mail makes it nearly impossible to monitor shipments for scanners, when there are some many other evil things to worry about.

Maybe. But all you people who really believe what you're saying about how the law works are gonna be the first ones to run screaming onto the Internet (when and if you get your computers back) about how the gummint's JBTs broke the law!

If you don't want to believe that certain things are illegal because YOU WANT to do them, fine. If you don't want to hear how the government and its law enforcement arms really work because YOU WANT it to be a certain other way, fine.

A few years from now, you can post the case numbers that document your horrible experience with having your "rights" taken away.

You really don't have a clue, do you? Go to
www.ggw.org/nf2g/laws_ny.shtml for CURRENT laws about cordless phones.
In particular, notice the reference to Public Law 103-414 (the
Digital Telephony Act), which amended ECPA to include CORDLESS
TELEPHONES as ILLEGAL TO MONITOR, and which became effective in
November, 1994.

This is the last comment I will make to you about any of your legal
comments. It is obvious that you don't have any f***ing idea what
you're talking about!

The BC 890 is one of the radios being made when the cell ban went into effect.So, there are some which can be modified and some cannot.If you can find and decipher the date code and find that it was made prior to August 94 then it is probably modifiable.Other than that you have to try your luck.I recently bought one from a fellow who told me it was cell modifiable.BUT IT WAS NOT.So he refused me my money back because I opened the case of the radio(which you had to do to modify it).So be carefull.Ira

I noticed in an advertisement for a scanner in QST just this month, that not only the CELL band is blocked out, but now they are blocking out the CORDLESS band of 902-928 (which is also a shared HAM BAND). It wouldn't surprise me if the $^ MHz range is eliminated from newer scanners in the near future.

1686. "Land-line?"

Newsgroup: rec.radio.scanner
Date: 1997-07-18 00:00:00 UTC
From: Sean Brooks <listener@radio.com>
Message-ID: <33D0187A.1526@radio.com>
Source record: 191314

Hi to all,

While scanning PD freqs., we have probably all heard at on time or another an officer in a car (or on foot) ask their dispatcher for a "land-line." I'm assuming that this is similar to a "phone patch" used in amateur radio.

Here is my question:

On say, 2 meters (freq. 146.650, for sake of argument), if someone were to key in the access code to a repeater "phone patch" facility, the ensuing "land-line" conversation would be broadcast on freq. 146.650. Now, a real-life example, needing clarification. An officer of the law, calls dispatch on freq. 460.550 (operations, F-1), and asks for a "land-line." Fine. The dispatcher acknowledges the request (ie. "10-4", "sure", "ok", whatever....). I wait on freq. 460.550, and there is NO "land-line" conversation. I also know that the officer IS INDEED speaking to someone at this very point in time via a radio to telephone link, implimented by some "patch" technology in the dispatch base station.
Right to the heart of the matter now. If the requested "land-line" connection is not broadcast on freq. 460.550 (similar to the above described 2 meter example), then has the broadcast freq. necessarily been transferred to a "wireless land-line" (ie. cell. phone freq.) - I know this protocol is in use. "Patch" (land-line) freqs. exist for particular PD departments, but they're not all that common ... wouldn't you say?
Did I answer my own question? Is the officer's "land-line" connection most likely a "wireless land-line" freq.? Or... a VERY allusive "phone patch" freq.?

I KNOW someone out there has thoughts and/or wisdom on this topic. Shed them, and they will be appreciated by many (and myself) - I'm sure.

Thanks, Sean Brooks

Content-Transfer-Encoding: 7bit

I live in Middletown, NJ and had been monitoring our township police
frequency for the last few years on 155.55. Recently, they put up a new
communications antenna and now the channel went BLANK! What is the
likely scenario?

1. They changed frequency to something else - in this case, does anybody
knows about the new frequency?
2. Go to a trunked system - if they did, am I out of luck?
3. My scanner broke on this frequency - I doubt it since it was working
before they put up the new antenna.
4. They don't communicate with the field any more.

Comments/suggestions are welcome...

- Steve

I came into this thread late but I trust its about this AR8000 getting confiscated.
Is this a common problem? Im about to purchase from a UK distibutor and need to know
how often this occurs. I hear Europe has less problems than Canada. Any thoughts, stories
hints or tips? Thanks

Including (I think) the National Security Agency at Fort Meade/Odenton.
If they ever have a yard sale there you could pick up some pretty nifty
scanning equipment.

I wouldn't have done this, were I in your shoes. The signal you heard
on 902.517 MHz could easily have been IMD. True, you legitimately
heard it on the ham band, under legitimate circumstances, but it
couldn't have been ham activity, so why did you admit to hearing it?
Ham radio operators are not primary users of the 902-928 MHz band.

If this is really the whole truth, and not some elaborate hoax, you
have nothing to fear by publishing these names and addresses on the
Internet. If you have omitted any important features to this case,

you could be sued for defamation of character.

I will gladly write a letter to these folks if you publish their names
and work addresses. I will also write letters to the FCC, the ARRL,
your congressional representation, my congressional representation,
and anyone else who might be able to help.

I have been hearing the BNSF North Branch dispatcher on 161.430 mhz from Seattle. They are sometimes identifying as being on "Stampede Tunnel Radio".

This seems to be a new freq. So far I haven't heard any trains, just the dispatcher.

I keep my Pro-43 in a Case Logic cellular phone case (the one
intended for a 'brick' phone). I've had the '43 for 3 years now, taken
it along on many trips, and it still looks new. People (esp. security
guards) will think you're carrying a cel phone, which can be a
good thing. The case is about $15. I got mine at Sam Goody, but
most any electronics store will have 'em.

The 35.02 freq will be difficult to "break-in" to because not many business radios are left that operate here. The 154.6 is much easier as it is available in Wal-Mart and Radio Shack business HTs. Most Mac's are moving to 900 MHz in busy urban areas because of this. Tell your franchisee that you want new wireless headset systems due to interference which is costing him business, that'll motivate him.

As this is a scanner newgroup, maybe he was using one of the dozens of scanners capable of say, oh, 500khz to 1300Mhz. Or maybe he is using one of the thousands of general coverage shortwave receivers, you know, the one with 100khz to 30Mhz continuous coverage. Or maybe just the regular old ham radios, you know the kind with general coverage receivers, oh, of course you know about those, being a "licensed amateur operator".

Maybe before you spout off about the law, you should know where cellular
mobile telephones are. <G>

823-849 & 868-894 MHz.

I got some questions, how many times did the alleged 902Mhz conversationalists use their Amatuer Assigned Call Signs during this conversation? Being a "licensed amateur radio operator", how many times did the alleged hams unkey the transmitters, or was this some sort of full-duplex amateur operation in this very rare band?

Second, being a licensed amatuer radio operator, how many 900Mhz repeaters, or for that matter, simplex operators in your "listening area" do you regularly hear?

Here in Columbus, their is, or was a single 900Mhz repeater on the air, with 3 users.

Divulging communications of anything other than broadcast and "ACTUAL" amatuer radio communications is prohibited by FCC and most state authorities. And most hams would certainly be aware of things like Image freqs and IF type reception. The term "known or should have know" is broad, but sounds like it just might fit, being a licensed radio amateur .

But they are on 800 MHz also! Yes VHF and UHF abound all over the place there but many departments also use 800 MHz. Their UHF repeaters are very good also. With just a slight band opening we can hear them here in Jupiter, 2.5 hour drive away. They happen to be on a few frequencies we maintain down here.

1733. New scanner law is bad news !!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

Newsgroup: rec.radio.scanner
Date: 1997-07-19 00:00:00 UTC
From: zaax@aol.com
Message-ID: <19970719155400.LAA25729@ladder02.news.aol.com>
Source record: 191148

There is a new law in in Congress that DIRECTLY affects the radio hobby.
Edward Markey (D-MA) has introduced bill H.R. 1964 that will stop new
radios
from picking up a whole bunch of VHF and UHF frequencies. This stupidity
must be stopped or I bet all scanners will be banned in the near future.
Where
these idiots get off telling us that there are frequencies that should be
forbidden
is beyond me. Shows what the power of money can do.
The last time a bill came along like this cellular frequencies got banned.
This
time we have the power of the Net to spread the word. Please let others
know
about this bad law. Also write now to your Congressman and let them know
what
you think of this.

73 Zack Schindler
N8FNR

"They'll get my scanner when they pry it from my dead, cold hands"

The following is reproduced without permission from the Grove Web site at
http://www.grove.net/mtnews7-97.html

++

Date: Fri, 11 Jul 1997 11:33:34 -0400

From: Larry Van Horn <steditor@grove.net>

Subject: Legislative Alert: Scanners Under Attack HR 1964

First I would like to thank my old friend Larry Miller of Monitoring
Times and National Scanning Report for the heads up on this bill that
is moving
through Congress.

I have some bad news that DIRECTLY effects the radio hobby
above 30 MHz. I'm not going to wait on the presses here at Grove to
roll
because this legislation needs to be stopped now before it gets out
of
committee. Should it pass, this bill will end the scanner hobby as we
know it.

Another assault on the scanning hobby has begun by Congress and our dear, dear friend the honorable Edward Markey (D-MA). Markey has introduced H.R.

1964. This bill in section 104 makes major changes to Section 302 (d) of the
Communications Act of 1934 (47 U.S.C. 302(d)). Most of you who are students of the cellular telephone frequency wars should remember this section. If not, let me refresh your memory. This is the section of US Code that prohibits the manufacture of any scanner capable of receiving the cellular telephone bands.

Well Markey has taken this to a new level with H.R. 1964. If passed the new
language would now read:
(a) The Commission shall prescribe and make effective regulations denying
equipment authorization (under part 15 of title 47, Code of Federal Regulations, or any other part of that title) for any scanning receiver that
is capable of:

(1) receiving transmissions in the frequencies allocated to a commercial mobile radio service (as such term is defined in section 332(d));

(2) readily being altered by the user to receive transmissions in such frequencies, or

(3) being equipped with decoders that convert digital commercial mobile transmissions to analog voice audio.

(b) Effective Date of Prohibitions on Regulation Amendments -- The prohibitions contained in section 302 (b) of the Communications Act of 1934
shall apply with respect to the changes made by the Federal Communications
Commission in its regulations to implement the amendments made by subsection

(a) of this section beginning 1 year after the effective date of such changes.

On the surface this looks like a yawner. But let's dig a little deeper into
Markey's bomb shell and see what it really says. What is the commercial
mobile radio service or CMRS?

From Bennett Z. Kobb's Spectrum Guide let's see what frequencies this effects. Comments in parenthesis are mine.
"The FCC is changing the terminology it traditionally has used to classify
radio services. The new terminology is somewhat more opaque. An

essential
distinction is between PMRS and the commercial Mobile Radio Services
(CMRS).

Licensees of CMRS businesses provide for-profit, telephone
interconnect
(mobile and portable telephone or dial-up paging) service to the
public.
"Examples of CMRS include private paging services (except for
not-for-profit, internal paging systems); Business Radio Service
Systems
(anything with an IB designation in the Police Call consolidated
frequency
list folks-Larry); Specialized Mobile Radio (SMR) services (this hits
the
851-866 MHz band and that includes most the comms that the new trunk
tracker can monitor including the majority of the public service
agencies using trunked systems); and 220-222 MHz land mobile
systems, to the extent all of these offer for-profit,
telephone-interconnected service to the public;
Public Mobile Services such as Paging and Radiotelephone services
and the
Cellular Radiotelephone Service the 454 MHz and 800 MHz air-ground
radiotelephone service; the Offshore Radiotelephone Service; most
types of
mobile satellite services; and the Personal Communications Services
(PCS).

"Previously, most for-profit mobile services were called "radio
common
carriers." This term has not completely disappeared from use.

"Recent legislation brought all for-profit mobile radio services
under the
CMRS umbrella. Some former PMRS services were reclassified as CMRS
because they are largely devoted to for-profit service with
interconnection to the public telephone network. In some cases PMRS
and CMRS operations share bands."

Now let's look at the bottom line. Here are the frequencies you will
lose in
any future scanner you will buy if this bill becomes law.

Commercial Mobile Radio Services

1) Private Paging Services

Private carrier paging system (PCPS): 929-930/931-932 MHz

2) Business Radio Services

VHF low band: 30.76-31.24 (9 discrete

freqs)/33.14-33.16/33.40/35.02-35.14/35.18/

35.7-35.72/35.88-35.98/42.96-43.00 MHz

VHF Hi-band: 151.625-151.955/154.570-154.600 MHz

UHF band: 457.525-457.600/460.650-462.1875/465.650-467.1875/

462.750-462.925/467.750-467.925/463.200-465.000/468.200-470.000 MHz

There are also a number of chunks of the 470-512 MHz that will be removed.

3) Specialized Mobile Radio (SMR) Services

851-866 (806-821 MHz)/ 935-940 (896-901 MHz)

This is the only area I see where we can fight this law. Those of you who

have trunk trackers look in your trunk freq book and see how many public

safety agencies have been allowed to invade this portion of the spectrum.

There just wasn't enough room from them in the 866-869 MHz portion of this

band. I see this as the only area we can really fight this resolution, the

publics right to hear public safety agencies (even though the SMR bands are

private thanks to the FCC auctions of the spectrum). The other scary part of

this legislation is that no decoders would be allowed that would decode

digital commercial mobile radio services. Can you say digital Motorola trunk

systems? Wonder how much they donated to the Markey campaign? As I have said

on many occasions and in the April 97 MT article on all this, "follow the

money trail." No wonder Mot didn't care about the 235. It was only a flash

in their pans with this legislation.

4) Land Mobile Services in the 220-222 MHz region (recent reg changes have

turned this over to the CMRS)

5) Public Mobile Services

A) Paging and Radiotelephone Services

35.2-35.66/43.2-43.66 MHz/152.030-152.240/152.480-152.840 MHz

154.625/157.740-158.100/158.460-159.700 MHz

B) Cellular Radiotelephone Service

869-894 MHz (824-849 MHz mobiles)

C) 454 MHz Air-Ground Radiotelephone Service

454-455 MHz (459-460 MHz mobiles)

D) 800 MHz Air-Ground Radiotelephone Service

894-896 MHz (849-851 MHz mobiles)

6) Offshore Radiotelephone Services

157.200-157.400/161.800-162.000 MHz/AMTS 216-220 MHz

7) Satellite Mobile Services

137-138 MHz NVNG (148-150.050 uplinks)/399.9-400.050

1525-1559/1610-1660.5 MHz

8) Personal Communication Services (PCS)

901-902/930-931/940-941/1850-1990 MHz

So there you have it. The above listed frequencies would have to be removed

from new scanners being made prior to the type acceptance of any new

scanner. Existing models would have to be decertified then recertified to

prove that the new illegal to listen to ranges couldn't be received (the

AR-8000 syndrome). This is the situation we have today with the cellular

bands and it would now be expanded to the commercial mobile radio service if

HR 1964 is passed.

Ladies and Gentlemen I think you can see this is a serious threat. If you

don't get involved this time in stopping this legislation, you will see the

hobby of scanning listening cease to exist in the very near future. Get off

your rears and write your elected representative right now. This potential

new law is in the House Commerce Committee right now. Let's kill it before

it gets to the floor of the House and it becomes law.

Please give this message the widest possible circulation. Only numbers of

voters will overcome the millions that our elected officials have taken in

campaign contributions and will get this insanity stopped.

I will have updates as they become available and keep a watch at

www.grove.net and the scanner discussion forums as new info is available.

73 to all and let's start writing/faxing today,

Larry Van Horn, N5FPW

Hello,
I need help, I have a Sony AIR-8 that needs a new CF01. The part is
labeled
10.7 and has only two leads. I believe it is a 10.7 MHZ ceramic resonator
but I can not prove it. Also if it is a 10.7 resonator where can I get a
replacement?
Thanks
Dave

In my area when a public service officer ask dispatch for a land line the
officer is expecting dispatch to call him on the normal everyday telephone.
If the officer does not tell dispatch an phone number dispatch calls the
officers home phone number.

How about the new cordless phone freqs? Since it scans 800-912 so it
will only get a portion of the "new" cordless freqs right?

How is that not durham's defense it clearly says on there web page that
it is illegal to import and they will not be held responsible, and all
durham has to do to provide proof is fax a copy of the U.S.law regarding
the importation of cell capable scanners to the credit card company!!

The restriction does apply only to the U.S., but many of the scanners
sold in Canada come from the U.S., thus are blocked. You can purchase
unblocked scanners off the shelf, but you have to look around. In
other words, avoid Radio Shack.

Cell mod for BC235 Truck Tracker? Brother, are you in for a rude surprise! This cracks me up, really. I don't know how many times people buy a scanner and then after the fact, ask if it is cell modifiable. Seems that if you want to eavesdrop on other people's phone calls, you oughta at least figure out what you need before you shell out $200-$300-$400-$Etc.

The main point here is that it would be unfair to try to use the good
protectection regarding credit card purchases that consumers have, to
try to let Durham take the rap for the US Customs confiscation of the
scanner.
It is in no way Durhams fault that it is illegal to import cell-capable
scanners.
If vendors were to bear the risk of loosing money everytime the shipped
a scanner that can not legally be imported, some vendors might stop
this service, or at best let other customers pay for the risk via raised
prices.
I find it quite acceptable that people try to circumvent the
anti-cell-scanner laws by importing, but they know very well what they
are doing and should be taking the economic risk themselves.
It's unfair to try to pass it on to the dealer or the card company,
when the dispute is between the purchaser and the US
Customs/FCC/Congress.

Regards

Peter

Zack,

I agree with you. The fact still remains that the FCC approves Scanners & Amateur Radio for there receive capablilties but then other the hand makes Laws prohibiting what they have just approved, ILLEGAL to monitor.

I had a interesting conversation with the FCC several days ago they told me that when they pass the Law Banding the Monitoring of Cordless Phones that my Kenwood TS60 $1200.00 and my Stamdard Tri Bander 5900 $850.00 will be illegal to Posess because of the receive capabilities in the Cordless Band. I asked if they wanted to buy them back from me. They answered as so many to "just don't tell anyone that you still have these radios-similar to owning a unregistered handgun"

Think about it!!

This is something else I don't understand, you were a deputy sheriff, correct?....You here to fellows transmitting that you know to be fellow workers, yet you figure it's a radio transmission, even though you should have been well aware of the radios your department uses.
Second of all, you say it's an unprofessional, degrading conversation, yet you still assume they're using a radio......even though we're all aware of the lack of privacy on radio system.

If you ask me, they should have charged you with an additonal charge,.......FELONY STUPIDITY.

Hate to pop your bubble, but you are wrong. The section 705 of the 1996 Communications Privacy Act regarding the dissemination of conversations extend beyond just Cell Phone conversations.

Ed

Depends on which "new" cordless frequencies you are attempting to receive. The 25 channel cordless phones utilize frequencies in the 43-45 MHz range; the 900 MHz cordless phones transmit in the 902-928 Mhz range. But a scanner that receives the 900 MHz band will be of little value for monitoring signals from cordless phones in the 900 Mhz range, as most (if not all) 900 MHz cordless signals are digitally encrytped, which makes their signal sound like white noise on an analog scanner. But all of the new cordless phones which transmit in the 43-45 MHz range can be received with an analog scanner, except for the high-end units which have a speech inversion circut, and even those phones can be heard "in the clear" by using Ramsey's decoder to unscramble the signal.

I've smelled fish-shit from the start of this trial by supervisors...guilty.

at first, get on the band-wagging tail and hang on

then when no press accounts were mentioned nor referred to then the smell began to flow...

it sounds like someone trying to write a story and cannot get it and is playing the tune here so we will give him his "I got it" and then completed he goes on to make the movie and makes big bucks....do we get a credit line in the movie?

so much written that just does not add up to two....

hey fellah this alleged happening: what is the police report number and what jurisdiction arrested you? It's a matter of record for you so publish it. Arresting officers and more.

Got the balls, let's walk the walk....

bill conduit
etc.

You'd be suprised how many out of the way Radio Shack stores have
pre-1994 scanners. I just bought one 3-4 months ago. The key is "out
of the way." The mall and other high traffic stores are not likely to
have one, but the others? You'd be suprised!

Barry

Yeah! Paul, you stupid ass...you deserved to be arrested for not handing over your ham license to the officer in the first place. And why did you ask for a second officer at the scene? Didn't you trust the first officer? There is no such thing as police brutality--what were you thinking? The officer could have beat the shit out of you and let you go, and you would have been home at a reasonable hour. But NO, you screwed up his night by calling in a third party--dumb ass!

Finally, Paul, didn't you know that in the state of Michigan, you can be charged with a misdemeanor for sticking up for your rights? People get thrown in the slammer for requests like that! Next time keep your mouth shut and just bend over for the nice officer and let him finish his job.

HIS problem is that his scanner runs off NINE volts. Not TWELVE.

NO, you DONT want to connect your scanner directly to your vehicle's system. Charging voltages range from 13.5 to 15 volts.

Remember, when you get the smoke out, you cant put it back in!!

Get the correct adapter at yer local Rat Shak. #270-1560 I think.

1796. AC to AC?

Newsgroup: rec.radio.scanner
Date: 1997-07-19 00:00:00 UTC
From: fkenn@{NOSPAM}airmail.net
Message-ID: <AA2940E95D406BCF.7A79EE26B4446770.3C1C5CF9A703DD53@library-proxy.airnews.net>
Source record: 191213

I'm sure this issue has been addressed on this newsgroup. But since I cannot find any answer via web searches, etc., I have to ask this here.

The Radio Shack Pro-2034 scanner has been discontinued and has been sold at a substantial discount at a few RS discount outlets. I picked one up, thinking it might come in handy as a scanner for car use. But, the scanner uses an AC to AC converter, Model #20-411, which takes AC 120 volts and converts the voltage to 10 volts at 300 ma for the scanner.

Is this the way these devices have gone? I assumed that many devices such as this were running DC.

Also, is there a converter available so that one can run this scanner off an automobile DC cigarette lighter outlet? I assume not, but I figured I had better ask this, just in case someone has already been down this path and found a solution.

Many thanks in advance.

(I have read the threads related to scanners in cars and how one should hide them and be as discreet as possible....)

>I requested a Federal US Marshall to the seen, because I WAS NOT about to
>surrender my FEDERAL license to the officer, however I did show it to him
>as I held it, but did not give it up until the Marshall arrived]. I then

And here is where stupidity got you into trouble. Would it not have
been easier just to show your license to the officer? Most likely,
you would have walked at that point.

>looked like. They in turn called LT. ZORZA [who, BTW, heads our RACES
>group] from the Sheriff's Department and he stated he believed that the
>RACES card was the proper form. I then gave the scanner back and released
>the suspect [by now it was about 7AM--they held me in the holding-room for
>the entire evening, against my will]." Signed Officer D. Willey.

Sounds like the good Lt Zorza wanted no part of you at that point.
Probably figured that if you had pushed matters this far, it was
tough.

>Like I said before, I treated the officers with respect and not only that,

No, you did not. You got the ass about you, and prolonged a simple
traffic stop into something that took far too long. Simply showing
the license to the officer, so that he could verify that you were
a HAM operator, would most likely have ended the situation
there.

>I was wearing I shirt and tie that evening, and I am well groomed with very
>short hair, so I did not LOOK like a punk. So there was no reason for them
>to be suspious of me.

The fact that you were unwilling to show the officer your HAM ticket
was MORE than enough for him to be suspicious of you.

>"12-29-88, 11:00 AM Mr. Racine was arrested on a valid misdemeanor warrant
>for possess police radio, receivers, scanners. He posted the $50:00 cash
>bond and was released after being printed [and photographed]." Signed
>Officer G. Sibley.

Charged with this, seeing as Criminal Stupidity is not chargeable in
many areas....

>So, you see, this IS the truth! My charges were dropped during the first
>week of February (I thought it to be closer to the end of the month, but I

>was wrong). This is AFTER my attorney send correspondence to the courts
>asking what validated my arrest. I paid for the attorney.

Jus think how much money you would have saved by just showing the
officer your license like he asked in the first place!

It was always my understanding that landline calls are just that: calls that are made via lines (read: wires) that fixed upon or in the ground. This means regular telephone calls. That would definitley explain why would hear no ensuing patch-type conversation on your receiver. Police and other agencies generally do this to maintain a little privacy, when needed.

Bob the use of a .45 is not a reasonable responce. Roving bands of
maimed officers lashing out in pain os a cause of concern. Here in
Wyoming is a small town where the .454 Casaul is produced. Wounding
is no longer an option as a near miss will kill a bus load of
gang-bangers , and the bus. Notice we aint got those here any
more?Always the right tool for the right job. Rollo.

>"Beware of the massive impossible!"

One thing again...there is a story here for the TV people
to go into for you.

nuther thing: They come after you because you are safe..

that's it. these cowards who work these jobs come after
you because you are an easy-to-find target, pose no threat
to their safety and it's a good training exercise in breaking
into domiciles...

skirting the "be safe in one's domiciles from unwarranted
search and >..." Being a federal law that they are breaking,
then are they not subject to being prosecuted by the FEDS.

Gee. the feds go after the native american indians for smoking'
Peote as a crime only second to pissing on the grave of
J EDgar....

People who don't break the laws murdering people and bombing
buildings in the name of some freak or killing people in a
mass-ritual, they get arrested the easiest. It's simple: just
pick someone out who is an irritant and invent the scenario
and get supervisor to ok it...and they go to it....

One thing: where was the Press in all this? If this really
did happen, why was not the press given the facts and let them
go after the authorities who are in violation of federal laws.

question mark.

Who did not invite the Press?

bill conduit
etc.

something is wrong with this story....missing some thing.

> Thanks, Sean Brooks

A "land line" is just a silly term that means "the telephone". I know it gets confusing when people have to come up with different words and slogans for words that we allready have! When someone sais: Call me on the "land line" they mean: Call me on the phone. Stupid huh? Just like some Ham radio people like to tell someone "73" instead of just saying "goodbye, best wishes, or whatever" . I prefer to use regular everyday english when I use the radio. I also never order "biggie fries" when I go to Wendys, I ask for LARGE fries.

In a way I guess you are correct! It doesn't really matter what the
Laws ARE or what they STATE, The government will do what it wants, and
unless you use the press to nationally carry your case, no one will
care. The constitution guarentees me the right not only to OWN arms,
but to bear them as well, However the government wants me to have a
"permit" to own, and won't let me carry at all! This proves your point,
that the law doesn't really matter. The US Constitution is a big piece
of worthless shit that is void and prohibited. In some places, (My
friend lives in Chicago,..) It is allready ILLEGAL to just OWN a gun!!!
Yet the "law" (The US Constitution, A FEDERAL LAW) states... well you
get the idea.

You made a good point!

A point that needs to be told to these yahoos compaining about scanner laws. A license to have a scanner still does not absolve you from acting like an idiot. One guy waits for a federal officer?....a true bafoon..., All these Hams getting stopped for scanner possesion?.....
I am led to believe that perhaps an inappropriate number of hams are arriving on crime scenes.....Although you may have the scanner for ham purposes, I still don't believe you're allowed to listen to police calls in the mobile. So how is it you guys keep tripping upon all these police officers? Com'on now, bite the bullet, tell the WHOLE truth, and get it over with. I was in this situation once too. But at least I had the balls to say I had some responsibilty in the matter. I wasn't even a ham, and all they did was write an appearance ticket....no arrest...
perhaps that was because I didn't take that oh-so-typical holier-than-thou attitude some hams take.
My case was dismissed.

I just bought a OS456 Myself and am a bit disappointed with all of the demos I have tried over the past 3 days. Importing stuff and puting them in banks really seems to be a big pain, there must be a easyer way! So far none of the demo programs that I have tried interests me enough and I am a bit disappointed.

I found a PROBE website but it belongs to a fan of the program (nice to see) does Probe have it's own website ? Is there a demo version of the program to try out ? I am not going to shell out $85 for a program I have not seen, moreso based of everything I have seen so far!

Please remove nospam from my reply e-mail address for your replies.

>public safety information is rampant.

Bullshit. This guy needs to talk to some professional public safety
organizations, like APCO and NACOP.

>At least three times a year we have some enterprising ham, with illegally
>modified 2 meter equipment jump on our channel and tell us all about his

Ham? With license? What's his callsign? How does this goof keep
getting onto the police channels "at least three times a year" without
getting caught? If he's a licensed ham, his home address is a matter
of public record.

If he means three different hams every year, then his agency is
worthless as a law enforcement entity. No police agency that I have
ever encountered would allow itself to be abused in that way on a
regular basis. There would be some high-profile busts and
prosecutions to discourage the copycats.

In sum, though, I don't believe any of it. If this guy is a real cop,
he's one of the few real dumb cops that we all encounter from time to
time, despite the top-notch training and professionalism that most of
them display.

Yo, blu (blun?)
A couple of things come to mind. Is the scanner housing plastic or metal? If you remove the antenna, does the noise drop or disappear?

Have you tried running a remote antenna to the scanner, in case the sweep oscillator in the monitor (the likely culprit in this case, I believe) is being transmitted to the scanner via the antenna? If that doesn't help, how about just an external speaker from the scanner, which would live in a different part of the house, and a volume pot on the speaker? Sorry, but usually separation from the source of the RF noise is the only way around it. HTH, your mileage may vary.

Why would anyone use 75 ohm coax on a 50 ohm connection on a
scanner or cb.

Use RG-8 or 58 for a short run, but don't use 6 or 59, unless
you use some kind of balun.
They WILL work, but you have a lot more loss than using the
right stuff to start with.

And if you are standing in a crowd having a conversation with a friend in normal speaking tones, would you expect everyone within hearing distance to not listen?

If you had a personal, note for a friend would you nail it to a telephone pole and expect everyone walking by to not read beyond the greeting line?

Should the free world go to jail for the part that electronic eavesdropping played in their winning the cold war? And why should a government that listens in tell us to not do it?

I don't intend to flame you, but think it through logically. It makes great sense to not put yourself in a situation to be eavesdropped on it you do not want that to happen.

1852. Scannists Interfere With Manhunt

Newsgroup: rec.radio.scanner
Date: 1997-07-20 00:00:00 UTC
From: "Peter M. Baran" <pbaran@hmtnet.com>
Message-ID: <5qtgc7rpo1@f02s02.tac.net>
Source record: 190820

I caught the tail-end of a news story, a couple of days ago, that probably won't do our hobby a whole lot of good.

Anybody that watched "America's Most Wanted" on Saturday night would have seen the item regarding a triple homicide near Kitimat, British Columbia, Canada, that occurred last week. The alleged suspect is still at large, & a massive manhunt is taking place in the heavilly wooded area surrounding the scene.

I happened to be listening to a Vancouver, B.C. radio station on cable two days ago, regarding this incident, when I heard the word "scanner" pop up. From what I can gather, every time the police get a new tip or lead, they are apparently not the only ones responding to the calls. The police have been complaining that whenever thay arrive to investigate new tips, they are met with several people that have heard the dispatches on their scanners! I don't know if these are local "vigilantes", or just "rubber-neckers" hoping to get a first-hand glimpse of some action. I do, however, know that it probably doesn't do this hobby any good, if people are actually getting in the way of a police investigation. Being a scanner enthusiast for more than 20 years, I know all too well, the urge to go out, in hope of seeing that big "bust". What scares me, is the fact that news items like this tend to put the scanning hobby in a bad light, & cause some "officials" to feel obligated to take action against something that they probably know little about. We only have to look at the USA, to see what type of reaction this kind of publicity can cause.

I live several hundred miles from Kitimat, so I have obviously not heard any first (or second) hand accounts of what type of reaction this particular news story has caused in the immediate area. If there is anyone here from British Columbia, I would be very curious to hear anything that you may know about this particular situation.

From: bud.jamison@thekat.cts.com
Message-ID: <9707201940451110@thekat.cts.com>
Source record: 190824

-> Cellular Monitoring, Recording and Deluging ONLY pertain to CELLULAR
-> DESIGNATED IN PART 22 OF THE REGULATIONS. The Frequencies are listed
-> in SECTION 22.905 (860-896MHz). THERE ARE NONE IN THE 902-928MHZ
-> RANGE THEREFORE THE REGULATIONS REGARDING MONITORING, RECORDING AND
-> DEVULGING-DO NOT APPLY.....

You, and he (your supposed source for this mis-information) apparently do NOT realize that that section is NOT the only one concerning monitoring things. Cordless phones (ALL of them, from 1.6 mhz to 900 mhz) are also outlawed from monitoring, AND the Communications Act of 1934 was the law that made taping or divulging illegal, LONG before the Electronics Communications Privacy Act of 1986 made cellphones illegal to monitor (the FIRST time any radio band had been designated so in the U.S.), which was later amended to add cordless phones.

1857. Re: Scanner, Amateur Radios & Receivers.

Source record: 190825

-> #1. Amateur Radio Operatrs. are being arrested under Part 95 (CB Regs
-> Local Police.
->
-> #2. Amateur Radio Operatrs. are being arrested for Interference on
-> Neighborhood Cordless Phones.

IF (and that's a BIG if) any arrests were made, the charges would QUICKLY be dismissed, since no LOCAL laws were broken, AND the local jurisdiction does NOT have authority to prosecute on anything related to FCC regulations. The FCC can't even arrest you for those things, they CAN fine you, but through administrative channels, NOT thru Federal Court.

-> #3. Amateur Radio Operatrs. equipment is being confiscated on normal
-> traffic stops.

That COULD happen, but it would be a simple task to bring a copy of the FCC rule that exempts Ham Radio equipment from local scanner regulations. If it's not released at that time, a lawsuit for BIG bucks would usually be easily winnable.

-> #4. Scanner Buffs are getting the bone by the FCC and Privacy Acts.
->
-> Sit down some time and make 3 columns-on the first column list your
-> scanner and the frequence coverages down the column-on the top of the
-> second column list the frequencies (check all the FCC regs & Privacy
-> Acts and etc. you can find)
-> that are ILLEGAL to MONITOR-on the top of the third column list the
-> frequencies that LEGALLY you can monitor-not much left is there?
-> Actually you mays well use your scanner as a paper weight.

Apparently YOU haven't done this. The ONLY things you can't listen to currently are cellphones (2 sections of the 800 mhz band) and cordless phones, whereever they may fall.

-> #6. What are you Scanner Buffs going to do if you do not know
-> already that the Scanners you have that are Modified for Cellular
-> Phones or Manufactured prior to 1994 without the Cellular Blocks
-> carry a $10,000.00 Federal Fine!! Ya that is correct just put on the
-> books in February 1997-buddies..

Bullshit, NO such law exists. if you can prove it does, I'll EAT my computer.

-> Here is a qoute and the exact regulation from the FCC-ie. THE BUBBLE
-> BUSTER AUTHOR----Cellular monitoring, recording and devulging ONLY
-> pertian to Cellular Bands designated in Part 22 of the regulations.

-> The frequencies are listed in Section 22.905 (860-896Mhz). THERE ARE
-> NONE IN THE 902-928MHz range therefore the regulations regarding
-> monitoring, recording and devulging DO NOT APPLY-This a quote from
-> the FCC-If I had a Scanner for my Computr. I would post the letter...

YOU better learn to find the laws on your own, your source is WRONG,
WRONG, W R O N G !!

1858. Re: THE FACTS-ARRESTED FOR MONITORING THE 902MHz BAND.

Newsgroup: rec.radio.scanner

Source record: 190826

-> I could fill your spooler with Or Maybe---s

Or you COULD quit being such a dumbass.

-> I just want one of the know it alls to forward the specific law that
-> pertians to Cellular when they are heard out of band. Are you
-> responsible-no you are not-and I will receive non-because they don't
-> exist!!

The law does NOT specify WHERE you can't monitor cellphone calls, It JUST says that knowingly monitoring them is ILLEGAL. Same with cordless phones. SO, if you're in a band where you are legal (such as the 900 mhz ham band), AND it also happens to be shared with something like cordless phones, you better be DAMNED sure you know WHAT you're listening to before you start talking about it to someone else.

As Ross Perot is so fond of saying... "It's THAT simple!"

-> it is capable of receiving Cordless Phones. Call the FCC and ask
-> them-after these laws are past for instance- owning Scanners that
-> are Manufactued prior to 1994 are illegal if they are capable of
-> receiving Cellular $10,000.00 Federal Fine.

You are full of shit, and should take your own advice and call the FCC. Make sure you get the EXACT U.S.Code section number with that law in it, so you can PROVE to us that you know at least a little about what you're posting.

1860. ARRESTED and/or BANNED

Newsgroup: rec.radio.scanner
Date: 1997-07-20 00:00:00 UTC
From: Mad Scanner <madscanner@hotmail.com>
Message-ID: <5qtgde$t17@dfw-ixnews3.ix.netcom.com>
Source record: 190996

Granted, most of these posts are trolls. But when it came to the gentleman arrested for having a scanner regardless of ham license, HR 1964 proposed by Edward Markey D-MA, and the cordless frequency ban currently being drawn up by the FCC, it appears that we're seeing the beginning of the end of our hobby. I think that it is perfectly safe to say that in a relatively short time it will be illegal to monitor anything other than low level police and fire services. Of course, under an oppressive and unjust government like the one ours is starting to become, nobody will actually obey these laws. There are a million laws on the books that I nor 99.9% of the population pay any heed to simply because they are unfair and were only created on behalf of either electoral appeasement or corporate bribery (HR 1964 being a superb candidate for the latter).

Nevertheless these laws continue to empower the government to arrest and imprison its citizens for a growing number of infractions, and are making the common activities of yesteryear into "shameful" activities that one can only do while hidden away in the privacy of their own home. How long is it going to take before people do something about what this government is slowly doing to us? I know that it's not bad now, but it's much worse than it used to be and will only continue to become more and more crushing and besetting. It's simply a matter of doing it slowly. Many people easily forget this kind of stuff because it's brought to their attention along with a saturation of other information received through the internet, the news media, etc. Simply put, how can one remember it all? I think that the scum who draw these laws are using simple delaying tactics, pushing one through at a time amidst a bombardment of other infotainment. After all, at any given time Joe Shmuck'll just say "Eh, it's just ONE law, what can it hurt?" Accompanied by the convincing lip service politicians make their profession to spew, they can set anything up to sound in the public's own interest when trying to pass a bill.

Maybe people would be pleasantly surprised if they just marked August 1st as the day to start keeping a list in which they noted each new equitable and unreasonable bill that came along, highlighting those that actually became law. In a year's time, they'd be taken back by the number of freedoms lost for reasons no better than appeasement, political correctness and profit. Being that nobody cares about quality, maybe the quantity will light a fire under peoples' asses about the crap being blindly shoved down our throats every day. I hate to sound even more like a loon as I can already imagine the bombardment of self-professed realists that will come down on this article, but those once-nutty books like Fahrenheit 451 are going to become more and more realistic as the government continues to strip us of one freedom after another.

The next fifty years will disappear just as fast as the last fifty did, and by then who knows how many things now considered normal activities will be outlawed then. Do you think it could be possible that in 50 years so many things will have been outlawed that we'll be confined to our homes on a mandatory curfew schedule, ordered to sit on our asses and absorb tons of propaganda off our televisions like mindless sheep? Could easily be. Many people already do it today voluntarily. It's a scary thought, but anything is possible when approached gradually.

One way of looking at it is through comparing the gun control issues of today to 100 years ago. If you told someone back then that they couldn't do this and that with their gun (aside of the very basics such as murder and so forth), they'd probably bury the end of a shotgun in your chest, kindly ask you to get out of their face, and laugh you off as you walked away with your tail between your legs. But today people can hardly even own a gun. If you can, you're risking a prison sentence if you also have children in the house, you will be slapped with a murder rap if you shoot a burglar, you can't so much as take it outside with you, ad nausea. In another 50 years you won't be able to own any guns other than the most decrepit, inferior pea and BB shooters; and *they* will most likely in turn be regulated like morphine. And of course, people will be persuaded to let go of their rights through appeasement and propaganda, such as by using crime as an excuse to rid citizens of their guns. Realistically anything anti-gun opponents say is bullshit, as I could just as easily cave your skull in with a socket wrench as I could blow it apart with a gun. The only difference would be that one of the tools would be illegal while the other is not. Anyway, this is just an analogy; guns and gun control are off topic to this newsgroup, but it does stand to prove a valid point. It shows how people have given up a certain form of rights over time and will very likely continue to do so until said rights are completely gone. Scanners will fall into this same trap too; politicians will take money from Motorola, they'll spew propaganda and brainwashing tactics to the media who'll in turn toss it to the public, convincing them that Scanners are the footstool of Lucifer Satan himself, and will vote them out of existence in the next elections.

Where does it stop? Do we simply allow the powers that shouldn't be to take our toys away and over time turn us into nothing more than prisoners in our own homes chained to our TV sets?

Okay, I'm done. All the traditionalists afraid to accept ideas that do not conform to their practical beliefs can now flame this post, add their subtle little jokes ala "[excessive babble snipped]", etc. and profess to the rest of the group what kind of crackpot I am. These are only things to keep in mind. I'm not about to say this is how our government is, but merely that it looks to be headed in this direction. Just like any of the numerous diseases which can affect the human body, the only way you have a fighting chance in hell to get rid of it is to catch it early.

Mad Scanner

Their you go again. Making all kinds of mistakes, or downright lies.
Part 22 of the FCC rules, deal with the "Public Mobile Service" or
commonly refered to as Cellular. It is the rules regarding the
establishment of, and technical standards for, licensees in the Cellular
Telephone business. And, by the way, 860-868 is in many places used by
public saety two way radio, and simply can be monitored. As for part
22.905, uh, my part 22 only goes to 22.600, must have been one of them
their stupid FCC guys you talked to! By the way, you are on the net,
next time, go to the several free areas where you can actually look at
the rules, but you really need a copy of the Communications Privacy Act.

I have my scanner approximately. 2 1/2 feet away from my monitor. When ever my monitor is on, I get a lot of interference in the 30 mhz to 50 mhz range. In a poor attempt to block the interfering signals, I put up an aluminum shield between my scanner and monitor, made from regular aluminum foil. heh, this did not work, but it does look sort of cool.

I can't move the scanner far away from the scanner (there is no where else it can go and be useful) and I can't move the computer either. I was wondering if there is anything I can do to block this interference?

Only an idiot would place a private message, open faced, on a bulletin
board in the town plaza. Why do these cellular user think that broadcasting
their private conversations in the clear is any different?

Why: Because the Cell Phone industry told them so.

Yeah, I should spend $2 for a brochure from some outfit I've never heard of when there are so many well known and much better respected ones to deal wit? Those companies, I might add, don't post their commercial messages here either.

For Sale:

AR8000 scanner.

It's an original UK model (completely uncut from the factory), that's in good condition. I have the original box, manual, antenna. The ac adapter is a UK version, so ii wouldn't do you any good.

First $500 takes it, and I'll include overnight UPS COD delivery.

Sorry, I was wrong, I forgot to look in my revisions section to part 22. There is a Part 22.905, but it is simply a technical standard page for the channel assignments by "A" system or "B" system, which, by the way, do start at 869Mhz. It does not have anything to do with the Privacy Act, or the Telecommunications Act.

Those who would like to check out these guys "facts"

Try linking to:

http://frwebgate.access.gpo.gov/cgi.bin/get-cfr.cgi

Government Printing Office texts of all Code of Federal Regulations, like CFR47 Part 22.905. The Acts are also available, and you can see if you can find anything like "monitoring cellular phone calls on the frequencies allocated in CFR 47 Part 22.905". Them darn broadband "amateur" radios just can't seem to keep those IF Images where they belong.

SO sorry Rev Tweek (D), but there are differences that make a
difference.
LET ME ASK YOU TWEEK: WHO PASSED THE BRADY BILL?
WHO PASSED THE ASSUALT WEAPONS BAN?
WHO REMOVED RADAR DETECTORS FROM 18 WHEELERS?
WHO IS USING THE EPA TO GO AFTER PERSONAL
PROPERTY RIGHTS?
WHO JUST BANNED USAGE OF GASOLINE POWERED YARD
BLOWERS?

ANSWER: THE CLINTON ADMIN/ DEMOCRATIC PARTY.

wake up and smell the coffee Tweek,
Democrats like to BAN things.

OHHH, and who was controlling congress in 1986 when the ELECTRONIC
COMMUNICATIONS PRIVACY ACT was passed? You GOT IT! DEMOCRATS!

FS- UBC 3000XLT Cellular enabled scanner $350 shipped

Uniden BearCat 3000XLT handheld scanner. Full scanning range from 25MHz to 1.3Ghz. Covers every band from 25MHz.

Frequency Range: 25 to 550 MHz
760 to 1300 MHz (includes cellular band)

Has EVERYTHING the U.S. Model does except for push-button weather (Wx).

* 400 Channels/20 Banks
* 10 Priority Channels
* TwinTurbo Search & Scan (100 ch/sec. Scan & 300 steps/sec. Searching)
* Selectable Attenuator
* Automatic Store
* Automatic Sorting
* Battery Saver Mode
* Channel Lock-out
* Rechargeable Ni-cad battery
* Original box with English AND German manual

Scanner is in excellent condition. Looks as if it's brand new. Only 3 months old. I'm selling it because I recently got my amateur radio license. Now I can listen and talk too! I will also include the following "extras":

(1) Leather Carrying case ($25 value)
(1) Extra Battery ($35 value)
(1) Collapsible antenna (better than rubber duckie for cordless phones)
(1) Original European charger
(1) UBC 3000 "secrets" list (cool tricks for scanner)

Let me know if you have any other questions. The price is $350 shipped if you pay in advance. Otherwise, add COD and insured shipping charge. Please feel free to e-mail me with any questions or offers. Please e-mail offers to: mnicolia@greenapple.com. Thank you.
